Participation and performance of children with disabilities on statewide assessments:

3A. Has District met the state's AYP objectives for progress for disability subgroup?

3B. Participation rate for children with IEPs in statewide assessments.

3C. Proficiency rate for children with IEPs against grade-level standards and alternate achievement standards.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 3A	Assessment -- Meeting AYP Objectives	*	*	*	*	*	*	*
Indicator 3B	Assessment -- Participation Rates	12	12	1 (100%)	0.75755	1.00003	0.98 (98%)	Met
Indicator 3C	Assessment -- Proficiency Rates	*	*	*	*	*	*	*

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0057 Red Lodge H S

INDICATOR #4 - Suspension and Expulsion Rates

Districts who have been identified as having a significant discrepancy in long-term suspension and expulsion rates.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 4A	Suspension and Expulsion Rates	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

OPI School Discipline Data Collection reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The assessment of a school district's performance based on long-term suspension and expulsion rates is done by comparing the suspension and expulsion rates for students with disabilities to the long-term suspension and expulsion rates for nondisabled students. Long-term suspension or expulsion is defined as a suspension or expulsion that results in removal of a student, out-of-school, for greater than 10 school days or a student with multiple short-term (10 school days or less) out-of-school suspensions or expulsions that sum to greater than 10 school days during the school year.

For each racial/ethnic group, a statistical test of the difference between proportions is conducted to determine if the size of difference between the school district's special education long-term suspension and expulsion rates and the long-term suspension and expulsion rates for regular education students in the school district is statistically significant. In our comparison of long-term suspension and expulsion rates, we have set a .05 level of significance. This means, we are 95 percent confident that the differences between the rates are real (significant) and not due to random factors. However, the precision and reliability of this method is dependent upon having a large enough sample size to be representative of the school district's population and so, we also employ a minimum sample size (minimum N) of 10.

If the difference between the long-term suspension and expulsion rates for students with disabilities and the rates for nondisabled students by race/ethnicity group is statistically significant for a specific school district, the school district is flagged for additional investigation to determine if a significant discrepancy is occurring in the rates of long-term suspensions and expulsions of students with disabilities in a school year. This includes validation of the school district's long-term suspension and expulsion data and a systematic review of complaints/mediation/due process information, compliance monitoring and program data.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0057 Red Lodge H S

INDICATOR #5 - Education Environment Rates

Percent of children with IEPs, aged 6-21,

5A. Removed from the regular class less than 21% of the school day.

5B. Removed from regular class greater than 60% of the day; or

5C. Served in public or private separate schools, residential placements, or homebound or hospital placements.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 5A	Education Environment Rate -- Reg Class > 80% of day	16	0	0 (0%)	0	0	0.5 (50%)	Not Met
Indicator 5B	Education Environment Rate -- Reg Class < 40% of day	16	3	0.19 (19%)	0.02183	0.70404	0.12 (12%)	Met
Indicator 5C	Education Environment Rate -- Sep Schls	16	0	0 (0%)	0	0	0.018 (1.8%)	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0057 Red Lodge H S

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0057 Red Lodge H S

INDICATOR #12 - Children Referred By Part C

Percent of children referred by Part C, prior to age 3, who are found eligible for Part B, and who have an IEP developed and implemented by their third birthday.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 12	Children referred by Part C	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI Compliance Monitoring

Indicator Data Note:

NA = Data not available as district was not monitored in the year in which data is being reported.

District performance for this indicator is only for districts monitored in the year in which data is being reported. The OPI reviews a sample of student records as part of its compliance monitoring activities to determine if children referred by a Part C Service Provider Agency have an IEP in place at the age of three. A review of student records is to identify noncompliance issues with respect to 34 CFR 300.111 Child Find or 34 CFR 300.124 Transition of children from the Part C program to preschool programs.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0850 Reed Point Elem

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0850 Reed Point Elem

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0850 Reed Point Elem

INDICATOR #3 - Statewide Assessments

Participation and performance of children with disabilities on statewide assessments:

3A. Has District met the state's AYP objectives for progress for disability subgroup?

3B. Participation rate for children with IEPs in statewide assessments.

3C. Proficiency rate for children with IEPs against grade-level standards and alternate achievement standards.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 3A	Assessment -- Meeting AYP Objectives	*	*	*	*	*	*	*
Indicator 3B	Assessment -- Participation Rates	*	*	*	*	*	*	*
Indicator 3C	Assessment -- Proficiency Rates	*	*	*	*	*	*	*

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0850 Reed Point Elem

INDICATOR #4 - Suspension and Expulsion Rates

Districts who have been identified as having a significant discrepancy in long-term suspension and expulsion rates.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 4A	Suspension and Expulsion Rates	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

OPI School Discipline Data Collection reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The assessment of a school district's performance based on long-term suspension and expulsion rates is done by comparing the suspension and expulsion rates for students with disabilities to the long-term suspension and expulsion rates for nondisabled students. Long-term suspension or expulsion is defined as a suspension or expulsion that results in removal of a student, out-of-school, for greater than 10 school days or a student with multiple short-term (10 school days or less) out-of-school suspensions or expulsions that sum to greater than 10 school days during the school year.

For each racial/ethnic group, a statistical test of the difference between proportions is conducted to determine if the size of difference between the school district's special education long-term suspension and expulsion rates and the long-term suspension and expulsion rates for regular education students in the school district is statistically significant. In our comparison of long-term suspension and expulsion rates, we have set a .05 level of significance. This means, we are 95 percent confident that the differences between the rates are real (significant) and not due to random factors. However, the precision and reliability of this method is dependent upon having a large enough sample size to be representative of the school district's population and so, we also employ a minimum sample size (minimum N) of 10.

If the difference between the long-term suspension and expulsion rates for students with disabilities and the rates for nondisabled students by race/ethnicity group is statistically significant for a specific school district, the school district is flagged for additional investigation to determine if a significant discrepancy is occurring in the rates of long-term suspensions and expulsions of students with disabilities in a school year. This includes validation of the school district's long-term suspension and expulsion data and a systematic review of complaints/mediation/due process information, compliance monitoring and program data.

For School Year: 2005-2006

District Name 0850 Reed Point Elem

INDICATOR #5 - Education Environment Rates

Percent of children with IEPs, aged 6-21,

5A. Removed from the regular class less than 21% of the school day.

5B. Removed from regular class greater than 60% of the day; or

5C. Served in public or private separate schools, residential placements, or homebound or hospital placements.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 5A	Education Environment Rate -- Reg Class > 80% of day	*	*	*	*	*	*	*
Indicator 5B	Education Environment Rate -- Reg Class < 40% of day	*	*	*	*	*	*	*
Indicator 5C	Education Environment Rate -- Sep Schls	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0850 Reed Point Elem

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

Linda McCulloch, Superintendent

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0850 Reed Point Elem

INDICATOR #12 - Children Referred By Part C

Percent of children referred by Part C, prior to age 3, who are found eligible for Part B, and who have an IEP developed and implemented by their third birthday.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 12	Children referred by Part C	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI Compliance Monitoring

Indicator Data Note:

NA = Data not available as district was not monitored in the year in which data is being reported.

District performance for this indicator is only for districts monitored in the year in which data is being reported. The OPI reviews a sample of student records as part of its compliance monitoring activities to determine if children referred by a Part C Service Provider Agency have an IEP in place at the age of three. A review of student records is to identify noncompliance issues with respect to 34 CFR 300.111 Child Find or 34 CFR 300.124 Transition of children from the Part C program to preschool programs.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0851 Reed Point H S

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

0851 Reed Point H S

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

0851 Reed Point H S

INDICATOR #3 - Statewide Assessments

Participation and performance of children with disabilities on statewide assessments:

3A. Has District met the state's AYP objectives for progress for disability subgroup?

3B. Participation rate for children with IEPs in statewide assessments.

3C. Proficiency rate for children with IEPs against grade-level standards and alternate achievement standards.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 3A	Assessment -- Meeting AYP Objectives	*	*	*	*	*	*	*
Indicator 3B	Assessment -- Participation Rates	*	*	*	*	*	*	*
Indicator 3C	Assessment -- Proficiency Rates	*	*	*	*	*	*	*

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

0851 Reed Point H S

INDICATOR #4 - Suspension and Expulsion Rates

Districts who have been identified as having a significant discrepancy in long-term suspension and expulsion rates.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 4A	Suspension and Expulsion Rates	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

OPI School Discipline Data Collection reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The assessment of a school district's performance based on long-term suspension and expulsion rates is done by comparing the suspension and expulsion rates for students with disabilities to the long-term suspension and expulsion rates for nondisabled students. Long-term suspension or expulsion is defined as a suspension or expulsion that results in removal of a student, out-of-school, for greater than 10 school days or a student with multiple short-term (10 school days or less) out-of-school suspensions or expulsions that sum to greater than 10 school days during the school year.

For each racial/ethnic group, a statistical test of the difference between proportions is conducted to determine if the size of difference between the school district's special education long-term suspension and expulsion rates and the long-term suspension and expulsion rates for regular education students in the school district is statistically significant. In our comparison of long-term suspension and expulsion rates, we have set a .05 level of significance. This means, we are 95 percent confident that the differences between the rates are real (significant) and not due to random factors. However, the precision and reliability of this method is dependent upon having a large enough sample size to be representative of the school district's population and so, we also employ a minimum sample size (minimum N) of 10.

If the difference between the long-term suspension and expulsion rates for students with disabilities and the rates for nondisabled students by race/ethnicity group is statistically significant for a specific school district, the school district is flagged for additional investigation to determine if a significant discrepancy is occurring in the rates of long-term suspensions and expulsions of students with disabilities in a school year. This includes validation of the school district's long-term suspension and expulsion data and a systematic review of complaints/mediation/due process information, compliance monitoring and program data.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

0851 Reed Point H S

INDICATOR #5 - Education Environment Rates

Percent of children with IEPs, aged 6-21,

5A. Removed from the regular class less than 21% of the school day.

5B. Removed from regular class greater than 60% of the day; or

5C. Served in public or private separate schools, residential placements, or homebound or hospital placements.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 5A	Education Environment Rate -- Reg Class > 80% of day	*	*	*	*	*	*	*
Indicator 5B	Education Environment Rate -- Reg Class < 40% of day	*	*	*	*	*	*	*
Indicator 5C	Education Environment Rate -- Sep Schls	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

0851 Reed Point H S

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

OPI Compliance Monitoring

Indicator Data Note:

NA = Data not available as district was not monitored in the year in which data is being reported.

District performance for this indicator is only for districts monitored in the year in which data is being reported. The OPI reviews a sample of student records as part of its compliance monitoring activities to determine if children referred by a Part C Service Provider Agency have an IEP in place at the age of three. A review of student records is to identify noncompliance issues with respect to 34 CFR 300.111 Child Find or 34 CFR 300.124 Transition of children from the Part C program to preschool programs.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0015 Reichle Elem

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

For School Year: 2005-2006

District Name

0015 Reichle Elem

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

0015 Reichle Elem

INDICATOR #3 - Statewide Assessments

Participation and performance of children with disabilities on statewide assessments:

3A. Has District met the state's AYP objectives for progress for disability subgroup?

3B. Participation rate for children with IEPs in statewide assessments.

3C. Proficiency rate for children with IEPs against grade-level standards and alternate achievement standards.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 3A	Assessment -- Meeting AYP Objectives	*	*	*	*	*	*	*
Indicator 3B	Assessment -- Participation Rates	*	*	*	*	*	*	*
Indicator 3C	Assessment -- Proficiency Rates	*	*	*	*	*	*	*

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

0015 Reichle Elem

INDICATOR #4 - Suspension and Expulsion Rates

Districts who have been identified as having a significant discrepancy in long-term suspension and expulsion rates.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 4A	Suspension and Expulsion Rates	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

OPI School Discipline Data Collection reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The assessment of a school district's performance based on long-term suspension and expulsion rates is done by comparing the suspension and expulsion rates for students with disabilities to the long-term suspension and expulsion rates for nondisabled students. Long-term suspension or expulsion is defined as a suspension or expulsion that results in removal of a student, out-of-school, for greater than 10 school days or a student with multiple short-term (10 school days or less) out-of-school suspensions or expulsions that sum to greater than 10 school days during the school year.

For each racial/ethnic group, a statistical test of the difference between proportions is conducted to determine if the size of difference between the school district's special education long-term suspension and expulsion rates and the long-term suspension and expulsion rates for regular education students in the school district is statistically significant. In our comparison of long-term suspension and expulsion rates, we have set a .05 level of significance. This means, we are 95 percent confident that the differences between the rates are real (significant) and not due to random factors. However, the precision and reliability of this method is dependent upon having a large enough sample size to be representative of the school district's population and so, we also employ a minimum sample size (minimum N) of 10.

If the difference between the long-term suspension and expulsion rates for students with disabilities and the rates for nondisabled students by race/ethnicity group is statistically significant for a specific school district, the school district is flagged for additional investigation to determine if a significant discrepancy is occurring in the rates of long-term suspensions and expulsions of students with disabilities in a school year. This includes validation of the school district's long-term suspension and expulsion data and a systematic review of complaints/mediation/due process information, compliance monitoring and program data.

INDICATOR #5 - Education Environment Rates

Percent of children with IEPs, aged 6-21,

5A. Removed from the regular class less than 21% of the school day.

5B. Removed from regular class greater than 60% of the day; or

5C. Served in public or private separate schools, residential placements, or homebound or hospital placements.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 5A	Education Environment Rate -- Reg Class > 80% of day	*	*	*	*	*	*	*
Indicator 5B	Education Environment Rate -- Reg Class < 40% of day	*	*	*	*	*	*	*
Indicator 5C	Education Environment Rate -- Sep Schls	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

0015 Reichle Elem

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

0015 Reichle Elem

INDICATOR #12 - Children Referred By Part C

Percent of children referred by Part C, prior to age 3, who are found eligible for Part B, and who have an IEP developed and implemented by their third birthday.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 12	Children referred by Part C	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI Compliance Monitoring

Indicator Data Note:

NA = Data not available as district was not monitored in the year in which data is being reported.

District performance for this indicator is only for districts monitored in the year in which data is being reported. The OPI reviews a sample of student records as part of its compliance monitoring activities to determine if children referred by a Part C Service Provider Agency have an IEP in place at the age of three. A review of student records is to identify noncompliance issues with respect to 34 CFR 300.111 Child Find or 34 CFR 300.124 Transition of children from the Part C program to preschool programs.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0227 Richey Elem

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0227 Richey Elem

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

INDICATOR #3 - Statewide Assessments

Participation and performance of children with disabilities on statewide assessments:

3A. Has District met the state's AYP objectives for progress for disability subgroup?

3B. Participation rate for children with IEPs in statewide assessments.

3C. Proficiency rate for children with IEPs against grade-level standards and alternate achievement standards.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 3A	Assessment -- Meeting AYP Objectives	*	*	*	*	*	*	*
Indicator 3B	Assessment -- Participation Rates	*	*	*	*	*	*	*
Indicator 3C	Assessment -- Proficiency Rates	*	*	*	*	*	*	*

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

Percent of children with IEPs, aged 6-21,

5A. Removed from the regular class less than 21% of the school day.

5B. Removed from regular class greater than 60% of the day; or

5C. Served in public or private separate schools, residential placements, or homebound or hospital placements.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 5A	Education Environment Rate -- Reg Class > 80% of day	*	*	*	*	*	*	*
Indicator 5B	Education Environment Rate -- Reg Class < 40% of day	*	*	*	*	*	*	*
Indicator 5C	Education Environment Rate -- Sep Schls	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0227 Richey Elem

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0227 Richey Elem

INDICATOR #12 - Children Referred By Part C

Percent of children referred by Part C, prior to age 3, who are found eligible for Part B, and who have an IEP developed and implemented by their third birthday.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 12	Children referred by Part C	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI Compliance Monitoring

Indicator Data Note:

NA = Data not available as district was not monitored in the year in which data is being reported.

District performance for this indicator is only for districts monitored in the year in which data is being reported. The OPI reviews a sample of student records as part of its compliance monitoring activities to determine if children referred by a Part C Service Provider Agency have an IEP in place at the age of three. A review of student records is to identify noncompliance issues with respect to 34 CFR 300.111 Child Find or 34 CFR 300.124 Transition of children from the Part C program to preschool programs.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0228 Richey H S

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

0228 Richey H S

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0228 Richey H S

INDICATOR #3 - Statewide Assessments

Participation and performance of children with disabilities on statewide assessments:

3A. Has District met the state's AYP objectives for progress for disability subgroup?

3B. Participation rate for children with IEPs in statewide assessments.

3C. Proficiency rate for children with IEPs against grade-level standards and alternate achievement standards.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 3A	Assessment -- Meeting AYP Objectives	NA	NA	NA	NA	NA	NA	NA
Indicator 3B	Assessment -- Participation Rates	NA	NA	NA	NA	NA	NA	NA
Indicator 3C	Assessment -- Proficiency Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

0228 Richey H S

INDICATOR #4 - Suspension and Expulsion Rates

Districts who have been identified as having a significant discrepancy in long-term suspension and expulsion rates.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 4A	Suspension and Expulsion Rates	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

OPI School Discipline Data Collection reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The assessment of a school district's performance based on long-term suspension and expulsion rates is done by comparing the suspension and expulsion rates for students with disabilities to the long-term suspension and expulsion rates for nondisabled students. Long-term suspension or expulsion is defined as a suspension or expulsion that results in removal of a student, out-of-school, for greater than 10 school days or a student with multiple short-term (10 school days or less) out-of-school suspensions or expulsions that sum to greater than 10 school days during the school year.

For each racial/ethnic group, a statistical test of the difference between proportions is conducted to determine if the size of difference between the school district's special education long-term suspension and expulsion rates and the long-term suspension and expulsion rates for regular education students in the school district is statistically significant. In our comparison of long-term suspension and expulsion rates, we have set a .05 level of significance. This means, we are 95 percent confident that the differences between the rates are real (significant) and not due to random factors. However, the precision and reliability of this method is dependent upon having a large enough sample size to be representative of the school district's population and so, we also employ a minimum sample size (minimum N) of 10.

If the difference between the long-term suspension and expulsion rates for students with disabilities and the rates for nondisabled students by race/ethnicity group is statistically significant for a specific school district, the school district is flagged for additional investigation to determine if a significant discrepancy is occurring in the rates of long-term suspensions and expulsions of students with disabilities in a school year. This includes validation of the school district's long-term suspension and expulsion data and a systematic review of complaints/mediation/due process information, compliance monitoring and program data.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0228 Richey H S

INDICATOR #5 - Education Environment Rates

Percent of children with IEPs, aged 6-21,

5A. Removed from the regular class less than 21% of the school day.

5B. Removed from regular class greater than 60% of the day; or

5C. Served in public or private separate schools, residential placements, or homebound or hospital placements.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 5A	Education Environment Rate -- Reg Class > 80% of day	*	*	*	*	*	*	*
Indicator 5B	Education Environment Rate -- Reg Class < 40% of day	*	*	*	*	*	*	*
Indicator 5C	Education Environment Rate -- Sep Schls	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

0228 Richey H S

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

Indicator Data Source:

OPI Compliance Monitoring

Indicator Data Note:

NA = Data not available as district was not monitored in the year in which data is being reported.

District performance for this indicator is only for districts monitored in the year in which data is being reported. The OPI reviews a sample of student records as part of its compliance monitoring activities to determine if children referred by a Part C Service Provider Agency have an IEP in place at the age of three. A review of student records is to identify noncompliance issues with respect to 34 CFR 300.111 Child Find or 34 CFR 300.124 Transition of children from the Part C program to preschool programs.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

0069 Roberts K-12 Schools

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0069 Roberts K-12 Schools

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0069 Roberts K-12 Schools

INDICATOR #3 - Statewide Assessments

Participation and performance of children with disabilities on statewide assessments:

3A. Has District met the state's AYP objectives for progress for disability subgroup?

3B. Participation rate for children with IEPs in statewide assessments.

3C. Proficiency rate for children with IEPs against grade-level standards and alternate achievement standards.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 3A	Assessment -- Meeting AYP Objectives	*	*	*	*	*	*	*
Indicator 3B	Assessment -- Participation Rates	*	*	*	*	*	*	*
Indicator 3C	Assessment -- Proficiency Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0069 Roberts K-12 Schools

INDICATOR #4 - Suspension and Expulsion Rates

Districts who have been identified as having a significant discrepancy in long-term suspension and expulsion rates.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 4A	Suspension and Expulsion Rates	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

OPI School Discipline Data Collection reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The assessment of a school district's performance based on long-term suspension and expulsion rates is done by comparing the suspension and expulsion rates for students with disabilities to the long-term suspension and expulsion rates for nondisabled students. Long-term suspension or expulsion is defined as a suspension or expulsion that results in removal of a student, out-of-school, for greater than 10 school days or a student with multiple short-term (10 school days or less) out-of-school suspensions or expulsions that sum to greater than 10 school days during the school year.

For each racial/ethnic group, a statistical test of the difference between proportions is conducted to determine if the size of difference between the school district's special education long-term suspension and expulsion rates and the long-term suspension and expulsion rates for regular education students in the school district is statistically significant. In our comparison of long-term suspension and expulsion rates, we have set a .05 level of significance. This means, we are 95 percent confident that the differences between the rates are real (significant) and not due to random factors. However, the precision and reliability of this method is dependent upon having a large enough sample size to be representative of the school district's population and so, we also employ a minimum sample size (minimum N) of 10.

If the difference between the long-term suspension and expulsion rates for students with disabilities and the rates for nondisabled students by race/ethnicity group is statistically significant for a specific school district, the school district is flagged for additional investigation to determine if a significant discrepancy is occurring in the rates of long-term suspensions and expulsions of students with disabilities in a school year. This includes validation of the school district's long-term suspension and expulsion data and a systematic review of complaints/mediation/due process information, compliance monitoring and program data.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0069 Roberts K-12 Schools

INDICATOR #5 - Education Environment Rates

Percent of children with IEPs, aged 6-21,

5A. Removed from the regular class less than 21% of the school day.

5B. Removed from regular class greater than 60% of the day; or

5C. Served in public or private separate schools, residential placements, or homebound or hospital placements.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 5A	Education Environment Rate -- Reg Class > 80% of day	12	7	0.58 (58%)	0.25884	0.84878	0.5 (50%)	Met
Indicator 5B	Education Environment Rate -- Reg Class < 40% of day	12	1	0.08 (8%)	0.00165	0.82617	0.12 (12%)	Met
Indicator 5C	Education Environment Rate -- Sep Schls	12	2	0.17 (17%)	0.01245	0.75923	0.018 (1.8%)	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0069 Roberts K-12 Schools

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0069 Roberts K-12 Schools

INDICATOR #12 - Children Referred By Part C

Percent of children referred by Part C, prior to age 3, who are found eligible for Part B, and who have an IEP developed and implemented by their third birthday.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 12	Children referred by Part C	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI Compliance Monitoring

Indicator Data Note:

NA = Data not available as district was not monitored in the year in which data is being reported.

District performance for this indicator is only for districts monitored in the year in which data is being reported. The OPI reviews a sample of student records as part of its compliance monitoring activities to determine if children referred by a Part C Service Provider Agency have an IEP in place at the age of three. A review of student records is to identify noncompliance issues with respect to 34 CFR 300.111 Child Find or 34 CFR 300.124 Transition of children from the Part C program to preschool programs.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 1207 Rocky Boy Elem

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 1207 Rocky Boy Elem

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 1207 Rocky Boy Elem

INDICATOR #3 - Statewide Assessments

Participation and performance of children with disabilities on statewide assessments:

3A. Has District met the state's AYP objectives for progress for disability subgroup?

3B. Participation rate for children with IEPs in statewide assessments.

3C. Proficiency rate for children with IEPs against grade-level standards and alternate achievement standards.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 3A	Assessment -- Meeting AYP Objectives			(%)			NA	Not Met
Indicator 3B	Assessment -- Participation Rates	88	88	1 (100%)	0.95818	1	0.98 (98%)	Met
Indicator 3C	Assessment -- Proficiency Rates	*	*	*	*	*	*	*

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

District Name 1207 Rocky Boy Elem

INDICATOR #4 - Suspension and Expulsion Rates

Districts who have been identified as having a significant discrepancy in long-term suspension and expulsion rates.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 4A	Suspension and Expulsion Rates	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

OPI School Discipline Data Collection reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The assessment of a school district's performance based on long-term suspension and expulsion rates is done by comparing the suspension and expulsion rates for students with disabilities to the long-term suspension and expulsion rates for nondisabled students. Long-term suspension or expulsion is defined as a suspension or expulsion that results in removal of a student, out-of-school, for greater than 10 school days or a student with multiple short-term (10 school days or less) out-of-school suspensions or expulsions that sum to greater than 10 school days during the school year.

For each racial/ethnic group, a statistical test of the difference between proportions is conducted to determine if the size of difference between the school district's special education long-term suspension and expulsion rates and the long-term suspension and expulsion rates for regular education students in the school district is statistically significant. In our comparison of long-term suspension and expulsion rates, we have set a .05 level of significance. This means, we are 95 percent confident that the differences between the rates are real (significant) and not due to random factors. However, the precision and reliability of this method is dependent upon having a large enough sample size to be representative of the school district's population and so, we also employ a minimum sample size (minimum N) of 10.

If the difference between the long-term suspension and expulsion rates for students with disabilities and the rates for nondisabled students by race/ethnicity group is statistically significant for a specific school district, the school district is flagged for additional investigation to determine if a significant discrepancy is occurring in the rates of long-term suspensions and expulsions of students with disabilities in a school year. This includes validation of the school district's long-term suspension and expulsion data and a systematic review of complaints/mediation/due process information, compliance monitoring and program data.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

1207 Rocky Boy Elem

INDICATOR #5 - Education Environment Rates

Percent of children with IEPs, aged 6-21,

5A. Removed from the regular class less than 21% of the school day.

5B. Removed from regular class greater than 60% of the day; or

5C. Served in public or private separate schools, residential placements, or homebound or hospital placements.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 5A	Education Environment Rate -- Reg Class > 80% of day	50	36	0.72 (72%)	0.55776	0.83982	0.5 (50%)	Met
Indicator 5B	Education Environment Rate -- Reg Class < 40% of day	50	0	0 (0%)	0	0	0.12 (12%)	Met
Indicator 5C	Education Environment Rate -- Sep Schls	50	1	0.02 (2%)	0.00001	0.80163	0.018 (1.8%)	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 1207 Rocky Boy Elem

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 1207 Rocky Boy Elem

INDICATOR #12 - Children Referred By Part C

Percent of children referred by Part C, prior to age 3, who are found eligible for Part B, and who have an IEP developed and implemented by their third birthday.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 12	Children referred by Part C	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI Compliance Monitoring

Indicator Data Note:

NA = Data not available as district was not monitored in the year in which data is being reported.

District performance for this indicator is only for districts monitored in the year in which data is being reported. The OPI reviews a sample of student records as part of its compliance monitoring activities to determine if children referred by a Part C Service Provider Agency have an IEP in place at the age of three. A review of student records is to identify noncompliance issues with respect to 34 CFR 300.111 Child Find or 34 CFR 300.124 Transition of children from the Part C program to preschool programs.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 1229 Rocky Boy H S

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

1229 Rocky Boy H S

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	19	2	0.11 (11%)	0.00516	0.72446	0.058 (5.8%)	Met

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 1229 Rocky Boy H S

INDICATOR #3 - Statewide Assessments

Participation and performance of children with disabilities on statewide assessments:

3A. Has District met the state's AYP objectives for progress for disability subgroup?

3B. Participation rate for children with IEPs in statewide assessments.

3C. Proficiency rate for children with IEPs against grade-level standards and alternate achievement standards.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 3A	Assessment -- Meeting AYP Objectives	*	*	*	*	*	*	*
Indicator 3B	Assessment -- Participation Rates	*	*	*	*	*	*	*
Indicator 3C	Assessment -- Proficiency Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 1229 Rocky Boy H S

INDICATOR #4 - Suspension and Expulsion Rates

Districts who have been identified as having a significant discrepancy in long-term suspension and expulsion rates.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 4A	Suspension and Expulsion Rates	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

OPI School Discipline Data Collection reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The assessment of a school district's performance based on long-term suspension and expulsion rates is done by comparing the suspension and expulsion rates for students with disabilities to the long-term suspension and expulsion rates for nondisabled students. Long-term suspension or expulsion is defined as a suspension or expulsion that results in removal of a student, out-of-school, for greater than 10 school days or a student with multiple short-term (10 school days or less) out-of-school suspensions or expulsions that sum to greater than 10 school days during the school year.

For each racial/ethnic group, a statistical test of the difference between proportions is conducted to determine if the size of difference between the school district's special education long-term suspension and expulsion rates and the long-term suspension and expulsion rates for regular education students in the school district is statistically significant. In our comparison of long-term suspension and expulsion rates, we have set a .05 level of significance. This means, we are 95 percent confident that the differences between the rates are real (significant) and not due to random factors. However, the precision and reliability of this method is dependent upon having a large enough sample size to be representative of the school district's population and so, we also employ a minimum sample size (minimum N) of 10.

If the difference between the long-term suspension and expulsion rates for students with disabilities and the rates for nondisabled students by race/ethnicity group is statistically significant for a specific school district, the school district is flagged for additional investigation to determine if a significant discrepancy is occurring in the rates of long-term suspensions and expulsions of students with disabilities in a school year. This includes validation of the school district's long-term suspension and expulsion data and a systematic review of complaints/mediation/due process information, compliance monitoring and program data.

INDICATOR #5 - Education Environment Rates

Percent of children with IEPs, aged 6-21,

5A. Removed from the regular class less than 21% of the school day.

5B. Removed from regular class greater than 60% of the day; or

5C. Served in public or private separate schools, residential placements, or homebound or hospital placements.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 5A	Education Environment Rate -- Reg Class > 80% of day	19	10	0.53 (53%)	0.25585	0.78217	0.5 (50%)	Met
Indicator 5B	Education Environment Rate -- Reg Class < 40% of day	19	0	0 (0%)	0	0	0.12 (12%)	Met
Indicator 5C	Education Environment Rate -- Sep Schls	19	0	0 (0%)	0	0	0.018 (1.8%)	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 1229 Rocky Boy H S

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 1229 Rocky Boy H S

INDICATOR #12 - Children Referred By Part C

Percent of children referred by Part C, prior to age 3, who are found eligible for Part B, and who have an IEP developed and implemented by their third birthday.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 12	Children referred by Part C	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI Compliance Monitoring

Indicator Data Note:

NA = Data not available as district was not monitored in the year in which data is being reported.

District performance for this indicator is only for districts monitored in the year in which data is being reported. The OPI reviews a sample of student records as part of its compliance monitoring activities to determine if children referred by a Part C Service Provider Agency have an IEP in place at the age of three. A review of student records is to identify noncompliance issues with respect to 34 CFR 300.111 Child Find or 34 CFR 300.124 Transition of children from the Part C program to preschool programs.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 1199 Ronan Elem

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 1199 Ronan Elem

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 1199 Ronan Elem

INDICATOR #3 - Statewide Assessments

Participation and performance of children with disabilities on statewide assessments:

3A. Has District met the state's AYP objectives for progress for disability subgroup?

3B. Participation rate for children with IEPs in statewide assessments.

3C. Proficiency rate for children with IEPs against grade-level standards and alternate achievement standards.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 3A	Assessment -- Meeting AYP Objectives	NA	NA	NA	NA	NA	NA	Met
Indicator 3B	Assessment -- Participation Rates	142	142	1 (100%)	0.97367	1	0.98 (98%)	Met
Indicator 3C	Assessment -- Proficiency Rates	142	42	0.3 (30%)	0.17966	0.44611	0.295 (29.5%)	Met

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 1199 Ronan Elem

INDICATOR #4 - Suspension and Expulsion Rates

Districts who have been identified as having a significant discrepancy in long-term suspension and expulsion rates.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 4A	Suspension and Expulsion Rates	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

OPI School Discipline Data Collection reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The assessment of a school district's performance based on long-term suspension and expulsion rates is done by comparing the suspension and expulsion rates for students with disabilities to the long-term suspension and expulsion rates for nondisabled students. Long-term suspension or expulsion is defined as a suspension or expulsion that results in removal of a student, out-of-school, for greater than 10 school days or a student with multiple short-term (10 school days or less) out-of-school suspensions or expulsions that sum to greater than 10 school days during the school year.

For each racial/ethnic group, a statistical test of the difference between proportions is conducted to determine if the size of difference between the school district's special education long-term suspension and expulsion rates and the long-term suspension and expulsion rates for regular education students in the school district is statistically significant. In our comparison of long-term suspension and expulsion rates, we have set a .05 level of significance. This means, we are 95 percent confident that the differences between the rates are real (significant) and not due to random factors. However, the precision and reliability of this method is dependent upon having a large enough sample size to be representative of the school district's population and so, we also employ a minimum sample size (minimum N) of 10.

If the difference between the long-term suspension and expulsion rates for students with disabilities and the rates for nondisabled students by race/ethnicity group is statistically significant for a specific school district, the school district is flagged for additional investigation to determine if a significant discrepancy is occurring in the rates of long-term suspensions and expulsions of students with disabilities in a school year. This includes validation of the school district's long-term suspension and expulsion data and a systematic review of complaints/mediation/due process information, compliance monitoring and program data.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 1199 Ronan Elem

INDICATOR #5 - Education Environment Rates

Percent of children with IEPs, aged 6-21,

5A. Removed from the regular class less than 21% of the school day.

5B. Removed from regular class greater than 60% of the day; or

5C. Served in public or private separate schools, residential placements, or homebound or hospital placements.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 5A	Education Environment Rate -- Reg Class > 80% of day	100	61	0.61 (61%)	0.48458	0.72238	0.5 (50%)	Met
Indicator 5B	Education Environment Rate -- Reg Class < 40% of day	100	4	0.04 (4%)	0.00148	0.52912	0.12 (12%)	Met
Indicator 5C	Education Environment Rate -- Sep Schls	100	0	0 (0%)	0	0	0.018 (1.8%)	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 1199 Ronan Elem

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	26	16	0.62 (62%)	0.37781	0.80829	0.548 (54.8%)	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 1199 Ronan Elem

INDICATOR #12 - Children Referred By Part C

Percent of children referred by Part C, prior to age 3, who are found eligible for Part B, and who have an IEP developed and implemented by their third birthday.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 12	Children referred by Part C	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI Compliance Monitoring

Indicator Data Note:

NA = Data not available as district was not monitored in the year in which data is being reported.

District performance for this indicator is only for districts monitored in the year in which data is being reported. The OPI reviews a sample of student records as part of its compliance monitoring activities to determine if children referred by a Part C Service Provider Agency have an IEP in place at the age of three. A review of student records is to identify noncompliance issues with respect to 34 CFR 300.111 Child Find or 34 CFR 300.124 Transition of children from the Part C program to preschool programs.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 1200 Ronan H S

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

District Name

1200 Ronan H S

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	32	2	0.06 (6%)	0.00184	0.69849	0.058 (5.8%)	Met

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 1200 Ronan H S

INDICATOR #4 - Suspension and Expulsion Rates

Districts who have been identified as having a significant discrepancy in long-term suspension and expulsion rates.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 4A	Suspension and Expulsion Rates	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

OPI School Discipline Data Collection reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The assessment of a school district's performance based on long-term suspension and expulsion rates is done by comparing the suspension and expulsion rates for students with disabilities to the long-term suspension and expulsion rates for nondisabled students. Long-term suspension or expulsion is defined as a suspension or expulsion that results in removal of a student, out-of-school, for greater than 10 school days or a student with multiple short-term (10 school days or less) out-of-school suspensions or expulsions that sum to greater than 10 school days during the school year.

For each racial/ethnic group, a statistical test of the difference between proportions is conducted to determine if the size of difference between the school district's special education long-term suspension and expulsion rates and the long-term suspension and expulsion rates for regular education students in the school district is statistically significant. In our comparison of long-term suspension and expulsion rates, we have set a .05 level of significance. This means, we are 95 percent confident that the differences between the rates are real (significant) and not due to random factors. However, the precision and reliability of this method is dependent upon having a large enough sample size to be representative of the school district's population and so, we also employ a minimum sample size (minimum N) of 10.

If the difference between the long-term suspension and expulsion rates for students with disabilities and the rates for nondisabled students by race/ethnicity group is statistically significant for a specific school district, the school district is flagged for additional investigation to determine if a significant discrepancy is occurring in the rates of long-term suspensions and expulsions of students with disabilities in a school year. This includes validation of the school district's long-term suspension and expulsion data and a systematic review of complaints/mediation/due process information, compliance monitoring and program data.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 1200 Ronan H S

INDICATOR #5 - Education Environment Rates

Percent of children with IEPs, aged 6-21,

5A. Removed from the regular class less than 21% of the school day.

5B. Removed from regular class greater than 60% of the day; or

5C. Served in public or private separate schools, residential placements, or homebound or hospital placements.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 5A	Education Environment Rate -- Reg Class > 80% of day	32	9	0.28 (28%)	0.09218	0.60115	0.5 (50%)	Met
Indicator 5B	Education Environment Rate -- Reg Class < 40% of day	32	0	0 (0%)	0	0	0.12 (12%)	Met
Indicator 5C	Education Environment Rate -- Sep Schls	32	0	0 (0%)	0	0	0.018 (1.8%)	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

1200 Ronan H S

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 1200 Ronan H S

INDICATOR #12 - Children Referred By Part C

Percent of children referred by Part C, prior to age 3, who are found eligible for Part B, and who have an IEP developed and implemented by their third birthday.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 12	Children referred by Part C	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI Compliance Monitoring

Indicator Data Note:

NA = Data not available as district was not monitored in the year in which data is being reported.

District performance for this indicator is only for districts monitored in the year in which data is being reported. The OPI reviews a sample of student records as part of its compliance monitoring activities to determine if children referred by a Part C Service Provider Agency have an IEP in place at the age of three. A review of student records is to identify noncompliance issues with respect to 34 CFR 300.111 Child Find or 34 CFR 300.124 Transition of children from the Part C program to preschool programs.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0794 Rosebud Elem

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0794 Rosebud Elem

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0794 Rosebud Elem

INDICATOR #3 - Statewide Assessments

Participation and performance of children with disabilities on statewide assessments:

3A. Has District met the state's AYP objectives for progress for disability subgroup?

3B. Participation rate for children with IEPs in statewide assessments.

3C. Proficiency rate for children with IEPs against grade-level standards and alternate achievement standards.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 3A	Assessment -- Meeting AYP Objectives	*	*	*	*	*	*	*
Indicator 3B	Assessment -- Participation Rates	12	12	1 (100%)	0.75755	1.00003	0.98 (98%)	Met
Indicator 3C	Assessment -- Proficiency Rates	*	*	*	*	*	*	*

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0794 Rosebud Elem

INDICATOR #4 - Suspension and Expulsion Rates

Districts who have been identified as having a significant discrepancy in long-term suspension and expulsion rates.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 4A	Suspension and Expulsion Rates	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

OPI School Discipline Data Collection reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The assessment of a school district's performance based on long-term suspension and expulsion rates is done by comparing the suspension and expulsion rates for students with disabilities to the long-term suspension and expulsion rates for nondisabled students. Long-term suspension or expulsion is defined as a suspension or expulsion that results in removal of a student, out-of-school, for greater than 10 school days or a student with multiple short-term (10 school days or less) out-of-school suspensions or expulsions that sum to greater than 10 school days during the school year.

For each racial/ethnic group, a statistical test of the difference between proportions is conducted to determine if the size of difference between the school district's special education long-term suspension and expulsion rates and the long-term suspension and expulsion rates for regular education students in the school district is statistically significant. In our comparison of long-term suspension and expulsion rates, we have set a .05 level of significance. This means, we are 95 percent confident that the differences between the rates are real (significant) and not due to random factors. However, the precision and reliability of this method is dependent upon having a large enough sample size to be representative of the school district's population and so, we also employ a minimum sample size (minimum N) of 10.

If the difference between the long-term suspension and expulsion rates for students with disabilities and the rates for nondisabled students by race/ethnicity group is statistically significant for a specific school district, the school district is flagged for additional investigation to determine if a significant discrepancy is occurring in the rates of long-term suspensions and expulsions of students with disabilities in a school year. This includes validation of the school district's long-term suspension and expulsion data and a systematic review of complaints/mediation/due process information, compliance monitoring and program data.

0794 Rosebud Elem

INDICATOR #5 - Education Environment Rates

Percent of children with IEPs, aged 6-21,

5A. Removed from the regular class less than 21% of the school day.

5B. Removed from regular class greater than 60% of the day; or

5C. Served in public or private separate schools, residential placements, or homebound or hospital placements.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 5A	Education Environment Rate -- Reg Class > 80% of day	*	*	*	*	*	*	*
Indicator 5B	Education Environment Rate -- Reg Class < 40% of day	*	*	*	*	*	*	*
Indicator 5C	Education Environment Rate -- Sep Schls	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

0794 Rosebud Elem

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0794 Rosebud Elem

INDICATOR #12 - Children Referred By Part C

Percent of children referred by Part C, prior to age 3, who are found eligible for Part B, and who have an IEP developed and implemented by their third birthday.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 12	Children referred by Part C	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI Compliance Monitoring

Indicator Data Note:

NA = Data not available as district was not monitored in the year in which data is being reported.

District performance for this indicator is only for districts monitored in the year in which data is being reported. The OPI reviews a sample of student records as part of its compliance monitoring activities to determine if children referred by a Part C Service Provider Agency have an IEP in place at the age of three. A review of student records is to identify noncompliance issues with respect to 34 CFR 300.111 Child Find or 34 CFR 300.124 Transition of children from the Part C program to preschool programs.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0795 Rosebud H S

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0795 Rosebud H S

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0795 Rosebud H S

INDICATOR #3 - Statewide Assessments

Participation and performance of children with disabilities on statewide assessments:

3A. Has District met the state's AYP objectives for progress for disability subgroup?

3B. Participation rate for children with IEPs in statewide assessments.

3C. Proficiency rate for children with IEPs against grade-level standards and alternate achievement standards.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 3A	Assessment -- Meeting AYP Objectives	NA	NA	NA	NA	NA	NA	NA
Indicator 3B	Assessment -- Participation Rates	NA	NA	NA	NA	NA	NA	NA
Indicator 3C	Assessment -- Proficiency Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

0795 Rosebud H S

INDICATOR #4 - Suspension and Expulsion Rates

Districts who have been identified as having a significant discrepancy in long-term suspension and expulsion rates.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 4A	Suspension and Expulsion Rates	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

OPI School Discipline Data Collection reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The assessment of a school district's performance based on long-term suspension and expulsion rates is done by comparing the suspension and expulsion rates for students with disabilities to the long-term suspension and expulsion rates for nondisabled students. Long-term suspension or expulsion is defined as a suspension or expulsion that results in removal of a student, out-of-school, for greater than 10 school days or a student with multiple short-term (10 school days or less) out-of-school suspensions or expulsions that sum to greater than 10 school days during the school year.

For each racial/ethnic group, a statistical test of the difference between proportions is conducted to determine if the size of difference between the school district's special education long-term suspension and expulsion rates and the long-term suspension and expulsion rates for regular education students in the school district is statistically significant. In our comparison of long-term suspension and expulsion rates, we have set a .05 level of significance. This means, we are 95 percent confident that the differences between the rates are real (significant) and not due to random factors. However, the precision and reliability of this method is dependent upon having a large enough sample size to be representative of the school district's population and so, we also employ a minimum sample size (minimum N) of 10.

If the difference between the long-term suspension and expulsion rates for students with disabilities and the rates for nondisabled students by race/ethnicity group is statistically significant for a specific school district, the school district is flagged for additional investigation to determine if a significant discrepancy is occurring in the rates of long-term suspensions and expulsions of students with disabilities in a school year. This includes validation of the school district's long-term suspension and expulsion data and a systematic review of complaints/mediation/due process information, compliance monitoring and program data.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

0795 Rosebud H S

INDICATOR #5 - Education Environment Rates

Percent of children with IEPs, aged 6-21,

5A. Removed from the regular class less than 21% of the school day.

5B. Removed from regular class greater than 60% of the day; or

5C. Served in public or private separate schools, residential placements, or homebound or hospital placements.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 5A	Education Environment Rate -- Reg Class > 80% of day	*	*	*	*	*	*	*
Indicator 5B	Education Environment Rate -- Reg Class < 40% of day	*	*	*	*	*	*	*
Indicator 5C	Education Environment Rate -- Sep Schls	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0795 Rosebud H S

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

OPI Compliance Monitoring

Indicator Data Note:

NA = Data not available as district was not monitored in the year in which data is being reported.

District performance for this indicator is only for districts monitored in the year in which data is being reported. The OPI reviews a sample of student records as part of its compliance monitoring activities to determine if children referred by a Part C Service Provider Agency have an IEP in place at the age of three. A review of student records is to identify noncompliance issues with respect to 34 CFR 300.111 Child Find or 34 CFR 300.124 Transition of children from the Part C program to preschool programs.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0394 Ross Elem

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

0394 Ross Elem

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

INDICATOR #3 - Statewide Assessments

Participation and performance of children with disabilities on statewide assessments:

3A. Has District met the state's AYP objectives for progress for disability subgroup?

3B. Participation rate for children with IEPs in statewide assessments.

3C. Proficiency rate for children with IEPs against grade-level standards and alternate achievement standards.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 3A	Assessment -- Meeting AYP Objectives	NA	NA	NA	NA	NA	NA	NA
Indicator 3B	Assessment -- Participation Rates	NA	NA	NA	NA	NA	NA	NA
Indicator 3C	Assessment -- Proficiency Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

0394 Ross Elem

INDICATOR #4 - Suspension and Expulsion Rates

Districts who have been identified as having a significant discrepancy in long-term suspension and expulsion rates.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 4A	Suspension and Expulsion Rates	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

OPI School Discipline Data Collection reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The assessment of a school district's performance based on long-term suspension and expulsion rates is done by comparing the suspension and expulsion rates for students with disabilities to the long-term suspension and expulsion rates for nondisabled students. Long-term suspension or expulsion is defined as a suspension or expulsion that results in removal of a student, out-of-school, for greater than 10 school days or a student with multiple short-term (10 school days or less) out-of-school suspensions or expulsions that sum to greater than 10 school days during the school year.

For each racial/ethnic group, a statistical test of the difference between proportions is conducted to determine if the size of difference between the school district's special education long-term suspension and expulsion rates and the long-term suspension and expulsion rates for regular education students in the school district is statistically significant. In our comparison of long-term suspension and expulsion rates, we have set a .05 level of significance. This means, we are 95 percent confident that the differences between the rates are real (significant) and not due to random factors. However, the precision and reliability of this method is dependent upon having a large enough sample size to be representative of the school district's population and so, we also employ a minimum sample size (minimum N) of 10.

If the difference between the long-term suspension and expulsion rates for students with disabilities and the rates for nondisabled students by race/ethnicity group is statistically significant for a specific school district, the school district is flagged for additional investigation to determine if a significant discrepancy is occurring in the rates of long-term suspensions and expulsions of students with disabilities in a school year. This includes validation of the school district's long-term suspension and expulsion data and a systematic review of complaints/mediation/due process information, compliance monitoring and program data.

INDICATOR #5 - Education Environment Rates

Percent of children with IEPs, aged 6-21,

5A. Removed from the regular class less than 21% of the school day.

5B. Removed from regular class greater than 60% of the day; or

5C. Served in public or private separate schools, residential placements, or homebound or hospital placements.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 5A	Education Environment Rate -- Reg Class > 80% of day	*	*	*	*	*	*	*
Indicator 5B	Education Environment Rate -- Reg Class < 40% of day	*	*	*	*	*	*	*
Indicator 5C	Education Environment Rate -- Sep Schls	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

0394 Ross Elem

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

0394 Ross Elem

INDICATOR #12 - Children Referred By Part C

Percent of children referred by Part C, prior to age 3, who are found eligible for Part B, and who have an IEP developed and implemented by their third birthday.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 12	Children referred by Part C	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI Compliance Monitoring

Indicator Data Note:

NA = Data not available as district was not monitored in the year in which data is being reported.

District performance for this indicator is only for districts monitored in the year in which data is being reported. The OPI reviews a sample of student records as part of its compliance monitoring activities to determine if children referred by a Part C Service Provider Agency have an IEP in place at the age of three. A review of student records is to identify noncompliance issues with respect to 34 CFR 300.111 Child Find or 34 CFR 300.124 Transition of children from the Part C program to preschool programs.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0605 Roundup Elem

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0605 Roundup Elem

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0605 Roundup Elem

INDICATOR #3 - Statewide Assessments

Participation and performance of children with disabilities on statewide assessments:

3A. Has District met the state's AYP objectives for progress for disability subgroup?

3B. Participation rate for children with IEPs in statewide assessments.

3C. Proficiency rate for children with IEPs against grade-level standards and alternate achievement standards.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 3A	Assessment -- Meeting AYP Objectives			(%)			NA	Not Met
Indicator 3B	Assessment -- Participation Rates	116	116	1 (100%)	0.96795	1	0.98 (98%)	Met
Indicator 3C	Assessment -- Proficiency Rates	116	29	0.25 (25%)	0.12827	0.43019	0.295 (29.5%)	Met

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0605 Roundup Elem

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	18	18	1 (100%)	0.82415	1.00001	0.548 (54.8%)	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0605 Roundup Elem

INDICATOR #12 - Children Referred By Part C

Percent of children referred by Part C, prior to age 3, who are found eligible for Part B, and who have an IEP developed and implemented by their third birthday.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 12	Children referred by Part C	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI Compliance Monitoring

Indicator Data Note:

NA = Data not available as district was not monitored in the year in which data is being reported.

District performance for this indicator is only for districts monitored in the year in which data is being reported. The OPI reviews a sample of student records as part of its compliance monitoring activities to determine if children referred by a Part C Service Provider Agency have an IEP in place at the age of three. A review of student records is to identify noncompliance issues with respect to 34 CFR 300.111 Child Find or 34 CFR 300.124 Transition of children from the Part C program to preschool programs.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0606 Roundup H S

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0606 Roundup H S

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	18	2	0.11 (11%)	0.00573	0.7279	0.058 (5.8%)	Met

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0606 Roundup H S

INDICATOR #3 - Statewide Assessments

Participation and performance of children with disabilities on statewide assessments:

3A. Has District met the state's AYP objectives for progress for disability subgroup?

3B. Participation rate for children with IEPs in statewide assessments.

3C. Proficiency rate for children with IEPs against grade-level standards and alternate achievement standards.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 3A	Assessment -- Meeting AYP Objectives	*	*	*	*	*	*	*
Indicator 3B	Assessment -- Participation Rates	10	10	1 (100%)	0.72251	1.00003	0.98 (98%)	Met
Indicator 3C	Assessment -- Proficiency Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0606 Roundup H S

INDICATOR #4 - Suspension and Expulsion Rates

Districts who have been identified as having a significant discrepancy in long-term suspension and expulsion rates.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 4A	Suspension and Expulsion Rates	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

OPI School Discipline Data Collection reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The assessment of a school district's performance based on long-term suspension and expulsion rates is done by comparing the suspension and expulsion rates for students with disabilities to the long-term suspension and expulsion rates for nondisabled students. Long-term suspension or expulsion is defined as a suspension or expulsion that results in removal of a student, out-of-school, for greater than 10 school days or a student with multiple short-term (10 school days or less) out-of-school suspensions or expulsions that sum to greater than 10 school days during the school year.

For each racial/ethnic group, a statistical test of the difference between proportions is conducted to determine if the size of difference between the school district's special education long-term suspension and expulsion rates and the long-term suspension and expulsion rates for regular education students in the school district is statistically significant. In our comparison of long-term suspension and expulsion rates, we have set a .05 level of significance. This means, we are 95 percent confident that the differences between the rates are real (significant) and not due to random factors. However, the precision and reliability of this method is dependent upon having a large enough sample size to be representative of the school district's population and so, we also employ a minimum sample size (minimum N) of 10.

If the difference between the long-term suspension and expulsion rates for students with disabilities and the rates for nondisabled students by race/ethnicity group is statistically significant for a specific school district, the school district is flagged for additional investigation to determine if a significant discrepancy is occurring in the rates of long-term suspensions and expulsions of students with disabilities in a school year. This includes validation of the school district's long-term suspension and expulsion data and a systematic review of complaints/mediation/due process information, compliance monitoring and program data.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0606 Roundup H S

INDICATOR #5 - Education Environment Rates

Percent of children with IEPs, aged 6-21,

5A. Removed from the regular class less than 21% of the school day.

5B. Removed from regular class greater than 60% of the day; or

5C. Served in public or private separate schools, residential placements, or homebound or hospital placements.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 5A	Education Environment Rate -- Reg Class > 80% of day	18	9	0.5 (50%)	0.2265	0.77349	0.5 (50%)	Met
Indicator 5B	Education Environment Rate -- Reg Class < 40% of day	18	3	0.17 (17%)	0.01758	0.69001	0.12 (12%)	Met
Indicator 5C	Education Environment Rate -- Sep Schls	18	0	0 (0%)	0	0	0.018 (1.8%)	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0606 Roundup H S

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

Indicator Data Source:

OPI Compliance Monitoring

Indicator Data Note:

NA = Data not available as district was not monitored in the year in which data is being reported.

District performance for this indicator is only for districts monitored in the year in which data is being reported. The OPI reviews a sample of student records as part of its compliance monitoring activities to determine if children referred by a Part C Service Provider Agency have an IEP in place at the age of three. A review of student records is to identify noncompliance issues with respect to 34 CFR 300.111 Child Find or 34 CFR 300.124 Transition of children from the Part C program to preschool programs.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0280 Roy K-12 Schools

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0280 Roy K-12 Schools

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0280 Roy K-12 Schools

INDICATOR #3 - Statewide Assessments

Participation and performance of children with disabilities on statewide assessments:

3A. Has District met the state's AYP objectives for progress for disability subgroup?

3B. Participation rate for children with IEPs in statewide assessments.

3C. Proficiency rate for children with IEPs against grade-level standards and alternate achievement standards.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 3A	Assessment -- Meeting AYP Objectives	*	*	*	*	*	*	*
Indicator 3B	Assessment -- Participation Rates	*	*	*	*	*	*	*
Indicator 3C	Assessment -- Proficiency Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0280 Roy K-12 Schools

INDICATOR #4 - Suspension and Expulsion Rates

Districts who have been identified as having a significant discrepancy in long-term suspension and expulsion rates.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 4A	Suspension and Expulsion Rates	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

OPI School Discipline Data Collection reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The assessment of a school district's performance based on long-term suspension and expulsion rates is done by comparing the suspension and expulsion rates for students with disabilities to the long-term suspension and expulsion rates for nondisabled students. Long-term suspension or expulsion is defined as a suspension or expulsion that results in removal of a student, out-of-school, for greater than 10 school days or a student with multiple short-term (10 school days or less) out-of-school suspensions or expulsions that sum to greater than 10 school days during the school year.

For each racial/ethnic group, a statistical test of the difference between proportions is conducted to determine if the size of difference between the school district's special education long-term suspension and expulsion rates and the long-term suspension and expulsion rates for regular education students in the school district is statistically significant. In our comparison of long-term suspension and expulsion rates, we have set a .05 level of significance. This means, we are 95 percent confident that the differences between the rates are real (significant) and not due to random factors. However, the precision and reliability of this method is dependent upon having a large enough sample size to be representative of the school district's population and so, we also employ a minimum sample size (minimum N) of 10.

If the difference between the long-term suspension and expulsion rates for students with disabilities and the rates for nondisabled students by race/ethnicity group is statistically significant for a specific school district, the school district is flagged for additional investigation to determine if a significant discrepancy is occurring in the rates of long-term suspensions and expulsions of students with disabilities in a school year. This includes validation of the school district's long-term suspension and expulsion data and a systematic review of complaints/mediation/due process information, compliance monitoring and program data.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0280 Roy K-12 Schools

INDICATOR #5 - Education Environment Rates

Percent of children with IEPs, aged 6-21,

5A. Removed from the regular class less than 21% of the school day.

5B. Removed from regular class greater than 60% of the day; or

5C. Served in public or private separate schools, residential placements, or homebound or hospital placements.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 5A	Education Environment Rate -- Reg Class > 80% of day	12	6	0.5 (50%)	0.18758	0.81241	0.5 (50%)	Met
Indicator 5B	Education Environment Rate -- Reg Class < 40% of day	12	0	0 (0%)	0	0	0.12 (12%)	Met
Indicator 5C	Education Environment Rate -- Sep Schls	12	0	0 (0%)	0	0	0.018 (1.8%)	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0280 Roy K-12 Schools

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0280 Roy K-12 Schools

INDICATOR #12 - Children Referred By Part C

Percent of children referred by Part C, prior to age 3, who are found eligible for Part B, and who have an IEP developed and implemented by their third birthday.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 12	Children referred by Part C	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI Compliance Monitoring

Indicator Data Note:

NA = Data not available as district was not monitored in the year in which data is being reported.

District performance for this indicator is only for districts monitored in the year in which data is being reported. The OPI reviews a sample of student records as part of its compliance monitoring activities to determine if children referred by a Part C Service Provider Agency have an IEP in place at the age of three. A review of student records is to identify noncompliance issues with respect to 34 CFR 300.111 Child Find or 34 CFR 300.124 Transition of children from the Part C program to preschool programs.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0407 Ryegate K-12 Schools

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0407 Ryegate K-12 Schools

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	13	1	0.08 (8%)	0.00139	0.82377	0.058 (5.8%)	Met

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0407 Ryegate K-12 Schools

INDICATOR #3 - Statewide Assessments

Participation and performance of children with disabilities on statewide assessments:

3A. Has District met the state's AYP objectives for progress for disability subgroup?

3B. Participation rate for children with IEPs in statewide assessments.

3C. Proficiency rate for children with IEPs against grade-level standards and alternate achievement standards.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 3A	Assessment -- Meeting AYP Objectives	*	*	*	*	*	*	*
Indicator 3B	Assessment -- Participation Rates	16	20	1 (100%)	0.83891	1.00002	0.98 (98%)	Met
Indicator 3C	Assessment -- Proficiency Rates	*	*	*	*	*	*	*

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0407 Ryegate K-12 Schools

INDICATOR #4 - Suspension and Expulsion Rates

Districts who have been identified as having a significant discrepancy in long-term suspension and expulsion rates.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 4A	Suspension and Expulsion Rates	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

OPI School Discipline Data Collection reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The assessment of a school district's performance based on long-term suspension and expulsion rates is done by comparing the suspension and expulsion rates for students with disabilities to the long-term suspension and expulsion rates for nondisabled students. Long-term suspension or expulsion is defined as a suspension or expulsion that results in removal of a student, out-of-school, for greater than 10 school days or a student with multiple short-term (10 school days or less) out-of-school suspensions or expulsions that sum to greater than 10 school days during the school year.

For each racial/ethnic group, a statistical test of the difference between proportions is conducted to determine if the size of difference between the school district's special education long-term suspension and expulsion rates and the long-term suspension and expulsion rates for regular education students in the school district is statistically significant. In our comparison of long-term suspension and expulsion rates, we have set a .05 level of significance. This means, we are 95 percent confident that the differences between the rates are real (significant) and not due to random factors. However, the precision and reliability of this method is dependent upon having a large enough sample size to be representative of the school district's population and so, we also employ a minimum sample size (minimum N) of 10.

If the difference between the long-term suspension and expulsion rates for students with disabilities and the rates for nondisabled students by race/ethnicity group is statistically significant for a specific school district, the school district is flagged for additional investigation to determine if a significant discrepancy is occurring in the rates of long-term suspensions and expulsions of students with disabilities in a school year. This includes validation of the school district's long-term suspension and expulsion data and a systematic review of complaints/mediation/due process information, compliance monitoring and program data.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

0407 Ryegate K-12 Schools

INDICATOR #5 - Education Environment Rates

Percent of children with IEPs, aged 6-21,

5A. Removed from the regular class less than 21% of the school day.

5B. Removed from regular class greater than 60% of the day; or

5C. Served in public or private separate schools, residential placements, or homebound or hospital placements.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 5A	Education Environment Rate -- Reg Class > 80% of day	19	18	0.95 (95%)	0.74639	0.99102	0.5 (50%)	Met
Indicator 5B	Education Environment Rate -- Reg Class < 40% of day	19	0	0 (0%)	0	0	0.12 (12%)	Met
Indicator 5C	Education Environment Rate -- Sep Schls	19	0	0 (0%)	0	0	0.018 (1.8%)	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

0407 Ryegate K-12 Schools

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0407 Ryegate K-12 Schools

INDICATOR #12 - Children Referred By Part C

Percent of children referred by Part C, prior to age 3, who are found eligible for Part B, and who have an IEP developed and implemented by their third birthday.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 12	Children referred by Part C	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI Compliance Monitoring

Indicator Data Note:

NA = Data not available as district was not monitored in the year in which data is being reported.

District performance for this indicator is only for districts monitored in the year in which data is being reported. The OPI reviews a sample of student records as part of its compliance monitoring activities to determine if children referred by a Part C Service Provider Agency have an IEP in place at the age of three. A review of student records is to identify noncompliance issues with respect to 34 CFR 300.111 Child Find or 34 CFR 300.124 Transition of children from the Part C program to preschool programs.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

1238 S H Elem

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

1238 S H Elem

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

INDICATOR #3 - Statewide Assessments

Participation and performance of children with disabilities on statewide assessments:

3A. Has District met the state's AYP objectives for progress for disability subgroup?

3B. Participation rate for children with IEPs in statewide assessments.

3C. Proficiency rate for children with IEPs against grade-level standards and alternate achievement standards.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 3A	Assessment -- Meeting AYP Objectives	*	*	*	*	*	*	*
Indicator 3B	Assessment -- Participation Rates	NA	NA	NA	NA	NA	NA	NA
Indicator 3C	Assessment -- Proficiency Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

1238 S H Elem

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 1238 S H Elem

INDICATOR #12 - Children Referred By Part C

Percent of children referred by Part C, prior to age 3, who are found eligible for Part B, and who have an IEP developed and implemented by their third birthday.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 12	Children referred by Part C	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI Compliance Monitoring

Indicator Data Note:

NA = Data not available as district was not monitored in the year in which data is being reported.

District performance for this indicator is only for districts monitored in the year in which data is being reported. The OPI reviews a sample of student records as part of its compliance monitoring activities to determine if children referred by a Part C Service Provider Agency have an IEP in place at the age of three. A review of student records is to identify noncompliance issues with respect to 34 CFR 300.111 Child Find or 34 CFR 300.124 Transition of children from the Part C program to preschool programs.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 1203 Saco Elem

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 1203 Saco Elem

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 1203 Saco Elem

INDICATOR #3 - Statewide Assessments

Participation and performance of children with disabilities on statewide assessments:

3A. Has District met the state's AYP objectives for progress for disability subgroup?

3B. Participation rate for children with IEPs in statewide assessments.

3C. Proficiency rate for children with IEPs against grade-level standards and alternate achievement standards.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 3A	Assessment -- Meeting AYP Objectives	*	*	*	*	*	*	*
Indicator 3B	Assessment -- Participation Rates	12	12	1 (100%)	0.75755	1.00003	0.98 (98%)	Met
Indicator 3C	Assessment -- Proficiency Rates	*	*	*	*	*	*	*

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 1203 Saco Elem

INDICATOR #4 - Suspension and Expulsion Rates

Districts who have been identified as having a significant discrepancy in long-term suspension and expulsion rates.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 4A	Suspension and Expulsion Rates	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

OPI School Discipline Data Collection reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The assessment of a school district's performance based on long-term suspension and expulsion rates is done by comparing the suspension and expulsion rates for students with disabilities to the long-term suspension and expulsion rates for nondisabled students. Long-term suspension or expulsion is defined as a suspension or expulsion that results in removal of a student, out-of-school, for greater than 10 school days or a student with multiple short-term (10 school days or less) out-of-school suspensions or expulsions that sum to greater than 10 school days during the school year.

For each racial/ethnic group, a statistical test of the difference between proportions is conducted to determine if the size of difference between the school district's special education long-term suspension and expulsion rates and the long-term suspension and expulsion rates for regular education students in the school district is statistically significant. In our comparison of long-term suspension and expulsion rates, we have set a .05 level of significance. This means, we are 95 percent confident that the differences between the rates are real (significant) and not due to random factors. However, the precision and reliability of this method is dependent upon having a large enough sample size to be representative of the school district's population and so, we also employ a minimum sample size (minimum N) of 10.

If the difference between the long-term suspension and expulsion rates for students with disabilities and the rates for nondisabled students by race/ethnicity group is statistically significant for a specific school district, the school district is flagged for additional investigation to determine if a significant discrepancy is occurring in the rates of long-term suspensions and expulsions of students with disabilities in a school year. This includes validation of the school district's long-term suspension and expulsion data and a systematic review of complaints/mediation/due process information, compliance monitoring and program data.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 1203 Saco Elem

INDICATOR #5 - Education Environment Rates

Percent of children with IEPs, aged 6-21,

5A. Removed from the regular class less than 21% of the school day.

5B. Removed from regular class greater than 60% of the day; or

5C. Served in public or private separate schools, residential placements, or homebound or hospital placements.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 5A	Education Environment Rate -- Reg Class > 80% of day	*	*	*	*	*	*	*
Indicator 5B	Education Environment Rate -- Reg Class < 40% of day	*	*	*	*	*	*	*
Indicator 5C	Education Environment Rate -- Sep Schls	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 1203 Saco Elem

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

Indicator Data Source:

OPI Compliance Monitoring

Indicator Data Note:

NA = Data not available as district was not monitored in the year in which data is being reported.

District performance for this indicator is only for districts monitored in the year in which data is being reported. The OPI reviews a sample of student records as part of its compliance monitoring activities to determine if children referred by a Part C Service Provider Agency have an IEP in place at the age of three. A review of student records is to identify noncompliance issues with respect to 34 CFR 300.111 Child Find or 34 CFR 300.124 Transition of children from the Part C program to preschool programs.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0657 Saco H S

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

0657 Saco H S

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

District Name

0657 Saco H S

INDICATOR #3 - Statewide Assessments

Participation and performance of children with disabilities on statewide assessments:

3A. Has District met the state's AYP objectives for progress for disability subgroup?

3B. Participation rate for children with IEPs in statewide assessments.

3C. Proficiency rate for children with IEPs against grade-level standards and alternate achievement standards.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 3A	Assessment -- Meeting AYP Objectives	*	*	*	*	*	*	*
Indicator 3B	Assessment -- Participation Rates	*	*	*	*	*	*	*
Indicator 3C	Assessment -- Proficiency Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

0657 Saco H S

INDICATOR #4 - Suspension and Expulsion Rates

Districts who have been identified as having a significant discrepancy in long-term suspension and expulsion rates.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 4A	Suspension and Expulsion Rates	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

OPI School Discipline Data Collection reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The assessment of a school district's performance based on long-term suspension and expulsion rates is done by comparing the suspension and expulsion rates for students with disabilities to the long-term suspension and expulsion rates for nondisabled students. Long-term suspension or expulsion is defined as a suspension or expulsion that results in removal of a student, out-of-school, for greater than 10 school days or a student with multiple short-term (10 school days or less) out-of-school suspensions or expulsions that sum to greater than 10 school days during the school year.

For each racial/ethnic group, a statistical test of the difference between proportions is conducted to determine if the size of difference between the school district's special education long-term suspension and expulsion rates and the long-term suspension and expulsion rates for regular education students in the school district is statistically significant. In our comparison of long-term suspension and expulsion rates, we have set a .05 level of significance. This means, we are 95 percent confident that the differences between the rates are real (significant) and not due to random factors. However, the precision and reliability of this method is dependent upon having a large enough sample size to be representative of the school district's population and so, we also employ a minimum sample size (minimum N) of 10.

If the difference between the long-term suspension and expulsion rates for students with disabilities and the rates for nondisabled students by race/ethnicity group is statistically significant for a specific school district, the school district is flagged for additional investigation to determine if a significant discrepancy is occurring in the rates of long-term suspensions and expulsions of students with disabilities in a school year. This includes validation of the school district's long-term suspension and expulsion data and a systematic review of complaints/mediation/due process information, compliance monitoring and program data.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

District Name

0657 Saco H S

INDICATOR #5 - Education Environment Rates

Percent of children with IEPs, aged 6-21,

5A. Removed from the regular class less than 21% of the school day.

5B. Removed from regular class greater than 60% of the day; or

5C. Served in public or private separate schools, residential placements, or homebound or hospital placements.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 5A	Education Environment Rate -- Reg Class > 80% of day	*	*	*	*	*	*	*
Indicator 5B	Education Environment Rate -- Reg Class < 40% of day	*	*	*	*	*	*	*
Indicator 5C	Education Environment Rate -- Sep Schls	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

0657 Saco H S

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

0657 Saco H S

INDICATOR #12 - Children Referred By Part C

Percent of children referred by Part C, prior to age 3, who are found eligible for Part B, and who have an IEP developed and implemented by their third birthday.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 12	Children referred by Part C	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI Compliance Monitoring

Indicator Data Note:

NA = Data not available as district was not monitored in the year in which data is being reported.

District performance for this indicator is only for districts monitored in the year in which data is being reported. The OPI reviews a sample of student records as part of its compliance monitoring activities to determine if children referred by a Part C Service Provider Agency have an IEP in place at the age of three. A review of student records is to identify noncompliance issues with respect to 34 CFR 300.111 Child Find or 34 CFR 300.124 Transition of children from the Part C program to preschool programs.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0392 Sand Springs Elem

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0392 Sand Springs Elem

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0392 Sand Springs Elem

INDICATOR #3 - Statewide Assessments

Participation and performance of children with disabilities on statewide assessments:

3A. Has District met the state's AYP objectives for progress for disability subgroup?

3B. Participation rate for children with IEPs in statewide assessments.

3C. Proficiency rate for children with IEPs against grade-level standards and alternate achievement standards.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 3A	Assessment -- Meeting AYP Objectives	NA	NA	NA	NA	NA	NA	NA
Indicator 3B	Assessment -- Participation Rates	NA	NA	NA	NA	NA	NA	NA
Indicator 3C	Assessment -- Proficiency Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

Percent of children with IEPs, aged 6-21,

5A. Removed from the regular class less than 21% of the school day.

5B. Removed from regular class greater than 60% of the day; or

5C. Served in public or private separate schools, residential placements, or homebound or hospital placements.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 5A	Education Environment Rate -- Reg Class > 80% of day	*	*	*	*	*	*	*
Indicator 5B	Education Environment Rate -- Reg Class < 40% of day	*	*	*	*	*	*	*
Indicator 5C	Education Environment Rate -- Sep Schls	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

District Name 0392 Sand Springs Elem

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0392 Sand Springs Elem

INDICATOR #12 - Children Referred By Part C

Percent of children referred by Part C, prior to age 3, who are found eligible for Part B, and who have an IEP developed and implemented by their third birthday.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 12	Children referred by Part C	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI Compliance Monitoring

Indicator Data Note:

NA = Data not available as district was not monitored in the year in which data is being reported.

District performance for this indicator is only for districts monitored in the year in which data is being reported. The OPI reviews a sample of student records as part of its compliance monitoring activities to determine if children referred by a Part C Service Provider Agency have an IEP in place at the age of three. A review of student records is to identify noncompliance issues with respect to 34 CFR 300.111 Child Find or 34 CFR 300.124 Transition of children from the Part C program to preschool programs.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0747 Savage Elem

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0747 Savage Elem

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0747 Savage Elem

INDICATOR #3 - Statewide Assessments

Participation and performance of children with disabilities on statewide assessments:

3A. Has District met the state's AYP objectives for progress for disability subgroup?

3B. Participation rate for children with IEPs in statewide assessments.

3C. Proficiency rate for children with IEPs against grade-level standards and alternate achievement standards.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 3A	Assessment -- Meeting AYP Objectives	*	*	*	*	*	*	*
Indicator 3B	Assessment -- Participation Rates	*	*	*	*	*	*	*
Indicator 3C	Assessment -- Proficiency Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0747 Savage Elem

INDICATOR #4 - Suspension and Expulsion Rates

Districts who have been identified as having a significant discrepancy in long-term suspension and expulsion rates.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 4A	Suspension and Expulsion Rates	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

OPI School Discipline Data Collection reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The assessment of a school district's performance based on long-term suspension and expulsion rates is done by comparing the suspension and expulsion rates for students with disabilities to the long-term suspension and expulsion rates for nondisabled students. Long-term suspension or expulsion is defined as a suspension or expulsion that results in removal of a student, out-of-school, for greater than 10 school days or a student with multiple short-term (10 school days or less) out-of-school suspensions or expulsions that sum to greater than 10 school days during the school year.

For each racial/ethnic group, a statistical test of the difference between proportions is conducted to determine if the size of difference between the school district's special education long-term suspension and expulsion rates and the long-term suspension and expulsion rates for regular education students in the school district is statistically significant. In our comparison of long-term suspension and expulsion rates, we have set a .05 level of significance. This means, we are 95 percent confident that the differences between the rates are real (significant) and not due to random factors. However, the precision and reliability of this method is dependent upon having a large enough sample size to be representative of the school district's population and so, we also employ a minimum sample size (minimum N) of 10.

If the difference between the long-term suspension and expulsion rates for students with disabilities and the rates for nondisabled students by race/ethnicity group is statistically significant for a specific school district, the school district is flagged for additional investigation to determine if a significant discrepancy is occurring in the rates of long-term suspensions and expulsions of students with disabilities in a school year. This includes validation of the school district's long-term suspension and expulsion data and a systematic review of complaints/mediation/due process information, compliance monitoring and program data.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0747 Savage Elem

INDICATOR #5 - Education Environment Rates

Percent of children with IEPs, aged 6-21,

5A. Removed from the regular class less than 21% of the school day.

5B. Removed from regular class greater than 60% of the day; or

5C. Served in public or private separate schools, residential placements, or homebound or hospital placements.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 5A	Education Environment Rate -- Reg Class > 80% of day	*	*	*	*	*	*	*
Indicator 5B	Education Environment Rate -- Reg Class < 40% of day	*	*	*	*	*	*	*
Indicator 5C	Education Environment Rate -- Sep Schls	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0747 Savage Elem

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

Indicator Data Source:

OPI Compliance Monitoring

Indicator Data Note:

NA = Data not available as district was not monitored in the year in which data is being reported.

District performance for this indicator is only for districts monitored in the year in which data is being reported. The OPI reviews a sample of student records as part of its compliance monitoring activities to determine if children referred by a Part C Service Provider Agency have an IEP in place at the age of three. A review of student records is to identify noncompliance issues with respect to 34 CFR 300.111 Child Find or 34 CFR 300.124 Transition of children from the Part C program to preschool programs.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0748 Savage H S

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0748 Savage H S

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

0748 Savage H S

INDICATOR #3 - Statewide Assessments

Participation and performance of children with disabilities on statewide assessments:

3A. Has District met the state's AYP objectives for progress for disability subgroup?

3B. Participation rate for children with IEPs in statewide assessments.

3C. Proficiency rate for children with IEPs against grade-level standards and alternate achievement standards.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 3A	Assessment -- Meeting AYP Objectives	NA	NA	NA	NA	NA	NA	NA
Indicator 3B	Assessment -- Participation Rates	NA	NA	NA	NA	NA	NA	NA
Indicator 3C	Assessment -- Proficiency Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0748 Savage H S

INDICATOR #4 - Suspension and Expulsion Rates

Districts who have been identified as having a significant discrepancy in long-term suspension and expulsion rates.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 4A	Suspension and Expulsion Rates	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

OPI School Discipline Data Collection reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The assessment of a school district's performance based on long-term suspension and expulsion rates is done by comparing the suspension and expulsion rates for students with disabilities to the long-term suspension and expulsion rates for nondisabled students. Long-term suspension or expulsion is defined as a suspension or expulsion that results in removal of a student, out-of-school, for greater than 10 school days or a student with multiple short-term (10 school days or less) out-of-school suspensions or expulsions that sum to greater than 10 school days during the school year.

For each racial/ethnic group, a statistical test of the difference between proportions is conducted to determine if the size of difference between the school district's special education long-term suspension and expulsion rates and the long-term suspension and expulsion rates for regular education students in the school district is statistically significant. In our comparison of long-term suspension and expulsion rates, we have set a .05 level of significance. This means, we are 95 percent confident that the differences between the rates are real (significant) and not due to random factors. However, the precision and reliability of this method is dependent upon having a large enough sample size to be representative of the school district's population and so, we also employ a minimum sample size (minimum N) of 10.

If the difference between the long-term suspension and expulsion rates for students with disabilities and the rates for nondisabled students by race/ethnicity group is statistically significant for a specific school district, the school district is flagged for additional investigation to determine if a significant discrepancy is occurring in the rates of long-term suspensions and expulsions of students with disabilities in a school year. This includes validation of the school district's long-term suspension and expulsion data and a systematic review of complaints/mediation/due process information, compliance monitoring and program data.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0748 Savage H S

INDICATOR #5 - Education Environment Rates

Percent of children with IEPs, aged 6-21,

5A. Removed from the regular class less than 21% of the school day.

5B. Removed from regular class greater than 60% of the day; or

5C. Served in public or private separate schools, residential placements, or homebound or hospital placements.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 5A	Education Environment Rate -- Reg Class > 80% of day	*	*	*	*	*	*	*
Indicator 5B	Education Environment Rate -- Reg Class < 40% of day	*	*	*	*	*	*	*
Indicator 5C	Education Environment Rate -- Sep Schls	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0748 Savage H S

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0748 Savage H S

INDICATOR #12 - Children Referred By Part C

Percent of children referred by Part C, prior to age 3, who are found eligible for Part B, and who have an IEP developed and implemented by their third birthday.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 12	Children referred by Part C	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI Compliance Monitoring

Indicator Data Note:

NA = Data not available as district was not monitored in the year in which data is being reported.

District performance for this indicator is only for districts monitored in the year in which data is being reported. The OPI reviews a sample of student records as part of its compliance monitoring activities to determine if children referred by a Part C Service Provider Agency have an IEP in place at the age of three. A review of student records is to identify noncompliance issues with respect to 34 CFR 300.111 Child Find or 34 CFR 300.124 Transition of children from the Part C program to preschool programs.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0194 Scobey K-12 Schools

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0194 Scobey K-12 Schools

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	18	0	0 (0%)	0	0	0.058 (5.8%)	Met

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

INDICATOR #3 - Statewide Assessments

Participation and performance of children with disabilities on statewide assessments:

3A. Has District met the state's AYP objectives for progress for disability subgroup?

3B. Participation rate for children with IEPs in statewide assessments.

3C. Proficiency rate for children with IEPs against grade-level standards and alternate achievement standards.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 3A	Assessment -- Meeting AYP Objectives	*	*	*	*	*	*	*
Indicator 3B	Assessment -- Participation Rates	56	56	1 (100%)	0.93582	1.00001	0.98 (98%)	Met
Indicator 3C	Assessment -- Proficiency Rates	56	26	0.46 (46%)	0.28988	0.64788	0.295 (29.5%)	Met

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0194 Scobey K-12 Schools

INDICATOR #4 - Suspension and Expulsion Rates

Districts who have been identified as having a significant discrepancy in long-term suspension and expulsion rates.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 4A	Suspension and Expulsion Rates	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

OPI School Discipline Data Collection reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The assessment of a school district's performance based on long-term suspension and expulsion rates is done by comparing the suspension and expulsion rates for students with disabilities to the long-term suspension and expulsion rates for nondisabled students. Long-term suspension or expulsion is defined as a suspension or expulsion that results in removal of a student, out-of-school, for greater than 10 school days or a student with multiple short-term (10 school days or less) out-of-school suspensions or expulsions that sum to greater than 10 school days during the school year.

For each racial/ethnic group, a statistical test of the difference between proportions is conducted to determine if the size of difference between the school district's special education long-term suspension and expulsion rates and the long-term suspension and expulsion rates for regular education students in the school district is statistically significant. In our comparison of long-term suspension and expulsion rates, we have set a .05 level of significance. This means, we are 95 percent confident that the differences between the rates are real (significant) and not due to random factors. However, the precision and reliability of this method is dependent upon having a large enough sample size to be representative of the school district's population and so, we also employ a minimum sample size (minimum N) of 10.

If the difference between the long-term suspension and expulsion rates for students with disabilities and the rates for nondisabled students by race/ethnicity group is statistically significant for a specific school district, the school district is flagged for additional investigation to determine if a significant discrepancy is occurring in the rates of long-term suspensions and expulsions of students with disabilities in a school year. This includes validation of the school district's long-term suspension and expulsion data and a systematic review of complaints/mediation/due process information, compliance monitoring and program data.

Indicator 5B	Education Environment Rate -- Reg Class < 40% of day	52	0	0 (0%)	0	0	0.12 (12%)	Met
Indicator 5C	Education Environment Rate -- Sep Schls	52	0	0 (0%)	0	0	0.018 (1.8%)	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0194 Scobey K-12 Schools

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

Linda McCulloch, Superintendent
Montana Office of Public Instruction

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0194 Scobey K-12 Schools

INDICATOR #12 - Children Referred By Part C

Percent of children referred by Part C, prior to age 3, who are found eligible for Part B, and who have an IEP developed and implemented by their third birthday.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 12	Children referred by Part C	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI Compliance Monitoring

Indicator Data Note:

NA = Data not available as district was not monitored in the year in which data is being reported.

District performance for this indicator is only for districts monitored in the year in which data is being reported. The OPI reviews a sample of student records as part of its compliance monitoring activities to determine if children referred by a Part C Service Provider Agency have an IEP in place at the age of three. A review of student records is to identify noncompliance issues with respect to 34 CFR 300.111 Child Find or 34 CFR 300.124 Transition of children from the Part C program to preschool programs.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0597 Seeley Lake Elem

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0597 Seeley Lake Elem

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0597 Seeley Lake Elem

INDICATOR #3 - Statewide Assessments

Participation and performance of children with disabilities on statewide assessments:

3A. Has District met the state's AYP objectives for progress for disability subgroup?

3B. Participation rate for children with IEPs in statewide assessments.

3C. Proficiency rate for children with IEPs against grade-level standards and alternate achievement standards.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 3A	Assessment -- Meeting AYP Objectives	*	*	*	*	*	*	*
Indicator 3B	Assessment -- Participation Rates	64	46	0.72 (72%)	0.57594	0.82785	0.98 (98%)	Not Met
Indicator 3C	Assessment -- Proficiency Rates	64	12	0.19 (19%)	0.05664	0.46987	0.295 (29.5%)	Met

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0597 Seeley Lake Elem

INDICATOR #4 - Suspension and Expulsion Rates

Districts who have been identified as having a significant discrepancy in long-term suspension and expulsion rates.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 4A	Suspension and Expulsion Rates	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

OPI School Discipline Data Collection reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The assessment of a school district's performance based on long-term suspension and expulsion rates is done by comparing the suspension and expulsion rates for students with disabilities to the long-term suspension and expulsion rates for nondisabled students. Long-term suspension or expulsion is defined as a suspension or expulsion that results in removal of a student, out-of-school, for greater than 10 school days or a student with multiple short-term (10 school days or less) out-of-school suspensions or expulsions that sum to greater than 10 school days during the school year.

For each racial/ethnic group, a statistical test of the difference between proportions is conducted to determine if the size of difference between the school district's special education long-term suspension and expulsion rates and the long-term suspension and expulsion rates for regular education students in the school district is statistically significant. In our comparison of long-term suspension and expulsion rates, we have set a .05 level of significance. This means, we are 95 percent confident that the differences between the rates are real (significant) and not due to random factors. However, the precision and reliability of this method is dependent upon having a large enough sample size to be representative of the school district's population and so, we also employ a minimum sample size (minimum N) of 10.

If the difference between the long-term suspension and expulsion rates for students with disabilities and the rates for nondisabled students by race/ethnicity group is statistically significant for a specific school district, the school district is flagged for additional investigation to determine if a significant discrepancy is occurring in the rates of long-term suspensions and expulsions of students with disabilities in a school year. This includes validation of the school district's long-term suspension and expulsion data and a systematic review of complaints/mediation/due process information, compliance monitoring and program data.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0597 Seeley Lake Elem

INDICATOR #5 - Education Environment Rates

Percent of children with IEPs, aged 6-21,

5A. Removed from the regular class less than 21% of the school day.

5B. Removed from regular class greater than 60% of the day; or

5C. Served in public or private separate schools, residential placements, or homebound or hospital placements.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 5A	Education Environment Rate -- Reg Class > 80% of day	40	35	0.88 (88%)	0.7275	0.94834	0.5 (50%)	Met
Indicator 5B	Education Environment Rate -- Reg Class < 40% of day	40	2	0.05 (5%)	0.00116	0.69061	0.12 (12%)	Met
Indicator 5C	Education Environment Rate -- Sep Schls	40	0	0 (0%)	0	0	0.018 (1.8%)	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0597 Seeley Lake Elem

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0597 Seeley Lake Elem

INDICATOR #12 - Children Referred By Part C

Percent of children referred by Part C, prior to age 3, who are found eligible for Part B, and who have an IEP developed and implemented by their third birthday.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 12	Children referred by Part C	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI Compliance Monitoring

Indicator Data Note:

NA = Data not available as district was not monitored in the year in which data is being reported.

District performance for this indicator is only for districts monitored in the year in which data is being reported. The OPI reviews a sample of student records as part of its compliance monitoring activities to determine if children referred by a Part C Service Provider Agency have an IEP in place at the age of three. A review of student records is to identify noncompliance issues with respect to 34 CFR 300.111 Child Find or 34 CFR 300.124 Transition of children from the Part C program to preschool programs.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0947 Shawmut Elem

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0947 Shawmut Elem

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0947 Shawmut Elem

INDICATOR #3 - Statewide Assessments

Participation and performance of children with disabilities on statewide assessments:

3A. Has District met the state's AYP objectives for progress for disability subgroup?

3B. Participation rate for children with IEPs in statewide assessments.

3C. Proficiency rate for children with IEPs against grade-level standards and alternate achievement standards.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 3A	Assessment -- Meeting AYP Objectives	NA	NA	NA	NA	NA	NA	NA
Indicator 3B	Assessment -- Participation Rates	NA	NA	NA	NA	NA	NA	NA
Indicator 3C	Assessment -- Proficiency Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0947 Shawmut Elem

INDICATOR #4 - Suspension and Expulsion Rates

Districts who have been identified as having a significant discrepancy in long-term suspension and expulsion rates.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 4A	Suspension and Expulsion Rates	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

OPI School Discipline Data Collection reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The assessment of a school district's performance based on long-term suspension and expulsion rates is done by comparing the suspension and expulsion rates for students with disabilities to the long-term suspension and expulsion rates for nondisabled students. Long-term suspension or expulsion is defined as a suspension or expulsion that results in removal of a student, out-of-school, for greater than 10 school days or a student with multiple short-term (10 school days or less) out-of-school suspensions or expulsions that sum to greater than 10 school days during the school year.

For each racial/ethnic group, a statistical test of the difference between proportions is conducted to determine if the size of difference between the school district's special education long-term suspension and expulsion rates and the long-term suspension and expulsion rates for regular education students in the school district is statistically significant. In our comparison of long-term suspension and expulsion rates, we have set a .05 level of significance. This means, we are 95 percent confident that the differences between the rates are real (significant) and not due to random factors. However, the precision and reliability of this method is dependent upon having a large enough sample size to be representative of the school district's population and so, we also employ a minimum sample size (minimum N) of 10.

If the difference between the long-term suspension and expulsion rates for students with disabilities and the rates for nondisabled students by race/ethnicity group is statistically significant for a specific school district, the school district is flagged for additional investigation to determine if a significant discrepancy is occurring in the rates of long-term suspensions and expulsions of students with disabilities in a school year. This includes validation of the school district's long-term suspension and expulsion data and a systematic review of complaints/mediation/due process information, compliance monitoring and program data.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0947 Shawmut Elem

INDICATOR #5 - Education Environment Rates

Percent of children with IEPs, aged 6-21,

5A. Removed from the regular class less than 21% of the school day.

5B. Removed from regular class greater than 60% of the day; or

5C. Served in public or private separate schools, residential placements, or homebound or hospital placements.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 5A	Education Environment Rate -- Reg Class > 80% of day	*	*	*	*	*	*	*
Indicator 5B	Education Environment Rate -- Reg Class < 40% of day	*	*	*	*	*	*	*
Indicator 5C	Education Environment Rate -- Sep Schls	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0947 Shawmut Elem

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0947 Shawmut Elem

INDICATOR #12 - Children Referred By Part C

Percent of children referred by Part C, prior to age 3, who are found eligible for Part B, and who have an IEP developed and implemented by their third birthday.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 12	Children referred by Part C	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI Compliance Monitoring

Indicator Data Note:

NA = Data not available as district was not monitored in the year in which data is being reported.

District performance for this indicator is only for districts monitored in the year in which data is being reported. The OPI reviews a sample of student records as part of its compliance monitoring activities to determine if children referred by a Part C Service Provider Agency have an IEP in place at the age of three. A review of student records is to identify noncompliance issues with respect to 34 CFR 300.111 Child Find or 34 CFR 300.124 Transition of children from the Part C program to preschool programs.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0910 Shelby Elem

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0910 Shelby Elem

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0910 Shelby Elem

INDICATOR #3 - Statewide Assessments

Participation and performance of children with disabilities on statewide assessments:

3A. Has District met the state's AYP objectives for progress for disability subgroup?

3B. Participation rate for children with IEPs in statewide assessments.

3C. Proficiency rate for children with IEPs against grade-level standards and alternate achievement standards.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 3A	Assessment -- Meeting AYP Objectives			(%)			NA	Not Met
Indicator 3B	Assessment -- Participation Rates	100	98	0.98 (98%)	0.92924	0.99457	0.98 (98%)	Met
Indicator 3C	Assessment -- Proficiency Rates	100	27	0.27 (27%)	0.13935	0.45793	0.295 (29.5%)	Met

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0910 Shelby Elem

INDICATOR #4 - Suspension and Expulsion Rates

Districts who have been identified as having a significant discrepancy in long-term suspension and expulsion rates.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 4A	Suspension and Expulsion Rates	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

OPI School Discipline Data Collection reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The assessment of a school district's performance based on long-term suspension and expulsion rates is done by comparing the suspension and expulsion rates for students with disabilities to the long-term suspension and expulsion rates for nondisabled students. Long-term suspension or expulsion is defined as a suspension or expulsion that results in removal of a student, out-of-school, for greater than 10 school days or a student with multiple short-term (10 school days or less) out-of-school suspensions or expulsions that sum to greater than 10 school days during the school year.

For each racial/ethnic group, a statistical test of the difference between proportions is conducted to determine if the size of difference between the school district's special education long-term suspension and expulsion rates and the long-term suspension and expulsion rates for regular education students in the school district is statistically significant. In our comparison of long-term suspension and expulsion rates, we have set a .05 level of significance. This means, we are 95 percent confident that the differences between the rates are real (significant) and not due to random factors. However, the precision and reliability of this method is dependent upon having a large enough sample size to be representative of the school district's population and so, we also employ a minimum sample size (minimum N) of 10.

If the difference between the long-term suspension and expulsion rates for students with disabilities and the rates for nondisabled students by race/ethnicity group is statistically significant for a specific school district, the school district is flagged for additional investigation to determine if a significant discrepancy is occurring in the rates of long-term suspensions and expulsions of students with disabilities in a school year. This includes validation of the school district's long-term suspension and expulsion data and a systematic review of complaints/mediation/due process information, compliance monitoring and program data.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0910 Shelby Elem

INDICATOR #5 - Education Environment Rates

Percent of children with IEPs, aged 6-21,

5A. Removed from the regular class less than 21% of the school day.

5B. Removed from regular class greater than 60% of the day; or

5C. Served in public or private separate schools, residential placements, or homebound or hospital placements.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 5A	Education Environment Rate -- Reg Class > 80% of day	66	31	0.47 (47%)	0.30727	0.63879	0.5 (50%)	Met
Indicator 5B	Education Environment Rate -- Reg Class < 40% of day	66	2	0.03 (3%)	0.00039	0.67789	0.12 (12%)	Met
Indicator 5C	Education Environment Rate -- Sep Schls	66	0	0 (0%)	0	0	0.018 (1.8%)	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0910 Shelby Elem

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	12	7	0.58 (58%)	0.25884	0.84878	0.548 (54.8%)	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0910 Shelby Elem

INDICATOR #12 - Children Referred By Part C

Percent of children referred by Part C, prior to age 3, who are found eligible for Part B, and who have an IEP developed and implemented by their third birthday.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 12	Children referred by Part C	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI Compliance Monitoring

Indicator Data Note:

NA = Data not available as district was not monitored in the year in which data is being reported.

District performance for this indicator is only for districts monitored in the year in which data is being reported. The OPI reviews a sample of student records as part of its compliance monitoring activities to determine if children referred by a Part C Service Provider Agency have an IEP in place at the age of three. A review of student records is to identify noncompliance issues with respect to 34 CFR 300.111 Child Find or 34 CFR 300.124 Transition of children from the Part C program to preschool programs.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0911 Shelby H S

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

0911 Shelby H S

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	10	1	0.1 (10%)	0.00239	0.83231	0.058 (5.8%)	Met

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

0911 Shelby H S

INDICATOR #3 - Statewide Assessments

Participation and performance of children with disabilities on statewide assessments:

3A. Has District met the state's AYP objectives for progress for disability subgroup?

3B. Participation rate for children with IEPs in statewide assessments.

3C. Proficiency rate for children with IEPs against grade-level standards and alternate achievement standards.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 3A	Assessment -- Meeting AYP Objectives	*	*	*	*	*	*	*
Indicator 3B	Assessment -- Participation Rates	*	*	*	*	*	*	*
Indicator 3C	Assessment -- Proficiency Rates	*	*	*	*	*	*	*

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0911 Shelby H S

INDICATOR #4 - Suspension and Expulsion Rates

Districts who have been identified as having a significant discrepancy in long-term suspension and expulsion rates.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 4A	Suspension and Expulsion Rates	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

OPI School Discipline Data Collection reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The assessment of a school district's performance based on long-term suspension and expulsion rates is done by comparing the suspension and expulsion rates for students with disabilities to the long-term suspension and expulsion rates for nondisabled students. Long-term suspension or expulsion is defined as a suspension or expulsion that results in removal of a student, out-of-school, for greater than 10 school days or a student with multiple short-term (10 school days or less) out-of-school suspensions or expulsions that sum to greater than 10 school days during the school year.

For each racial/ethnic group, a statistical test of the difference between proportions is conducted to determine if the size of difference between the school district's special education long-term suspension and expulsion rates and the long-term suspension and expulsion rates for regular education students in the school district is statistically significant. In our comparison of long-term suspension and expulsion rates, we have set a .05 level of significance. This means, we are 95 percent confident that the differences between the rates are real (significant) and not due to random factors. However, the precision and reliability of this method is dependent upon having a large enough sample size to be representative of the school district's population and so, we also employ a minimum sample size (minimum N) of 10.

If the difference between the long-term suspension and expulsion rates for students with disabilities and the rates for nondisabled students by race/ethnicity group is statistically significant for a specific school district, the school district is flagged for additional investigation to determine if a significant discrepancy is occurring in the rates of long-term suspensions and expulsions of students with disabilities in a school year. This includes validation of the school district's long-term suspension and expulsion data and a systematic review of complaints/mediation/due process information, compliance monitoring and program data.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0911 Shelby H S

INDICATOR #5 - Education Environment Rates

Percent of children with IEPs, aged 6-21,

5A. Removed from the regular class less than 21% of the school day.

5B. Removed from regular class greater than 60% of the day; or

5C. Served in public or private separate schools, residential placements, or homebound or hospital placements.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 5A	Education Environment Rate -- Reg Class > 80% of day	10	5	0.5 (50%)	0.17039	0.8296	0.5 (50%)	Met
Indicator 5B	Education Environment Rate -- Reg Class < 40% of day	10	0	0 (0%)	0	0	0.12 (12%)	Met
Indicator 5C	Education Environment Rate -- Sep Schls	10	0	0 (0%)	0	0	0.018 (1.8%)	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0911 Shelby H S

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

OPI Compliance Monitoring

Indicator Data Note:

NA = Data not available as district was not monitored in the year in which data is being reported.

District performance for this indicator is only for districts monitored in the year in which data is being reported. The OPI reviews a sample of student records as part of its compliance monitoring activities to determine if children referred by a Part C Service Provider Agency have an IEP in place at the age of three. A review of student records is to identify noncompliance issues with respect to 34 CFR 300.111 Child Find or 34 CFR 300.124 Transition of children from the Part C program to preschool programs.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0985 Shepherd Elem

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

0985 Shepherd Elem

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

0985 Shepherd Elem

INDICATOR #3 - Statewide Assessments

Participation and performance of children with disabilities on statewide assessments:

3A. Has District met the state's AYP objectives for progress for disability subgroup?

3B. Participation rate for children with IEPs in statewide assessments.

3C. Proficiency rate for children with IEPs against grade-level standards and alternate achievement standards.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 3A	Assessment -- Meeting AYP Objectives	NA	NA	NA	NA	NA	NA	Met
Indicator 3B	Assessment -- Participation Rates	104	104	1 (100%)	0.96439	1	0.98 (98%)	Met
Indicator 3C	Assessment -- Proficiency Rates	104	36	0.35 (35%)	0.21251	0.50946	0.295 (29.5%)	Met

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0985 Shepherd Elem

INDICATOR #4 - Suspension and Expulsion Rates

Districts who have been identified as having a significant discrepancy in long-term suspension and expulsion rates.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 4A	Suspension and Expulsion Rates	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

OPI School Discipline Data Collection reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The assessment of a school district's performance based on long-term suspension and expulsion rates is done by comparing the suspension and expulsion rates for students with disabilities to the long-term suspension and expulsion rates for nondisabled students. Long-term suspension or expulsion is defined as a suspension or expulsion that results in removal of a student, out-of-school, for greater than 10 school days or a student with multiple short-term (10 school days or less) out-of-school suspensions or expulsions that sum to greater than 10 school days during the school year.

For each racial/ethnic group, a statistical test of the difference between proportions is conducted to determine if the size of difference between the school district's special education long-term suspension and expulsion rates and the long-term suspension and expulsion rates for regular education students in the school district is statistically significant. In our comparison of long-term suspension and expulsion rates, we have set a .05 level of significance. This means, we are 95 percent confident that the differences between the rates are real (significant) and not due to random factors. However, the precision and reliability of this method is dependent upon having a large enough sample size to be representative of the school district's population and so, we also employ a minimum sample size (minimum N) of 10.

If the difference between the long-term suspension and expulsion rates for students with disabilities and the rates for nondisabled students by race/ethnicity group is statistically significant for a specific school district, the school district is flagged for additional investigation to determine if a significant discrepancy is occurring in the rates of long-term suspensions and expulsions of students with disabilities in a school year. This includes validation of the school district's long-term suspension and expulsion data and a systematic review of complaints/mediation/due process information, compliance monitoring and program data.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0985 Shepherd Elem

INDICATOR #5 - Education Environment Rates

Percent of children with IEPs, aged 6-21,

5A. Removed from the regular class less than 21% of the school day.

5B. Removed from regular class greater than 60% of the day; or

5C. Served in public or private separate schools, residential placements, or homebound or hospital placements.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 5A	Education Environment Rate -- Reg Class > 80% of day	69	43	0.62 (62%)	0.47394	0.75223	0.5 (50%)	Met
Indicator 5B	Education Environment Rate -- Reg Class < 40% of day	69	0	0 (0%)	0	0	0.12 (12%)	Met
Indicator 5C	Education Environment Rate -- Sep Schls	69	1	0.01 (1%)	-0.00002	0.7994	0.018 (1.8%)	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0985 Shepherd Elem

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	15	0	0 (0%)	0	0	0.548 (54.8%)	Not Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0985 Shepherd Elem

INDICATOR #12 - Children Referred By Part C

Percent of children referred by Part C, prior to age 3, who are found eligible for Part B, and who have an IEP developed and implemented by their third birthday.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 12	Children referred by Part C	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI Compliance Monitoring

Indicator Data Note:

NA = Data not available as district was not monitored in the year in which data is being reported.

District performance for this indicator is only for districts monitored in the year in which data is being reported. The OPI reviews a sample of student records as part of its compliance monitoring activities to determine if children referred by a Part C Service Provider Agency have an IEP in place at the age of three. A review of student records is to identify noncompliance issues with respect to 34 CFR 300.111 Child Find or 34 CFR 300.124 Transition of children from the Part C program to preschool programs.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0986 Shepherd H S

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0986 Shepherd H S

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	26	2	0.08 (8%)	0.00279	0.70742	0.058 (5.8%)	Met

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

0986 Shepherd H S

INDICATOR #3 - Statewide Assessments

Participation and performance of children with disabilities on statewide assessments:

3A. Has District met the state's AYP objectives for progress for disability subgroup?

3B. Participation rate for children with IEPs in statewide assessments.

3C. Proficiency rate for children with IEPs against grade-level standards and alternate achievement standards.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 3A	Assessment -- Meeting AYP Objectives	*	*	*	*	*	*	*
Indicator 3B	Assessment -- Participation Rates	18	16	0.89 (89%)	0.65617	0.97107	0.98 (98%)	Not Met
Indicator 3C	Assessment -- Proficiency Rates	*	*	*	*	*	*	*

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

0986 Shepherd H S

INDICATOR #4 - Suspension and Expulsion Rates

Districts who have been identified as having a significant discrepancy in long-term suspension and expulsion rates.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 4A	Suspension and Expulsion Rates	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

OPI School Discipline Data Collection reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The assessment of a school district's performance based on long-term suspension and expulsion rates is done by comparing the suspension and expulsion rates for students with disabilities to the long-term suspension and expulsion rates for nondisabled students. Long-term suspension or expulsion is defined as a suspension or expulsion that results in removal of a student, out-of-school, for greater than 10 school days or a student with multiple short-term (10 school days or less) out-of-school suspensions or expulsions that sum to greater than 10 school days during the school year.

For each racial/ethnic group, a statistical test of the difference between proportions is conducted to determine if the size of difference between the school district's special education long-term suspension and expulsion rates and the long-term suspension and expulsion rates for regular education students in the school district is statistically significant. In our comparison of long-term suspension and expulsion rates, we have set a .05 level of significance. This means, we are 95 percent confident that the differences between the rates are real (significant) and not due to random factors. However, the precision and reliability of this method is dependent upon having a large enough sample size to be representative of the school district's population and so, we also employ a minimum sample size (minimum N) of 10.

If the difference between the long-term suspension and expulsion rates for students with disabilities and the rates for nondisabled students by race/ethnicity group is statistically significant for a specific school district, the school district is flagged for additional investigation to determine if a significant discrepancy is occurring in the rates of long-term suspensions and expulsions of students with disabilities in a school year. This includes validation of the school district's long-term suspension and expulsion data and a systematic review of complaints/mediation/due process information, compliance monitoring and program data.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0986 Shepherd H S

INDICATOR #5 - Education Environment Rates

Percent of children with IEPs, aged 6-21,

5A. Removed from the regular class less than 21% of the school day.

5B. Removed from regular class greater than 60% of the day; or

5C. Served in public or private separate schools, residential placements, or homebound or hospital placements.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 5A	Education Environment Rate -- Reg Class > 80% of day	26	15	0.58 (58%)	0.3376	0.78488	0.5 (50%)	Met
Indicator 5B	Education Environment Rate -- Reg Class < 40% of day	26	1	0.04 (4%)	0.00029	0.80898	0.12 (12%)	Met
Indicator 5C	Education Environment Rate -- Sep Schls	26	0	0 (0%)	0	0	0.018 (1.8%)	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0986 Shepherd H S

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0986 Shepherd H S

INDICATOR #12 - Children Referred By Part C

Percent of children referred by Part C, prior to age 3, who are found eligible for Part B, and who have an IEP developed and implemented by their third birthday.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 12	Children referred by Part C	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI Compliance Monitoring

Indicator Data Note:

NA = Data not available as district was not monitored in the year in which data is being reported.

District performance for this indicator is only for districts monitored in the year in which data is being reported. The OPI reviews a sample of student records as part of its compliance monitoring activities to determine if children referred by a Part C Service Provider Agency have an IEP in place at the age of three. A review of student records is to identify noncompliance issues with respect to 34 CFR 300.111 Child Find or 34 CFR 300.124 Transition of children from the Part C program to preschool programs.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0537 Sheridan Elem

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0537 Sheridan Elem

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0537 Sheridan Elem

INDICATOR #3 - Statewide Assessments

Participation and performance of children with disabilities on statewide assessments:

3A. Has District met the state's AYP objectives for progress for disability subgroup?

3B. Participation rate for children with IEPs in statewide assessments.

3C. Proficiency rate for children with IEPs against grade-level standards and alternate achievement standards.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 3A	Assessment -- Meeting AYP Objectives	*	*	*	*	*	*	*
Indicator 3B	Assessment -- Participation Rates	20	18	0.9 (90%)	0.68552	0.97382	0.98 (98%)	Not Met
Indicator 3C	Assessment -- Proficiency Rates	*	*	*	*	*	*	*

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0537 Sheridan Elem

INDICATOR #4 - Suspension and Expulsion Rates

Districts who have been identified as having a significant discrepancy in long-term suspension and expulsion rates.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 4A	Suspension and Expulsion Rates	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

OPI School Discipline Data Collection reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The assessment of a school district's performance based on long-term suspension and expulsion rates is done by comparing the suspension and expulsion rates for students with disabilities to the long-term suspension and expulsion rates for nondisabled students. Long-term suspension or expulsion is defined as a suspension or expulsion that results in removal of a student, out-of-school, for greater than 10 school days or a student with multiple short-term (10 school days or less) out-of-school suspensions or expulsions that sum to greater than 10 school days during the school year.

For each racial/ethnic group, a statistical test of the difference between proportions is conducted to determine if the size of difference between the school district's special education long-term suspension and expulsion rates and the long-term suspension and expulsion rates for regular education students in the school district is statistically significant. In our comparison of long-term suspension and expulsion rates, we have set a .05 level of significance. This means, we are 95 percent confident that the differences between the rates are real (significant) and not due to random factors. However, the precision and reliability of this method is dependent upon having a large enough sample size to be representative of the school district's population and so, we also employ a minimum sample size (minimum N) of 10.

If the difference between the long-term suspension and expulsion rates for students with disabilities and the rates for nondisabled students by race/ethnicity group is statistically significant for a specific school district, the school district is flagged for additional investigation to determine if a significant discrepancy is occurring in the rates of long-term suspensions and expulsions of students with disabilities in a school year. This includes validation of the school district's long-term suspension and expulsion data and a systematic review of complaints/mediation/due process information, compliance monitoring and program data.

INDICATOR #5 - Education Environment Rates

Percent of children with IEPs, aged 6-21,

5A. Removed from the regular class less than 21% of the school day.

5B. Removed from regular class greater than 60% of the day; or

5C. Served in public or private separate schools, residential placements, or homebound or hospital placements.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 5A	Education Environment Rate -- Reg Class > 80% of day	12	7	0.58 (58%)	0.25884	0.84878	0.5 (50%)	Met
Indicator 5B	Education Environment Rate -- Reg Class < 40% of day	12	0	0 (0%)	0	0	0.12 (12%)	Met
Indicator 5C	Education Environment Rate -- Sep Schls	12	0	0 (0%)	0	0	0.018 (1.8%)	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

Indicator 6	Preschool Education Environment Rate	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0537 Sheridan Elem

INDICATOR #12 - Children Referred By Part C

Percent of children referred by Part C, prior to age 3, who are found eligible for Part B, and who have an IEP developed and implemented by their third birthday.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 12	Children referred by Part C	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI Compliance Monitoring

Indicator Data Note:

NA = Data not available as district was not monitored in the year in which data is being reported.

District performance for this indicator is only for districts monitored in the year in which data is being reported. The OPI reviews a sample of student records as part of its compliance monitoring activities to determine if children referred by a Part C Service Provider Agency have an IEP in place at the age of three. A review of student records is to identify noncompliance issues with respect to 34 CFR 300.111 Child Find or 34 CFR 300.124 Transition of children from the Part C program to preschool programs.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0538 Sheridan H S

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0538 Sheridan H S

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

0538 Sheridan H S

INDICATOR #3 - Statewide Assessments

Participation and performance of children with disabilities on statewide assessments:

3A. Has District met the state's AYP objectives for progress for disability subgroup?

3B. Participation rate for children with IEPs in statewide assessments.

3C. Proficiency rate for children with IEPs against grade-level standards and alternate achievement standards.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 3A	Assessment -- Meeting AYP Objectives	NA	NA	NA	NA	NA	NA	NA
Indicator 3B	Assessment -- Participation Rates	NA	NA	NA	NA	NA	NA	NA
Indicator 3C	Assessment -- Proficiency Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0538 Sheridan H S

INDICATOR #4 - Suspension and Expulsion Rates

Districts who have been identified as having a significant discrepancy in long-term suspension and expulsion rates.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 4A	Suspension and Expulsion Rates	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

OPI School Discipline Data Collection reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The assessment of a school district's performance based on long-term suspension and expulsion rates is done by comparing the suspension and expulsion rates for students with disabilities to the long-term suspension and expulsion rates for nondisabled students. Long-term suspension or expulsion is defined as a suspension or expulsion that results in removal of a student, out-of-school, for greater than 10 school days or a student with multiple short-term (10 school days or less) out-of-school suspensions or expulsions that sum to greater than 10 school days during the school year.

For each racial/ethnic group, a statistical test of the difference between proportions is conducted to determine if the size of difference between the school district's special education long-term suspension and expulsion rates and the long-term suspension and expulsion rates for regular education students in the school district is statistically significant. In our comparison of long-term suspension and expulsion rates, we have set a .05 level of significance. This means, we are 95 percent confident that the differences between the rates are real (significant) and not due to random factors. However, the precision and reliability of this method is dependent upon having a large enough sample size to be representative of the school district's population and so, we also employ a minimum sample size (minimum N) of 10.

If the difference between the long-term suspension and expulsion rates for students with disabilities and the rates for nondisabled students by race/ethnicity group is statistically significant for a specific school district, the school district is flagged for additional investigation to determine if a significant discrepancy is occurring in the rates of long-term suspensions and expulsions of students with disabilities in a school year. This includes validation of the school district's long-term suspension and expulsion data and a systematic review of complaints/mediation/due process information, compliance monitoring and program data.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

0538 Sheridan H S

INDICATOR #5 - Education Environment Rates

Percent of children with IEPs, aged 6-21,

5A. Removed from the regular class less than 21% of the school day.

5B. Removed from regular class greater than 60% of the day; or

5C. Served in public or private separate schools, residential placements, or homebound or hospital placements.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 5A	Education Environment Rate -- Reg Class > 80% of day	*	*	*	*	*	*	*
Indicator 5B	Education Environment Rate -- Reg Class < 40% of day	*	*	*	*	*	*	*
Indicator 5C	Education Environment Rate -- Sep Schls	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0538 Sheridan H S

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

Indicator Data Note:

NA = Data not available as district was not monitored in the year in which data is being reported.

District performance for this indicator is only for districts monitored in the year in which data is being reported. The OPI reviews a sample of student records as part of its compliance monitoring activities to determine if children referred by a Part C Service Provider Agency have an IEP in place at the age of three. A review of student records is to identify noncompliance issues with respect to 34 CFR 300.111 Child Find or 34 CFR 300.124 Transition of children from the Part C program to preschool programs.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 1227 Shields Valley Elem

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 1227 Shields Valley Elem

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

INDICATOR #3 - Statewide Assessments

Participation and performance of children with disabilities on statewide assessments:

3A. Has District met the state's AYP objectives for progress for disability subgroup?

3B. Participation rate for children with IEPs in statewide assessments.

3C. Proficiency rate for children with IEPs against grade-level standards and alternate achievement standards.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 3A	Assessment -- Meeting AYP Objectives	*	*	*	*	*	*	*
Indicator 3B	Assessment -- Participation Rates	26	24	0.92 (92%)	0.74981	0.97963	0.98 (98%)	Not Met
Indicator 3C	Assessment -- Proficiency Rates	26	10	0.38 (38%)	0.15832	0.67494	0.295 (29.5%)	Met

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 1227 Shields Valley Elem

INDICATOR #4 - Suspension and Expulsion Rates

Districts who have been identified as having a significant discrepancy in long-term suspension and expulsion rates.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 4A	Suspension and Expulsion Rates	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

OPI School Discipline Data Collection reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The assessment of a school district's performance based on long-term suspension and expulsion rates is done by comparing the suspension and expulsion rates for students with disabilities to the long-term suspension and expulsion rates for nondisabled students. Long-term suspension or expulsion is defined as a suspension or expulsion that results in removal of a student, out-of-school, for greater than 10 school days or a student with multiple short-term (10 school days or less) out-of-school suspensions or expulsions that sum to greater than 10 school days during the school year.

For each racial/ethnic group, a statistical test of the difference between proportions is conducted to determine if the size of difference between the school district's special education long-term suspension and expulsion rates and the long-term suspension and expulsion rates for regular education students in the school district is statistically significant. In our comparison of long-term suspension and expulsion rates, we have set a .05 level of significance. This means, we are 95 percent confident that the differences between the rates are real (significant) and not due to random factors. However, the precision and reliability of this method is dependent upon having a large enough sample size to be representative of the school district's population and so, we also employ a minimum sample size (minimum N) of 10.

If the difference between the long-term suspension and expulsion rates for students with disabilities and the rates for nondisabled students by race/ethnicity group is statistically significant for a specific school district, the school district is flagged for additional investigation to determine if a significant discrepancy is occurring in the rates of long-term suspensions and expulsions of students with disabilities in a school year. This includes validation of the school district's long-term suspension and expulsion data and a systematic review of complaints/mediation/due process information, compliance monitoring and program data.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 1227 Shields Valley Elem

INDICATOR #5 - Education Environment Rates

Percent of children with IEPs, aged 6-21,

5A. Removed from the regular class less than 21% of the school day.

5B. Removed from regular class greater than 60% of the day; or

5C. Served in public or private separate schools, residential placements, or homebound or hospital placements.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 5A	Education Environment Rate -- Reg Class > 80% of day	14	11	0.79 (79%)	0.4903	0.93326	0.5 (50%)	Met
Indicator 5B	Education Environment Rate -- Reg Class < 40% of day	14	0	0 (0%)	0	0	0.12 (12%)	Met
Indicator 5C	Education Environment Rate -- Sep Schls	14	0	0 (0%)	0	0	0.018 (1.8%)	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 1227 Shields Valley Elem

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 1227 Shields Valley Elem

INDICATOR #12 - Children Referred By Part C

Percent of children referred by Part C, prior to age 3, who are found eligible for Part B, and who have an IEP developed and implemented by their third birthday.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 12	Children referred by Part C	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI Compliance Monitoring

Indicator Data Note:

NA = Data not available as district was not monitored in the year in which data is being reported.

District performance for this indicator is only for districts monitored in the year in which data is being reported. The OPI reviews a sample of student records as part of its compliance monitoring activities to determine if children referred by a Part C Service Provider Agency have an IEP in place at the age of three. A review of student records is to identify noncompliance issues with respect to 34 CFR 300.111 Child Find or 34 CFR 300.124 Transition of children from the Part C program to preschool programs.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 1228 Shields Valley H S

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 1228 Shields Valley H S

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 1228 Shields Valley H S

INDICATOR #3 - Statewide Assessments

Participation and performance of children with disabilities on statewide assessments:

3A. Has District met the state's AYP objectives for progress for disability subgroup?

3B. Participation rate for children with IEPs in statewide assessments.

3C. Proficiency rate for children with IEPs against grade-level standards and alternate achievement standards.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 3A	Assessment -- Meeting AYP Objectives	NA	NA	NA	NA	NA	NA	NA
Indicator 3B	Assessment -- Participation Rates	NA	NA	NA	NA	NA	NA	NA
Indicator 3C	Assessment -- Proficiency Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

District Name 1228 Shields Valley H S

INDICATOR #5 - Education Environment Rates

Percent of children with IEPs, aged 6-21,

5A. Removed from the regular class less than 21% of the school day.

5B. Removed from regular class greater than 60% of the day; or

5C. Served in public or private separate schools, residential placements, or homebound or hospital placements.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 5A	Education Environment Rate -- Reg Class > 80% of day	*	*	*	*	*	*	*
Indicator 5B	Education Environment Rate -- Reg Class < 40% of day	*	*	*	*	*	*	*
Indicator 5C	Education Environment Rate -- Sep Schls	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 1228 Shields Valley H S

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 1228 Shields Valley H S

INDICATOR #12 - Children Referred By Part C

Percent of children referred by Part C, prior to age 3, who are found eligible for Part B, and who have an IEP developed and implemented by their third birthday.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 12	Children referred by Part C	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI Compliance Monitoring

Indicator Data Note:

NA = Data not available as district was not monitored in the year in which data is being reported.

District performance for this indicator is only for districts monitored in the year in which data is being reported. The OPI reviews a sample of student records as part of its compliance monitoring activities to determine if children referred by a Part C Service Provider Agency have an IEP in place at the age of three. A review of student records is to identify noncompliance issues with respect to 34 CFR 300.111 Child Find or 34 CFR 300.124 Transition of children from the Part C program to preschool programs.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0745 Sidney Elem

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0745 Sidney Elem

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0745 Sidney Elem

INDICATOR #3 - Statewide Assessments

Participation and performance of children with disabilities on statewide assessments:

3A. Has District met the state's AYP objectives for progress for disability subgroup?

3B. Participation rate for children with IEPs in statewide assessments.

3C. Proficiency rate for children with IEPs against grade-level standards and alternate achievement standards.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 3A	Assessment -- Meeting AYP Objectives	NA	NA	NA	NA	NA	NA	Met
Indicator 3B	Assessment -- Participation Rates	120	126	1 (100%)	0.97042	1	0.98 (98%)	Met
Indicator 3C	Assessment -- Proficiency Rates	120	37	0.31 (31%)	0.18358	0.46913	0.295 (29.5%)	Met

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0745 Sidney Elem

INDICATOR #4 - Suspension and Expulsion Rates

Districts who have been identified as having a significant discrepancy in long-term suspension and expulsion rates.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 4A	Suspension and Expulsion Rates	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

OPI School Discipline Data Collection reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The assessment of a school district's performance based on long-term suspension and expulsion rates is done by comparing the suspension and expulsion rates for students with disabilities to the long-term suspension and expulsion rates for nondisabled students. Long-term suspension or expulsion is defined as a suspension or expulsion that results in removal of a student, out-of-school, for greater than 10 school days or a student with multiple short-term (10 school days or less) out-of-school suspensions or expulsions that sum to greater than 10 school days during the school year.

For each racial/ethnic group, a statistical test of the difference between proportions is conducted to determine if the size of difference between the school district's special education long-term suspension and expulsion rates and the long-term suspension and expulsion rates for regular education students in the school district is statistically significant. In our comparison of long-term suspension and expulsion rates, we have set a .05 level of significance. This means, we are 95 percent confident that the differences between the rates are real (significant) and not due to random factors. However, the precision and reliability of this method is dependent upon having a large enough sample size to be representative of the school district's population and so, we also employ a minimum sample size (minimum N) of 10.

If the difference between the long-term suspension and expulsion rates for students with disabilities and the rates for nondisabled students by race/ethnicity group is statistically significant for a specific school district, the school district is flagged for additional investigation to determine if a significant discrepancy is occurring in the rates of long-term suspensions and expulsions of students with disabilities in a school year. This includes validation of the school district's long-term suspension and expulsion data and a systematic review of complaints/mediation/due process information, compliance monitoring and program data.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0745 Sidney Elem

INDICATOR #5 - Education Environment Rates

Percent of children with IEPs, aged 6-21,

5A. Removed from the regular class less than 21% of the school day.

5B. Removed from regular class greater than 60% of the day; or

5C. Served in public or private separate schools, residential placements, or homebound or hospital placements.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 5A	Education Environment Rate -- Reg Class > 80% of day	94	37	0.39 (39%)	0.25344	0.55379	0.5 (50%)	Met
Indicator 5B	Education Environment Rate -- Reg Class < 40% of day	94	8	0.09 (9%)	0.01139	0.42793	0.12 (12%)	Met
Indicator 5C	Education Environment Rate -- Sep Schls	94	0	0 (0%)	0	0	0.018 (1.8%)	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0745 Sidney Elem

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	25	2	0.08 (8%)	0.00301	0.70931	0.548 (54.8%)	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0745 Sidney Elem

INDICATOR #12 - Children Referred By Part C

Percent of children referred by Part C, prior to age 3, who are found eligible for Part B, and who have an IEP developed and implemented by their third birthday.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 12	Children referred by Part C	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI Compliance Monitoring

Indicator Data Note:

NA = Data not available as district was not monitored in the year in which data is being reported.

District performance for this indicator is only for districts monitored in the year in which data is being reported. The OPI reviews a sample of student records as part of its compliance monitoring activities to determine if children referred by a Part C Service Provider Agency have an IEP in place at the age of three. A review of student records is to identify noncompliance issues with respect to 34 CFR 300.111 Child Find or 34 CFR 300.124 Transition of children from the Part C program to preschool programs.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0746 Sidney H S

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

0746 Sidney H S

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	39	5	0.13 (13%)	0.01645	0.56295	0.058 (5.8%)	Met

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0746 Sidney H S

INDICATOR #3 - Statewide Assessments

Participation and performance of children with disabilities on statewide assessments:

3A. Has District met the state's AYP objectives for progress for disability subgroup?

3B. Participation rate for children with IEPs in statewide assessments.

3C. Proficiency rate for children with IEPs against grade-level standards and alternate achievement standards.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 3A	Assessment -- Meeting AYP Objectives	*	*	*	*	*	*	*
Indicator 3B	Assessment -- Participation Rates	22	22	1 (100%)	0.85138	1.00002	0.98 (98%)	Met
Indicator 3C	Assessment -- Proficiency Rates	*	*	*	*	*	*	*

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

0746 Sidney H S

INDICATOR #4 - Suspension and Expulsion Rates

Districts who have been identified as having a significant discrepancy in long-term suspension and expulsion rates.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 4A	Suspension and Expulsion Rates	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

OPI School Discipline Data Collection reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The assessment of a school district's performance based on long-term suspension and expulsion rates is done by comparing the suspension and expulsion rates for students with disabilities to the long-term suspension and expulsion rates for nondisabled students. Long-term suspension or expulsion is defined as a suspension or expulsion that results in removal of a student, out-of-school, for greater than 10 school days or a student with multiple short-term (10 school days or less) out-of-school suspensions or expulsions that sum to greater than 10 school days during the school year.

For each racial/ethnic group, a statistical test of the difference between proportions is conducted to determine if the size of difference between the school district's special education long-term suspension and expulsion rates and the long-term suspension and expulsion rates for regular education students in the school district is statistically significant. In our comparison of long-term suspension and expulsion rates, we have set a .05 level of significance. This means, we are 95 percent confident that the differences between the rates are real (significant) and not due to random factors. However, the precision and reliability of this method is dependent upon having a large enough sample size to be representative of the school district's population and so, we also employ a minimum sample size (minimum N) of 10.

If the difference between the long-term suspension and expulsion rates for students with disabilities and the rates for nondisabled students by race/ethnicity group is statistically significant for a specific school district, the school district is flagged for additional investigation to determine if a significant discrepancy is occurring in the rates of long-term suspensions and expulsions of students with disabilities in a school year. This includes validation of the school district's long-term suspension and expulsion data and a systematic review of complaints/mediation/due process information, compliance monitoring and program data.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0746 Sidney H S

INDICATOR #5 - Education Environment Rates

Percent of children with IEPs, aged 6-21,

5A. Removed from the regular class less than 21% of the school day.

5B. Removed from regular class greater than 60% of the day; or

5C. Served in public or private separate schools, residential placements, or homebound or hospital placements.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 5A	Education Environment Rate -- Reg Class > 80% of day	39	17	0.44 (44%)	0.23448	0.66093	0.5 (50%)	Met
Indicator 5B	Education Environment Rate -- Reg Class < 40% of day	39	4	0.1 (10%)	0.0091	0.58534	0.12 (12%)	Met
Indicator 5C	Education Environment Rate -- Sep Schls	39	0	0 (0%)	0	0	0.018 (1.8%)	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0746 Sidney H S

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0746 Sidney H S

INDICATOR #12 - Children Referred By Part C

Percent of children referred by Part C, prior to age 3, who are found eligible for Part B, and who have an IEP developed and implemented by their third birthday.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 12	Children referred by Part C	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI Compliance Monitoring

Indicator Data Note:

NA = Data not available as district was not monitored in the year in which data is being reported.

District performance for this indicator is only for districts monitored in the year in which data is being reported. The OPI reviews a sample of student records as part of its compliance monitoring activities to determine if children referred by a Part C Service Provider Agency have an IEP in place at the age of three. A review of student records is to identify noncompliance issues with respect to 34 CFR 300.111 Child Find or 34 CFR 300.124 Transition of children from the Part C program to preschool programs.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0118 Simms H S

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0118 Simms H S

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	15	1	0.07 (7%)	0.00103	0.8199	0.058 (5.8%)	Met

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0118 Simms H S

INDICATOR #3 - Statewide Assessments

Participation and performance of children with disabilities on statewide assessments:

3A. Has District met the state's AYP objectives for progress for disability subgroup?

3B. Participation rate for children with IEPs in statewide assessments.

3C. Proficiency rate for children with IEPs against grade-level standards and alternate achievement standards.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 3A	Assessment -- Meeting AYP Objectives	*	*	*	*	*	*	*
Indicator 3B	Assessment -- Participation Rates	*	*	*	*	*	*	*
Indicator 3C	Assessment -- Proficiency Rates	*	*	*	*	*	*	*

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

0118 Simms H S

INDICATOR #4 - Suspension and Expulsion Rates

Districts who have been identified as having a significant discrepancy in long-term suspension and expulsion rates.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 4A	Suspension and Expulsion Rates	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

OPI School Discipline Data Collection reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The assessment of a school district's performance based on long-term suspension and expulsion rates is done by comparing the suspension and expulsion rates for students with disabilities to the long-term suspension and expulsion rates for nondisabled students. Long-term suspension or expulsion is defined as a suspension or expulsion that results in removal of a student, out-of-school, for greater than 10 school days or a student with multiple short-term (10 school days or less) out-of-school suspensions or expulsions that sum to greater than 10 school days during the school year.

For each racial/ethnic group, a statistical test of the difference between proportions is conducted to determine if the size of difference between the school district's special education long-term suspension and expulsion rates and the long-term suspension and expulsion rates for regular education students in the school district is statistically significant. In our comparison of long-term suspension and expulsion rates, we have set a .05 level of significance. This means, we are 95 percent confident that the differences between the rates are real (significant) and not due to random factors. However, the precision and reliability of this method is dependent upon having a large enough sample size to be representative of the school district's population and so, we also employ a minimum sample size (minimum N) of 10.

If the difference between the long-term suspension and expulsion rates for students with disabilities and the rates for nondisabled students by race/ethnicity group is statistically significant for a specific school district, the school district is flagged for additional investigation to determine if a significant discrepancy is occurring in the rates of long-term suspensions and expulsions of students with disabilities in a school year. This includes validation of the school district's long-term suspension and expulsion data and a systematic review of complaints/mediation/due process information, compliance monitoring and program data.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

0118 Simms H S

INDICATOR #5 - Education Environment Rates

Percent of children with IEPs, aged 6-21,

5A. Removed from the regular class less than 21% of the school day.

5B. Removed from regular class greater than 60% of the day; or

5C. Served in public or private separate schools, residential placements, or homebound or hospital placements.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 5A	Education Environment Rate -- Reg Class > 80% of day	15	8	0.53 (53%)	0.23814	0.8069	0.5 (50%)	Met
Indicator 5B	Education Environment Rate -- Reg Class < 40% of day	15	0	0 (0%)	0	0	0.12 (12%)	Met
Indicator 5C	Education Environment Rate -- Sep Schls	15	0	0 (0%)	0	0	0.018 (1.8%)	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

0118 Simms H S

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0118 Simms H S

INDICATOR #12 - Children Referred By Part C

Percent of children referred by Part C, prior to age 3, who are found eligible for Part B, and who have an IEP developed and implemented by their third birthday.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 12	Children referred by Part C	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI Compliance Monitoring

Indicator Data Note:

NA = Data not available as district was not monitored in the year in which data is being reported.

District performance for this indicator is only for districts monitored in the year in which data is being reported. The OPI reviews a sample of student records as part of its compliance monitoring activities to determine if children referred by a Part C Service Provider Agency have an IEP in place at the age of three. A review of student records is to identify noncompliance issues with respect to 34 CFR 300.111 Child Find or 34 CFR 300.124 Transition of children from the Part C program to preschool programs.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0324 Smith Valley Elem

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0324 Smith Valley Elem

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0324 Smith Valley Elem

INDICATOR #3 - Statewide Assessments

Participation and performance of children with disabilities on statewide assessments:

3A. Has District met the state's AYP objectives for progress for disability subgroup?

3B. Participation rate for children with IEPs in statewide assessments.

3C. Proficiency rate for children with IEPs against grade-level standards and alternate achievement standards.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 3A	Assessment -- Meeting AYP Objectives	*	*	*	*	*	*	*
Indicator 3B	Assessment -- Participation Rates	24	24	1 (100%)	0.86205	1.00001	0.98 (98%)	Met
Indicator 3C	Assessment -- Proficiency Rates	*	*	*	*	*	*	*

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0324 Smith Valley Elem

INDICATOR #4 - Suspension and Expulsion Rates

Districts who have been identified as having a significant discrepancy in long-term suspension and expulsion rates.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 4A	Suspension and Expulsion Rates	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

OPI School Discipline Data Collection reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The assessment of a school district's performance based on long-term suspension and expulsion rates is done by comparing the suspension and expulsion rates for students with disabilities to the long-term suspension and expulsion rates for nondisabled students. Long-term suspension or expulsion is defined as a suspension or expulsion that results in removal of a student, out-of-school, for greater than 10 school days or a student with multiple short-term (10 school days or less) out-of-school suspensions or expulsions that sum to greater than 10 school days during the school year.

For each racial/ethnic group, a statistical test of the difference between proportions is conducted to determine if the size of difference between the school district's special education long-term suspension and expulsion rates and the long-term suspension and expulsion rates for regular education students in the school district is statistically significant. In our comparison of long-term suspension and expulsion rates, we have set a .05 level of significance. This means, we are 95 percent confident that the differences between the rates are real (significant) and not due to random factors. However, the precision and reliability of this method is dependent upon having a large enough sample size to be representative of the school district's population and so, we also employ a minimum sample size (minimum N) of 10.

If the difference between the long-term suspension and expulsion rates for students with disabilities and the rates for nondisabled students by race/ethnicity group is statistically significant for a specific school district, the school district is flagged for additional investigation to determine if a significant discrepancy is occurring in the rates of long-term suspensions and expulsions of students with disabilities in a school year. This includes validation of the school district's long-term suspension and expulsion data and a systematic review of complaints/mediation/due process information, compliance monitoring and program data.

District Name 0324 Smith Valley Elem

INDICATOR #5 - Education Environment Rates

Percent of children with IEPs, aged 6-21,

5A. Removed from the regular class less than 21% of the school day.

5B. Removed from regular class greater than 60% of the day; or

5C. Served in public or private separate schools, residential placements, or homebound or hospital placements.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 5A	Education Environment Rate -- Reg Class > 80% of day	17	13	0.76 (76%)	0.49294	0.91574	0.5 (50%)	Met
Indicator 5B	Education Environment Rate -- Reg Class < 40% of day	17	0	0 (0%)	0	0	0.12 (12%)	Met
Indicator 5C	Education Environment Rate -- Sep Schls	17	0	0 (0%)	0	0	0.018 (1.8%)	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0324 Smith Valley Elem

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

Linda McCulloch, Superintendent

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0324 Smith Valley Elem

INDICATOR #12 - Children Referred By Part C

Percent of children referred by Part C, prior to age 3, who are found eligible for Part B, and who have an IEP developed and implemented by their third birthday.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 12	Children referred by Part C	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI Compliance Monitoring

Indicator Data Note:

NA = Data not available as district was not monitored in the year in which data is being reported.

District performance for this indicator is only for districts monitored in the year in which data is being reported. The OPI reviews a sample of student records as part of its compliance monitoring activities to determine if children referred by a Part C Service Provider Agency have an IEP in place at the age of three. A review of student records is to identify noncompliance issues with respect to 34 CFR 300.111 Child Find or 34 CFR 300.124 Transition of children from the Part C program to preschool programs.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0327 Somers Elem

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0327 Somers Elem

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0327 Somers Elem

INDICATOR #3 - Statewide Assessments

Participation and performance of children with disabilities on statewide assessments:

3A. Has District met the state's AYP objectives for progress for disability subgroup?

3B. Participation rate for children with IEPs in statewide assessments.

3C. Proficiency rate for children with IEPs against grade-level standards and alternate achievement standards.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 3A	Assessment -- Meeting AYP Objectives	*	*	*	*	*	*	*
Indicator 3B	Assessment -- Participation Rates	36	36	1 (100%)	0.9036	1.00001	0.98 (98%)	Met
Indicator 3C	Assessment -- Proficiency Rates	36	10	0.28 (28%)	0.09553	0.58334	0.295 (29.5%)	Met

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0327 Somers Elem

INDICATOR #4 - Suspension and Expulsion Rates

Districts who have been identified as having a significant discrepancy in long-term suspension and expulsion rates.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 4A	Suspension and Expulsion Rates	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

OPI School Discipline Data Collection reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The assessment of a school district's performance based on long-term suspension and expulsion rates is done by comparing the suspension and expulsion rates for students with disabilities to the long-term suspension and expulsion rates for nondisabled students. Long-term suspension or expulsion is defined as a suspension or expulsion that results in removal of a student, out-of-school, for greater than 10 school days or a student with multiple short-term (10 school days or less) out-of-school suspensions or expulsions that sum to greater than 10 school days during the school year.

For each racial/ethnic group, a statistical test of the difference between proportions is conducted to determine if the size of difference between the school district's special education long-term suspension and expulsion rates and the long-term suspension and expulsion rates for regular education students in the school district is statistically significant. In our comparison of long-term suspension and expulsion rates, we have set a .05 level of significance. This means, we are 95 percent confident that the differences between the rates are real (significant) and not due to random factors. However, the precision and reliability of this method is dependent upon having a large enough sample size to be representative of the school district's population and so, we also employ a minimum sample size (minimum N) of 10.

If the difference between the long-term suspension and expulsion rates for students with disabilities and the rates for nondisabled students by race/ethnicity group is statistically significant for a specific school district, the school district is flagged for additional investigation to determine if a significant discrepancy is occurring in the rates of long-term suspensions and expulsions of students with disabilities in a school year. This includes validation of the school district's long-term suspension and expulsion data and a systematic review of complaints/mediation/due process information, compliance monitoring and program data.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

0327 Somers Elem

INDICATOR #5 - Education Environment Rates

Percent of children with IEPs, aged 6-21,

5A. Removed from the regular class less than 21% of the school day.

5B. Removed from regular class greater than 60% of the day; or

5C. Served in public or private separate schools, residential placements, or homebound or hospital placements.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 5A	Education Environment Rate -- Reg Class > 80% of day	28	17	0.61 (61%)	0.37678	0.79801	0.5 (50%)	Met
Indicator 5B	Education Environment Rate -- Reg Class < 40% of day	28	0	0 (0%)	0	0	0.12 (12%)	Met
Indicator 5C	Education Environment Rate -- Sep Schls	28	0	0 (0%)	0	0	0.018 (1.8%)	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0327 Somers Elem

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0327 Somers Elem

INDICATOR #12 - Children Referred By Part C

Percent of children referred by Part C, prior to age 3, who are found eligible for Part B, and who have an IEP developed and implemented by their third birthday.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 12	Children referred by Part C	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI Compliance Monitoring

Indicator Data Note:

NA = Data not available as district was not monitored in the year in which data is being reported.

District performance for this indicator is only for districts monitored in the year in which data is being reported. The OPI reviews a sample of student records as part of its compliance monitoring activities to determine if children referred by a Part C Service Provider Agency have an IEP in place at the age of three. A review of student records is to identify noncompliance issues with respect to 34 CFR 300.111 Child Find or 34 CFR 300.124 Transition of children from the Part C program to preschool programs.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0709 South Stacey Elem

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

0709 South Stacey Elem

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0709 South Stacey Elem

INDICATOR #3 - Statewide Assessments

Participation and performance of children with disabilities on statewide assessments:

3A. Has District met the state's AYP objectives for progress for disability subgroup?

3B. Participation rate for children with IEPs in statewide assessments.

3C. Proficiency rate for children with IEPs against grade-level standards and alternate achievement standards.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 3A	Assessment -- Meeting AYP Objectives	*	*	*	*	*	*	*
Indicator 3B	Assessment -- Participation Rates	*	*	*	*	*	*	*
Indicator 3C	Assessment -- Proficiency Rates	*	*	*	*	*	*	*

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0709 South Stacey Elem

INDICATOR #4 - Suspension and Expulsion Rates

Districts who have been identified as having a significant discrepancy in long-term suspension and expulsion rates.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 4A	Suspension and Expulsion Rates	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

OPI School Discipline Data Collection reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The assessment of a school district's performance based on long-term suspension and expulsion rates is done by comparing the suspension and expulsion rates for students with disabilities to the long-term suspension and expulsion rates for nondisabled students. Long-term suspension or expulsion is defined as a suspension or expulsion that results in removal of a student, out-of-school, for greater than 10 school days or a student with multiple short-term (10 school days or less) out-of-school suspensions or expulsions that sum to greater than 10 school days during the school year.

For each racial/ethnic group, a statistical test of the difference between proportions is conducted to determine if the size of difference between the school district's special education long-term suspension and expulsion rates and the long-term suspension and expulsion rates for regular education students in the school district is statistically significant. In our comparison of long-term suspension and expulsion rates, we have set a .05 level of significance. This means, we are 95 percent confident that the differences between the rates are real (significant) and not due to random factors. However, the precision and reliability of this method is dependent upon having a large enough sample size to be representative of the school district's population and so, we also employ a minimum sample size (minimum N) of 10.

If the difference between the long-term suspension and expulsion rates for students with disabilities and the rates for nondisabled students by race/ethnicity group is statistically significant for a specific school district, the school district is flagged for additional investigation to determine if a significant discrepancy is occurring in the rates of long-term suspensions and expulsions of students with disabilities in a school year. This includes validation of the school district's long-term suspension and expulsion data and a systematic review of complaints/mediation/due process information, compliance monitoring and program data.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

0709 South Stacey Elem

INDICATOR #5 - Education Environment Rates

Percent of children with IEPs, aged 6-21,

5A. Removed from the regular class less than 21% of the school day.

5B. Removed from regular class greater than 60% of the day; or

5C. Served in public or private separate schools, residential placements, or homebound or hospital placements.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 5A	Education Environment Rate -- Reg Class > 80% of day	*	*	*	*	*	*	*
Indicator 5B	Education Environment Rate -- Reg Class < 40% of day	*	*	*	*	*	*	*
Indicator 5C	Education Environment Rate -- Sep Schls	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0709 South Stacey Elem

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0709 South Stacey Elem

INDICATOR #12 - Children Referred By Part C

Percent of children referred by Part C, prior to age 3, who are found eligible for Part B, and who have an IEP developed and implemented by their third birthday.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 12	Children referred by Part C	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI Compliance Monitoring

Indicator Data Note:

NA = Data not available as district was not monitored in the year in which data is being reported.

District performance for this indicator is only for districts monitored in the year in which data is being reported. The OPI reviews a sample of student records as part of its compliance monitoring activities to determine if children referred by a Part C Service Provider Agency have an IEP in place at the age of three. A review of student records is to identify noncompliance issues with respect to 34 CFR 300.111 Child Find or 34 CFR 300.124 Transition of children from the Part C program to preschool programs.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0288 Spring Creek Colony Elem

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0288 Spring Creek Colony Elem

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

INDICATOR #3 - Statewide Assessments

Participation and performance of children with disabilities on statewide assessments:

3A. Has District met the state's AYP objectives for progress for disability subgroup?

3B. Participation rate for children with IEPs in statewide assessments.

3C. Proficiency rate for children with IEPs against grade-level standards and alternate achievement standards.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 3A	Assessment -- Meeting AYP Objectives	*	*	*	*	*	*	*
Indicator 3B	Assessment -- Participation Rates	*	*	*	*	*	*	*
Indicator 3C	Assessment -- Proficiency Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

INDICATOR #5 - Education Environment Rates

Percent of children with IEPs, aged 6-21,

5A. Removed from the regular class less than 21% of the school day.

5B. Removed from regular class greater than 60% of the day; or

5C. Served in public or private separate schools, residential placements, or homebound or hospital placements.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 5A	Education Environment Rate -- Reg Class > 80% of day	*	*	*	*	*	*	*
Indicator 5B	Education Environment Rate -- Reg Class < 40% of day	*	*	*	*	*	*	*
Indicator 5C	Education Environment Rate -- Sep Schls	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0288 Spring Creek Colony Elem

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0288 Spring Creek Colony Elem

INDICATOR #12 - Children Referred By Part C

Percent of children referred by Part C, prior to age 3, who are found eligible for Part B, and who have an IEP developed and implemented by their third birthday.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 12	Children referred by Part C	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI Compliance Monitoring

Indicator Data Note:

NA = Data not available as district was not monitored in the year in which data is being reported.

District performance for this indicator is only for districts monitored in the year in which data is being reported. The OPI reviews a sample of student records as part of its compliance monitoring activities to determine if children referred by a Part C Service Provider Agency have an IEP in place at the age of three. A review of student records is to identify noncompliance issues with respect to 34 CFR 300.111 Child Find or 34 CFR 300.124 Transition of children from the Part C program to preschool programs.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0020 Spring Creek Elem

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0020 Spring Creek Elem

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0020 Spring Creek Elem

INDICATOR #3 - Statewide Assessments

Participation and performance of children with disabilities on statewide assessments:

3A. Has District met the state's AYP objectives for progress for disability subgroup?

3B. Participation rate for children with IEPs in statewide assessments.

3C. Proficiency rate for children with IEPs against grade-level standards and alternate achievement standards.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 3A	Assessment -- Meeting AYP Objectives	NA	NA	NA	NA	NA	NA	NA
Indicator 3B	Assessment -- Participation Rates	NA	NA	NA	NA	NA	NA	NA
Indicator 3C	Assessment -- Proficiency Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0020 Spring Creek Elem

INDICATOR #4 - Suspension and Expulsion Rates

Districts who have been identified as having a significant discrepancy in long-term suspension and expulsion rates.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 4A	Suspension and Expulsion Rates	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

OPI School Discipline Data Collection reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The assessment of a school district's performance based on long-term suspension and expulsion rates is done by comparing the suspension and expulsion rates for students with disabilities to the long-term suspension and expulsion rates for nondisabled students. Long-term suspension or expulsion is defined as a suspension or expulsion that results in removal of a student, out-of-school, for greater than 10 school days or a student with multiple short-term (10 school days or less) out-of-school suspensions or expulsions that sum to greater than 10 school days during the school year.

For each racial/ethnic group, a statistical test of the difference between proportions is conducted to determine if the size of difference between the school district's special education long-term suspension and expulsion rates and the long-term suspension and expulsion rates for regular education students in the school district is statistically significant. In our comparison of long-term suspension and expulsion rates, we have set a .05 level of significance. This means, we are 95 percent confident that the differences between the rates are real (significant) and not due to random factors. However, the precision and reliability of this method is dependent upon having a large enough sample size to be representative of the school district's population and so, we also employ a minimum sample size (minimum N) of 10.

If the difference between the long-term suspension and expulsion rates for students with disabilities and the rates for nondisabled students by race/ethnicity group is statistically significant for a specific school district, the school district is flagged for additional investigation to determine if a significant discrepancy is occurring in the rates of long-term suspensions and expulsions of students with disabilities in a school year. This includes validation of the school district's long-term suspension and expulsion data and a systematic review of complaints/mediation/due process information, compliance monitoring and program data.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

0020 Spring Creek Elem

INDICATOR #5 - Education Environment Rates

Percent of children with IEPs, aged 6-21,

5A. Removed from the regular class less than 21% of the school day.

5B. Removed from regular class greater than 60% of the day; or

5C. Served in public or private separate schools, residential placements, or homebound or hospital placements.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 5A	Education Environment Rate -- Reg Class > 80% of day	*	*	*	*	*	*	*
Indicator 5B	Education Environment Rate -- Reg Class < 40% of day	*	*	*	*	*	*	*
Indicator 5C	Education Environment Rate -- Sep Schls	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0020 Spring Creek Elem

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

Indicator Data Source:

OPI Compliance Monitoring

Indicator Data Note:

NA = Data not available as district was not monitored in the year in which data is being reported.

District performance for this indicator is only for districts monitored in the year in which data is being reported. The OPI reviews a sample of student records as part of its compliance monitoring activities to determine if children referred by a Part C Service Provider Agency have an IEP in place at the age of three. A review of student records is to identify noncompliance issues with respect to 34 CFR 300.111 Child Find or 34 CFR 300.124 Transition of children from the Part C program to preschool programs.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0179 Spring Creek Elem

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0179 Spring Creek Elem

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

0179 Spring Creek Elem

INDICATOR #3 - Statewide Assessments

Participation and performance of children with disabilities on statewide assessments:

3A. Has District met the state's AYP objectives for progress for disability subgroup?

3B. Participation rate for children with IEPs in statewide assessments.

3C. Proficiency rate for children with IEPs against grade-level standards and alternate achievement standards.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 3A	Assessment -- Meeting AYP Objectives	NA	NA	NA	NA	NA	NA	NA
Indicator 3B	Assessment -- Participation Rates	NA	NA	NA	NA	NA	NA	NA
Indicator 3C	Assessment -- Proficiency Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0179 Spring Creek Elem

INDICATOR #4 - Suspension and Expulsion Rates

Districts who have been identified as having a significant discrepancy in long-term suspension and expulsion rates.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 4A	Suspension and Expulsion Rates	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

OPI School Discipline Data Collection reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The assessment of a school district's performance based on long-term suspension and expulsion rates is done by comparing the suspension and expulsion rates for students with disabilities to the long-term suspension and expulsion rates for nondisabled students. Long-term suspension or expulsion is defined as a suspension or expulsion that results in removal of a student, out-of-school, for greater than 10 school days or a student with multiple short-term (10 school days or less) out-of-school suspensions or expulsions that sum to greater than 10 school days during the school year.

For each racial/ethnic group, a statistical test of the difference between proportions is conducted to determine if the size of difference between the school district's special education long-term suspension and expulsion rates and the long-term suspension and expulsion rates for regular education students in the school district is statistically significant. In our comparison of long-term suspension and expulsion rates, we have set a .05 level of significance. This means, we are 95 percent confident that the differences between the rates are real (significant) and not due to random factors. However, the precision and reliability of this method is dependent upon having a large enough sample size to be representative of the school district's population and so, we also employ a minimum sample size (minimum N) of 10.

If the difference between the long-term suspension and expulsion rates for students with disabilities and the rates for nondisabled students by race/ethnicity group is statistically significant for a specific school district, the school district is flagged for additional investigation to determine if a significant discrepancy is occurring in the rates of long-term suspensions and expulsions of students with disabilities in a school year. This includes validation of the school district's long-term suspension and expulsion data and a systematic review of complaints/mediation/due process information, compliance monitoring and program data.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0179 Spring Creek Elem

INDICATOR #5 - Education Environment Rates

Percent of children with IEPs, aged 6-21,

5A. Removed from the regular class less than 21% of the school day.

5B. Removed from regular class greater than 60% of the day; or

5C. Served in public or private separate schools, residential placements, or homebound or hospital placements.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 5A	Education Environment Rate -- Reg Class > 80% of day	*	*	*	*	*	*	*
Indicator 5B	Education Environment Rate -- Reg Class < 40% of day	*	*	*	*	*	*	*
Indicator 5C	Education Environment Rate -- Sep Schls	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0179 Spring Creek Elem

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0179 Spring Creek Elem

INDICATOR #12 - Children Referred By Part C

Percent of children referred by Part C, prior to age 3, who are found eligible for Part B, and who have an IEP developed and implemented by their third birthday.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 12	Children referred by Part C	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI Compliance Monitoring

Indicator Data Note:

NA = Data not available as district was not monitored in the year in which data is being reported.

District performance for this indicator is only for districts monitored in the year in which data is being reported. The OPI reviews a sample of student records as part of its compliance monitoring activities to determine if children referred by a Part C Service Provider Agency have an IEP in place at the age of three. A review of student records is to identify noncompliance issues with respect to 34 CFR 300.111 Child Find or 34 CFR 300.124 Transition of children from the Part C program to preschool programs.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0635 Springdale Elem

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0635 Springdale Elem

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

Indicator 3C	Assessment -- Proficiency Rates	*	*	*	*	*	*	*

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

Indicator 5A	Education Environment Rate -- Reg Class > 80% of day	*	*	*	*	*	*	*
Indicator 5B	Education Environment Rate -- Reg Class < 40% of day	*	*	*	*	*	*	*
Indicator 5C	Education Environment Rate -- Sep Schls	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0635 Springdale Elem

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0635 Springdale Elem

INDICATOR #12 - Children Referred By Part C

Percent of children referred by Part C, prior to age 3, who are found eligible for Part B, and who have an IEP developed and implemented by their third birthday.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 12	Children referred by Part C	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI Compliance Monitoring

Indicator Data Note:

NA = Data not available as district was not monitored in the year in which data is being reported.

District performance for this indicator is only for districts monitored in the year in which data is being reported. The OPI reviews a sample of student records as part of its compliance monitoring activities to determine if children referred by a Part C Service Provider Agency have an IEP in place at the age of three. A review of student records is to identify noncompliance issues with respect to 34 CFR 300.111 Child Find or 34 CFR 300.124 Transition of children from the Part C program to preschool programs.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0357 Springhill Elem

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0357 Springhill Elem

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0357 Springhill Elem

INDICATOR #3 - Statewide Assessments

Participation and performance of children with disabilities on statewide assessments:

3A. Has District met the state's AYP objectives for progress for disability subgroup?

3B. Participation rate for children with IEPs in statewide assessments.

3C. Proficiency rate for children with IEPs against grade-level standards and alternate achievement standards.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 3A	Assessment -- Meeting AYP Objectives	NA	NA	NA	NA	NA	NA	NA
Indicator 3B	Assessment -- Participation Rates	NA	NA	NA	NA	NA	NA	NA
Indicator 3C	Assessment -- Proficiency Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0357 Springhill Elem

INDICATOR #4 - Suspension and Expulsion Rates

Districts who have been identified as having a significant discrepancy in long-term suspension and expulsion rates.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 4A	Suspension and Expulsion Rates	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

OPI School Discipline Data Collection reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The assessment of a school district's performance based on long-term suspension and expulsion rates is done by comparing the suspension and expulsion rates for students with disabilities to the long-term suspension and expulsion rates for nondisabled students. Long-term suspension or expulsion is defined as a suspension or expulsion that results in removal of a student, out-of-school, for greater than 10 school days or a student with multiple short-term (10 school days or less) out-of-school suspensions or expulsions that sum to greater than 10 school days during the school year.

For each racial/ethnic group, a statistical test of the difference between proportions is conducted to determine if the size of difference between the school district's special education long-term suspension and expulsion rates and the long-term suspension and expulsion rates for regular education students in the school district is statistically significant. In our comparison of long-term suspension and expulsion rates, we have set a .05 level of significance. This means, we are 95 percent confident that the differences between the rates are real (significant) and not due to random factors. However, the precision and reliability of this method is dependent upon having a large enough sample size to be representative of the school district's population and so, we also employ a minimum sample size (minimum N) of 10.

If the difference between the long-term suspension and expulsion rates for students with disabilities and the rates for nondisabled students by race/ethnicity group is statistically significant for a specific school district, the school district is flagged for additional investigation to determine if a significant discrepancy is occurring in the rates of long-term suspensions and expulsions of students with disabilities in a school year. This includes validation of the school district's long-term suspension and expulsion data and a systematic review of complaints/mediation/due process information, compliance monitoring and program data.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0357 Springhill Elem

INDICATOR #5 - Education Environment Rates

Percent of children with IEPs, aged 6-21,

5A. Removed from the regular class less than 21% of the school day.

5B. Removed from regular class greater than 60% of the day; or

5C. Served in public or private separate schools, residential placements, or homebound or hospital placements.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 5A	Education Environment Rate -- Reg Class > 80% of day	*	*	*	*	*	*	*
Indicator 5B	Education Environment Rate -- Reg Class < 40% of day	*	*	*	*	*	*	*
Indicator 5C	Education Environment Rate -- Sep Schls	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0357 Springhill Elem

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0357 Springhill Elem

INDICATOR #12 - Children Referred By Part C

Percent of children referred by Part C, prior to age 3, who are found eligible for Part B, and who have an IEP developed and implemented by their third birthday.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 12	Children referred by Part C	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI Compliance Monitoring

Indicator Data Note:

NA = Data not available as district was not monitored in the year in which data is being reported.

District performance for this indicator is only for districts monitored in the year in which data is being reported. The OPI reviews a sample of student records as part of its compliance monitoring activities to determine if children referred by a Part C Service Provider Agency have an IEP in place at the age of three. A review of student records is to identify noncompliance issues with respect to 34 CFR 300.111 Child Find or 34 CFR 300.124 Transition of children from the Part C program to preschool programs.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0481 St Ignatius K-12 Schools

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0481 St Ignatius K-12 Schools

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	30	3	0.1 (10%)	0.00676	0.64236	0.058 (5.8%)	Met

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0481 St Ignatius K-12 Schools

INDICATOR #3 - Statewide Assessments

Participation and performance of children with disabilities on statewide assessments:

3A. Has District met the state's AYP objectives for progress for disability subgroup?

3B. Participation rate for children with IEPs in statewide assessments.

3C. Proficiency rate for children with IEPs against grade-level standards and alternate achievement standards.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 3A	Assessment -- Meeting AYP Objectives			(%)			NA	Not Met
Indicator 3B	Assessment -- Participation Rates	86	88	1 (100%)	0.95818	1	0.98 (98%)	Met
Indicator 3C	Assessment -- Proficiency Rates	86	13	0.15 (15%)	0.04202	0.41939	0.295 (29.5%)	Met

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0481 St Ignatius K-12 Schools

INDICATOR #4 - Suspension and Expulsion Rates

Districts who have been identified as having a significant discrepancy in long-term suspension and expulsion rates.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 4A	Suspension and Expulsion Rates	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

OPI School Discipline Data Collection reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The assessment of a school district's performance based on long-term suspension and expulsion rates is done by comparing the suspension and expulsion rates for students with disabilities to the long-term suspension and expulsion rates for nondisabled students. Long-term suspension or expulsion is defined as a suspension or expulsion that results in removal of a student, out-of-school, for greater than 10 school days or a student with multiple short-term (10 school days or less) out-of-school suspensions or expulsions that sum to greater than 10 school days during the school year.

For each racial/ethnic group, a statistical test of the difference between proportions is conducted to determine if the size of difference between the school district's special education long-term suspension and expulsion rates and the long-term suspension and expulsion rates for regular education students in the school district is statistically significant. In our comparison of long-term suspension and expulsion rates, we have set a .05 level of significance. This means, we are 95 percent confident that the differences between the rates are real (significant) and not due to random factors. However, the precision and reliability of this method is dependent upon having a large enough sample size to be representative of the school district's population and so, we also employ a minimum sample size (minimum N) of 10.

If the difference between the long-term suspension and expulsion rates for students with disabilities and the rates for nondisabled students by race/ethnicity group is statistically significant for a specific school district, the school district is flagged for additional investigation to determine if a significant discrepancy is occurring in the rates of long-term suspensions and expulsions of students with disabilities in a school year. This includes validation of the school district's long-term suspension and expulsion data and a systematic review of complaints/mediation/due process information, compliance monitoring and program data.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0481 St Ignatius K-12 Schools

INDICATOR #5 - Education Environment Rates

Percent of children with IEPs, aged 6-21,

5A. Removed from the regular class less than 21% of the school day.

5B. Removed from regular class greater than 60% of the day; or

5C. Served in public or private separate schools, residential placements, or homebound or hospital placements.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 5A	Education Environment Rate -- Reg Class > 80% of day	74	41	0.55 (55%)	0.40385	0.69499	0.5 (50%)	Met
Indicator 5B	Education Environment Rate -- Reg Class < 40% of day	74	7	0.09 (9%)	0.0124	0.464	0.12 (12%)	Met
Indicator 5C	Education Environment Rate -- Sep Schls	74	0	0 (0%)	0	0	0.018 (1.8%)	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0481 St Ignatius K-12 Schools

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	15	14	0.93 (93%)	0.69139	0.98872	0.548 (54.8%)	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0481 St Ignatius K-12 Schools

INDICATOR #12 - Children Referred By Part C

Percent of children referred by Part C, prior to age 3, who are found eligible for Part B, and who have an IEP developed and implemented by their third birthday.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 12	Children referred by Part C	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI Compliance Monitoring

Indicator Data Note:

NA = Data not available as district was not monitored in the year in which data is being reported.

District performance for this indicator is only for districts monitored in the year in which data is being reported. The OPI reviews a sample of student records as part of its compliance monitoring activities to determine if children referred by a Part C Service Provider Agency have an IEP in place at the age of three. A review of student records is to identify noncompliance issues with respect to 34 CFR 300.111 Child Find or 34 CFR 300.124 Transition of children from the Part C program to preschool programs.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0582 St Regis K-12 Schools

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0582 St Regis K-12 Schools

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	10	0	0 (0%)	0	0	0.058 (5.8%)	Met

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

INDICATOR #3 - Statewide Assessments

Participation and performance of children with disabilities on statewide assessments:

3A. Has District met the state's AYP objectives for progress for disability subgroup?

3B. Participation rate for children with IEPs in statewide assessments.

3C. Proficiency rate for children with IEPs against grade-level standards and alternate achievement standards.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 3A	Assessment -- Meeting AYP Objectives	*	*	*	*	*	*	*
Indicator 3B	Assessment -- Participation Rates	20	14	0.7 (70%)	0.43998	0.87392	0.98 (98%)	Not Met
Indicator 3C	Assessment -- Proficiency Rates	*	*	*	*	*	*	*

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The assessment of a school district's performance based on long-term suspension and expulsion rates is done by comparing the suspension and expulsion rates for students with disabilities to the long-term suspension and expulsion rates for nondisabled students. Long-term suspension or expulsion is defined as a suspension or expulsion that results in removal of a student, out-of-school, for greater than 10 school days or a student with multiple short-term (10 school days or less) out-of-school suspensions or expulsions that sum to greater than 10 school days during the school year.

For each racial/ethnic group, a statistical test of the difference between proportions is conducted to determine if the size of difference between the school district's special education long-term suspension and expulsion rates and the long-term suspension and expulsion rates for regular education students in the school district is statistically significant. In our comparison of long-term suspension and expulsion rates, we have set a .05 level of significance. This means, we are 95 percent confident that the differences between the rates are real (significant) and not due to random factors. However, the precision and reliability of this method is dependent upon having a large enough sample size to be representative of the school district's population and so, we also employ a minimum sample size (minimum N) of 10.

If the difference between the long-term suspension and expulsion rates for students with disabilities and the rates for nondisabled students by race/ethnicity group is statistically significant for a specific school district, the school district is flagged for additional investigation to determine if a significant discrepancy is occurring in the rates of long-term suspensions and expulsions of students with disabilities in a school year. This includes validation of the school district's long-term suspension and expulsion data and a systematic review of complaints/mediation/due process information, compliance monitoring and program data.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0582 St Regis K-12 Schools

INDICATOR #5 - Education Environment Rates

Percent of children with IEPs, aged 6-21,

5A. Removed from the regular class less than 21% of the school day.

5B. Removed from regular class greater than 60% of the day; or

5C. Served in public or private separate schools, residential placements, or homebound or hospital placements.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 5A	Education Environment Rate -- Reg Class > 80% of day	22	12	0.55 (55%)	0.28897	0.77989	0.5 (50%)	Met
Indicator 5B	Education Environment Rate -- Reg Class < 40% of day	22	0	0 (0%)	0	0	0.12 (12%)	Met
Indicator 5C	Education Environment Rate -- Sep Schls	22	0	0 (0%)	0	0	0.018 (1.8%)	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0582 St Regis K-12 Schools

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0582 St Regis K-12 Schools

INDICATOR #12 - Children Referred By Part C

Percent of children referred by Part C, prior to age 3, who are found eligible for Part B, and who have an IEP developed and implemented by their third birthday.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 12	Children referred by Part C	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI Compliance Monitoring

Indicator Data Note:

NA = Data not available as district was not monitored in the year in which data is being reported.

District performance for this indicator is only for districts monitored in the year in which data is being reported. The OPI reviews a sample of student records as part of its compliance monitoring activities to determine if children referred by a Part C Service Provider Agency have an IEP in place at the age of three. A review of student records is to identify noncompliance issues with respect to 34 CFR 300.111 Child Find or 34 CFR 300.124 Transition of children from the Part C program to preschool programs.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0464 Stanford K-12 Schools

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0464 Stanford K-12 Schools

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0464 Stanford K-12 Schools

INDICATOR #3 - Statewide Assessments

Participation and performance of children with disabilities on statewide assessments:

3A. Has District met the state's AYP objectives for progress for disability subgroup?

3B. Participation rate for children with IEPs in statewide assessments.

3C. Proficiency rate for children with IEPs against grade-level standards and alternate achievement standards.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 3A	Assessment -- Meeting AYP Objectives	*	*	*	*	*	*	*
Indicator 3B	Assessment -- Participation Rates	16	14	0.88 (88%)	0.62087	0.96769	0.98 (98%)	Not Met
Indicator 3C	Assessment -- Proficiency Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0464 Stanford K-12 Schools

INDICATOR #4 - Suspension and Expulsion Rates

Districts who have been identified as having a significant discrepancy in long-term suspension and expulsion rates.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 4A	Suspension and Expulsion Rates	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

OPI School Discipline Data Collection reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The assessment of a school district's performance based on long-term suspension and expulsion rates is done by comparing the suspension and expulsion rates for students with disabilities to the long-term suspension and expulsion rates for nondisabled students. Long-term suspension or expulsion is defined as a suspension or expulsion that results in removal of a student, out-of-school, for greater than 10 school days or a student with multiple short-term (10 school days or less) out-of-school suspensions or expulsions that sum to greater than 10 school days during the school year.

For each racial/ethnic group, a statistical test of the difference between proportions is conducted to determine if the size of difference between the school district's special education long-term suspension and expulsion rates and the long-term suspension and expulsion rates for regular education students in the school district is statistically significant. In our comparison of long-term suspension and expulsion rates, we have set a .05 level of significance. This means, we are 95 percent confident that the differences between the rates are real (significant) and not due to random factors. However, the precision and reliability of this method is dependent upon having a large enough sample size to be representative of the school district's population and so, we also employ a minimum sample size (minimum N) of 10.

If the difference between the long-term suspension and expulsion rates for students with disabilities and the rates for nondisabled students by race/ethnicity group is statistically significant for a specific school district, the school district is flagged for additional investigation to determine if a significant discrepancy is occurring in the rates of long-term suspensions and expulsions of students with disabilities in a school year. This includes validation of the school district's long-term suspension and expulsion data and a systematic review of complaints/mediation/due process information, compliance monitoring and program data.

0464 Stanford K-12 Schools

INDICATOR #5 - Education Environment Rates

Percent of children with IEPs, aged 6-21,

5A. Removed from the regular class less than 21% of the school day.

5B. Removed from regular class greater than 60% of the day; or

5C. Served in public or private separate schools, residential placements, or homebound or hospital placements.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 5A	Education Environment Rate -- Reg Class > 80% of day	17	3	0.18 (18%)	0.01953	0.69666	0.5 (50%)	Met
Indicator 5B	Education Environment Rate -- Reg Class < 40% of day	17	0	0 (0%)	0	0	0.12 (12%)	Met
Indicator 5C	Education Environment Rate -- Sep Schls	17	0	0 (0%)	0	0	0.018 (1.8%)	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0464 Stanford K-12 Schools

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

Linda McCulloch, Superintendent
Montana Office of Public Instruction
PO Box 202501

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0464 Stanford K-12 Schools

INDICATOR #12 - Children Referred By Part C

Percent of children referred by Part C, prior to age 3, who are found eligible for Part B, and who have an IEP developed and implemented by their third birthday.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 12	Children referred by Part C	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI Compliance Monitoring

Indicator Data Note:

NA = Data not available as district was not monitored in the year in which data is being reported.

District performance for this indicator is only for districts monitored in the year in which data is being reported. The OPI reviews a sample of student records as part of its compliance monitoring activities to determine if children referred by a Part C Service Provider Agency have an IEP in place at the age of three. A review of student records is to identify noncompliance issues with respect to 34 CFR 300.111 Child Find or 34 CFR 300.124 Transition of children from the Part C program to preschool programs.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0732 Stevensville Elem

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0732 Stevensville Elem

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0732 Stevensville Elem

INDICATOR #3 - Statewide Assessments

Participation and performance of children with disabilities on statewide assessments:

3A. Has District met the state's AYP objectives for progress for disability subgroup?

3B. Participation rate for children with IEPs in statewide assessments.

3C. Proficiency rate for children with IEPs against grade-level standards and alternate achievement standards.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 3A	Assessment -- Meeting AYP Objectives	NA	NA	NA	NA	NA	NA	Met
Indicator 3B	Assessment -- Participation Rates	38	88	1 (100%)	0.95818	1	0.98 (98%)	Met
Indicator 3C	Assessment -- Proficiency Rates	38	22	0.58 (58%)	0.37648	0.75795	0.295 (29.5%)	Met

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0732 Stevensville Elem

INDICATOR #4 - Suspension and Expulsion Rates

Districts who have been identified as having a significant discrepancy in long-term suspension and expulsion rates.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 4A	Suspension and Expulsion Rates	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

OPI School Discipline Data Collection reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The assessment of a school district's performance based on long-term suspension and expulsion rates is done by comparing the suspension and expulsion rates for students with disabilities to the long-term suspension and expulsion rates for nondisabled students. Long-term suspension or expulsion is defined as a suspension or expulsion that results in removal of a student, out-of-school, for greater than 10 school days or a student with multiple short-term (10 school days or less) out-of-school suspensions or expulsions that sum to greater than 10 school days during the school year.

For each racial/ethnic group, a statistical test of the difference between proportions is conducted to determine if the size of difference between the school district's special education long-term suspension and expulsion rates and the long-term suspension and expulsion rates for regular education students in the school district is statistically significant. In our comparison of long-term suspension and expulsion rates, we have set a .05 level of significance. This means, we are 95 percent confident that the differences between the rates are real (significant) and not due to random factors. However, the precision and reliability of this method is dependent upon having a large enough sample size to be representative of the school district's population and so, we also employ a minimum sample size (minimum N) of 10.

If the difference between the long-term suspension and expulsion rates for students with disabilities and the rates for nondisabled students by race/ethnicity group is statistically significant for a specific school district, the school district is flagged for additional investigation to determine if a significant discrepancy is occurring in the rates of long-term suspensions and expulsions of students with disabilities in a school year. This includes validation of the school district's long-term suspension and expulsion data and a systematic review of complaints/mediation/due process information, compliance monitoring and program data.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0732 Stevensville Elem

INDICATOR #5 - Education Environment Rates

Percent of children with IEPs, aged 6-21,

5A. Removed from the regular class less than 21% of the school day.

5B. Removed from regular class greater than 60% of the day; or

5C. Served in public or private separate schools, residential placements, or homebound or hospital placements.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 5A	Education Environment Rate -- Reg Class > 80% of day	80	57	0.71 (71%)	0.58456	0.8136	0.5 (50%)	Met
Indicator 5B	Education Environment Rate -- Reg Class < 40% of day	80	4	0.05 (5%)	0.00231	0.5385	0.12 (12%)	Met
Indicator 5C	Education Environment Rate -- Sep Schls	80	0	0 (0%)	0	0	0.018 (1.8%)	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

0732 Stevensville Elem

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0732 Stevensville Elem

INDICATOR #12 - Children Referred By Part C

Percent of children referred by Part C, prior to age 3, who are found eligible for Part B, and who have an IEP developed and implemented by their third birthday.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 12	Children referred by Part C	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI Compliance Monitoring

Indicator Data Note:

NA = Data not available as district was not monitored in the year in which data is being reported.

District performance for this indicator is only for districts monitored in the year in which data is being reported. The OPI reviews a sample of student records as part of its compliance monitoring activities to determine if children referred by a Part C Service Provider Agency have an IEP in place at the age of three. A review of student records is to identify noncompliance issues with respect to 34 CFR 300.111 Child Find or 34 CFR 300.124 Transition of children from the Part C program to preschool programs.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0733 Stevensville H S

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	13	10	0.77 (77%)	0.46031	0.92874	0.699 (69.9%)	Met

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0733 Stevensville H S

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	47	2	0.04 (4%)	0.00083	0.68584	0.058 (5.8%)	Met

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0733 Stevensville H S

INDICATOR #3 - Statewide Assessments

Participation and performance of children with disabilities on statewide assessments:

3A. Has District met the state's AYP objectives for progress for disability subgroup?

3B. Participation rate for children with IEPs in statewide assessments.

3C. Proficiency rate for children with IEPs against grade-level standards and alternate achievement standards.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 3A	Assessment -- Meeting AYP Objectives	*	*	*	*	*	*	*
Indicator 3B	Assessment -- Participation Rates	38	33	0.87 (87%)	0.7143	0.94574	0.98 (98%)	Not Met
Indicator 3C	Assessment -- Proficiency Rates	*	*	*	*	*	*	*

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0733 Stevensville H S

INDICATOR #4 - Suspension and Expulsion Rates

Districts who have been identified as having a significant discrepancy in long-term suspension and expulsion rates.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 4A	Suspension and Expulsion Rates	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

OPI School Discipline Data Collection reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The assessment of a school district's performance based on long-term suspension and expulsion rates is done by comparing the suspension and expulsion rates for students with disabilities to the long-term suspension and expulsion rates for nondisabled students. Long-term suspension or expulsion is defined as a suspension or expulsion that results in removal of a student, out-of-school, for greater than 10 school days or a student with multiple short-term (10 school days or less) out-of-school suspensions or expulsions that sum to greater than 10 school days during the school year.

For each racial/ethnic group, a statistical test of the difference between proportions is conducted to determine if the size of difference between the school district's special education long-term suspension and expulsion rates and the long-term suspension and expulsion rates for regular education students in the school district is statistically significant. In our comparison of long-term suspension and expulsion rates, we have set a .05 level of significance. This means, we are 95 percent confident that the differences between the rates are real (significant) and not due to random factors. However, the precision and reliability of this method is dependent upon having a large enough sample size to be representative of the school district's population and so, we also employ a minimum sample size (minimum N) of 10.

If the difference between the long-term suspension and expulsion rates for students with disabilities and the rates for nondisabled students by race/ethnicity group is statistically significant for a specific school district, the school district is flagged for additional investigation to determine if a significant discrepancy is occurring in the rates of long-term suspensions and expulsions of students with disabilities in a school year. This includes validation of the school district's long-term suspension and expulsion data and a systematic review of complaints/mediation/due process information, compliance monitoring and program data.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0733 Stevensville H S

INDICATOR #5 - Education Environment Rates

Percent of children with IEPs, aged 6-21,

5A. Removed from the regular class less than 21% of the school day.

5B. Removed from regular class greater than 60% of the day; or

5C. Served in public or private separate schools, residential placements, or homebound or hospital placements.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 5A	Education Environment Rate -- Reg Class > 80% of day	47	38	0.81 (81%)	0.65765	0.90274	0.5 (50%)	Met
Indicator 5B	Education Environment Rate -- Reg Class < 40% of day	47	4	0.09 (9%)	0.00642	0.57021	0.12 (12%)	Met
Indicator 5C	Education Environment Rate -- Sep Schls	47	0	0 (0%)	0	0	0.018 (1.8%)	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0733 Stevensville H S

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0733 Stevensville H S

INDICATOR #12 - Children Referred By Part C

Percent of children referred by Part C, prior to age 3, who are found eligible for Part B, and who have an IEP developed and implemented by their third birthday.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 12	Children referred by Part C	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI Compliance Monitoring

Indicator Data Note:

NA = Data not available as district was not monitored in the year in which data is being reported.

District performance for this indicator is only for districts monitored in the year in which data is being reported. The OPI reviews a sample of student records as part of its compliance monitoring activities to determine if children referred by a Part C Service Provider Agency have an IEP in place at the age of three. A review of student records is to identify noncompliance issues with respect to 34 CFR 300.111 Child Find or 34 CFR 300.124 Transition of children from the Part C program to preschool programs.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 1225 Sun River Valley Elem

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 1225 Sun River Valley Elem

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

INDICATOR #3 - Statewide Assessments

Participation and performance of children with disabilities on statewide assessments:

3A. Has District met the state's AYP objectives for progress for disability subgroup?

3B. Participation rate for children with IEPs in statewide assessments.

3C. Proficiency rate for children with IEPs against grade-level standards and alternate achievement standards.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 3A	Assessment -- Meeting AYP Objectives	*	*	*	*	*	*	*
Indicator 3B	Assessment -- Participation Rates	28	42	1 (100%)	0.91622	1.00001	0.98 (98%)	Met
Indicator 3C	Assessment -- Proficiency Rates	28	18	0.64 (64%)	0.41522	0.82026	0.295 (29.5%)	Met

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 1225 Sun River Valley Elem

INDICATOR #4 - Suspension and Expulsion Rates

Districts who have been identified as having a significant discrepancy in long-term suspension and expulsion rates.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 4A	Suspension and Expulsion Rates	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

OPI School Discipline Data Collection reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The assessment of a school district's performance based on long-term suspension and expulsion rates is done by comparing the suspension and expulsion rates for students with disabilities to the long-term suspension and expulsion rates for nondisabled students. Long-term suspension or expulsion is defined as a suspension or expulsion that results in removal of a student, out-of-school, for greater than 10 school days or a student with multiple short-term (10 school days or less) out-of-school suspensions or expulsions that sum to greater than 10 school days during the school year.

For each racial/ethnic group, a statistical test of the difference between proportions is conducted to determine if the size of difference between the school district's special education long-term suspension and expulsion rates and the long-term suspension and expulsion rates for regular education students in the school district is statistically significant. In our comparison of long-term suspension and expulsion rates, we have set a .05 level of significance. This means, we are 95 percent confident that the differences between the rates are real (significant) and not due to random factors. However, the precision and reliability of this method is dependent upon having a large enough sample size to be representative of the school district's population and so, we also employ a minimum sample size (minimum N) of 10.

If the difference between the long-term suspension and expulsion rates for students with disabilities and the rates for nondisabled students by race/ethnicity group is statistically significant for a specific school district, the school district is flagged for additional investigation to determine if a significant discrepancy is occurring in the rates of long-term suspensions and expulsions of students with disabilities in a school year. This includes validation of the school district's long-term suspension and expulsion data and a systematic review of complaints/mediation/due process information, compliance monitoring and program data.

INDICATOR #5 - Education Environment Rates

Percent of children with IEPs, aged 6-21,

5A. Removed from the regular class less than 21% of the school day.

5B. Removed from regular class greater than 60% of the day; or

5C. Served in public or private separate schools, residential placements, or homebound or hospital placements.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 5A	Education Environment Rate -- Reg Class > 80% of day	28	11	0.39 (39%)	0.17055	0.6706	0.5 (50%)	Met
Indicator 5B	Education Environment Rate -- Reg Class < 40% of day	28	2	0.07 (7%)	0.0024	0.70404	0.12 (12%)	Met
Indicator 5C	Education Environment Rate -- Sep Schls	28	0	0 (0%)	0	0	0.018 (1.8%)	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 1225 Sun River Valley Elem

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 1225 Sun River Valley Elem

INDICATOR #12 - Children Referred By Part C

Percent of children referred by Part C, prior to age 3, who are found eligible for Part B, and who have an IEP developed and implemented by their third birthday.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 12	Children referred by Part C	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI Compliance Monitoring

Indicator Data Note:

NA = Data not available as district was not monitored in the year in which data is being reported.

District performance for this indicator is only for districts monitored in the year in which data is being reported. The OPI reviews a sample of student records as part of its compliance monitoring activities to determine if children referred by a Part C Service Provider Agency have an IEP in place at the age of three. A review of student records is to identify noncompliance issues with respect to 34 CFR 300.111 Child Find or 34 CFR 300.124 Transition of children from the Part C program to preschool programs.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0903 Sunburst K-12 Schools

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0903 Sunburst K-12 Schools

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	11	0	0 (0%)	0	0	0.058 (5.8%)	Met

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0903 Sunburst K-12 Schools

INDICATOR #3 - Statewide Assessments

Participation and performance of children with disabilities on statewide assessments:

3A. Has District met the state's AYP objectives for progress for disability subgroup?

3B. Participation rate for children with IEPs in statewide assessments.

3C. Proficiency rate for children with IEPs against grade-level standards and alternate achievement standards.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 3A	Assessment -- Meeting AYP Objectives	*	*	*	*	*	*	*
Indicator 3B	Assessment -- Participation Rates	26	26	1 (100%)	0.8713	1.00001	0.98 (98%)	Met
Indicator 3C	Assessment -- Proficiency Rates	*	*	*	*	*	*	*

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0903 Sunburst K-12 Schools

INDICATOR #4 - Suspension and Expulsion Rates

Districts who have been identified as having a significant discrepancy in long-term suspension and expulsion rates.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 4A	Suspension and Expulsion Rates	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

OPI School Discipline Data Collection reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The assessment of a school district's performance based on long-term suspension and expulsion rates is done by comparing the suspension and expulsion rates for students with disabilities to the long-term suspension and expulsion rates for nondisabled students. Long-term suspension or expulsion is defined as a suspension or expulsion that results in removal of a student, out-of-school, for greater than 10 school days or a student with multiple short-term (10 school days or less) out-of-school suspensions or expulsions that sum to greater than 10 school days during the school year.

For each racial/ethnic group, a statistical test of the difference between proportions is conducted to determine if the size of difference between the school district's special education long-term suspension and expulsion rates and the long-term suspension and expulsion rates for regular education students in the school district is statistically significant. In our comparison of long-term suspension and expulsion rates, we have set a .05 level of significance. This means, we are 95 percent confident that the differences between the rates are real (significant) and not due to random factors. However, the precision and reliability of this method is dependent upon having a large enough sample size to be representative of the school district's population and so, we also employ a minimum sample size (minimum N) of 10.

If the difference between the long-term suspension and expulsion rates for students with disabilities and the rates for nondisabled students by race/ethnicity group is statistically significant for a specific school district, the school district is flagged for additional investigation to determine if a significant discrepancy is occurring in the rates of long-term suspensions and expulsions of students with disabilities in a school year. This includes validation of the school district's long-term suspension and expulsion data and a systematic review of complaints/mediation/due process information, compliance monitoring and program data.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0903 Sunburst K-12 Schools

INDICATOR #5 - Education Environment Rates

Percent of children with IEPs, aged 6-21,

5A. Removed from the regular class less than 21% of the school day.

5B. Removed from regular class greater than 60% of the day; or

5C. Served in public or private separate schools, residential placements, or homebound or hospital placements.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 5A	Education Environment Rate -- Reg Class > 80% of day	22	8	0.36 (36%)	0.1303	0.68542	0.5 (50%)	Met
Indicator 5B	Education Environment Rate -- Reg Class < 40% of day	22	1	0.05 (5%)	0.00044	0.81172	0.12 (12%)	Met
Indicator 5C	Education Environment Rate -- Sep Schls	22	1	0.05 (5%)	0.00044	0.81172	0.018 (1.8%)	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0903 Sunburst K-12 Schools

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0903 Sunburst K-12 Schools

INDICATOR #12 - Children Referred By Part C

Percent of children referred by Part C, prior to age 3, who are found eligible for Part B, and who have an IEP developed and implemented by their third birthday.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 12	Children referred by Part C	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI Compliance Monitoring

Indicator Data Note:

NA = Data not available as district was not monitored in the year in which data is being reported.

District performance for this indicator is only for districts monitored in the year in which data is being reported. The OPI reviews a sample of student records as part of its compliance monitoring activities to determine if children referred by a Part C Service Provider Agency have an IEP in place at the age of three. A review of student records is to identify noncompliance issues with respect to 34 CFR 300.111 Child Find or 34 CFR 300.124 Transition of children from the Part C program to preschool programs.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0594 Sunset Elem

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0594 Sunset Elem

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0594 Sunset Elem

INDICATOR #3 - Statewide Assessments

Participation and performance of children with disabilities on statewide assessments:

3A. Has District met the state's AYP objectives for progress for disability subgroup?

3B. Participation rate for children with IEPs in statewide assessments.

3C. Proficiency rate for children with IEPs against grade-level standards and alternate achievement standards.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 3A	Assessment -- Meeting AYP Objectives	*	*	*	*	*	*	*
Indicator 3B	Assessment -- Participation Rates	*	*	*	*	*	*	*
Indicator 3C	Assessment -- Proficiency Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0594 Sunset Elem

INDICATOR #4 - Suspension and Expulsion Rates

Districts who have been identified as having a significant discrepancy in long-term suspension and expulsion rates.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 4A	Suspension and Expulsion Rates	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

OPI School Discipline Data Collection reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The assessment of a school district's performance based on long-term suspension and expulsion rates is done by comparing the suspension and expulsion rates for students with disabilities to the long-term suspension and expulsion rates for nondisabled students. Long-term suspension or expulsion is defined as a suspension or expulsion that results in removal of a student, out-of-school, for greater than 10 school days or a student with multiple short-term (10 school days or less) out-of-school suspensions or expulsions that sum to greater than 10 school days during the school year.

For each racial/ethnic group, a statistical test of the difference between proportions is conducted to determine if the size of difference between the school district's special education long-term suspension and expulsion rates and the long-term suspension and expulsion rates for regular education students in the school district is statistically significant. In our comparison of long-term suspension and expulsion rates, we have set a .05 level of significance. This means, we are 95 percent confident that the differences between the rates are real (significant) and not due to random factors. However, the precision and reliability of this method is dependent upon having a large enough sample size to be representative of the school district's population and so, we also employ a minimum sample size (minimum N) of 10.

If the difference between the long-term suspension and expulsion rates for students with disabilities and the rates for nondisabled students by race/ethnicity group is statistically significant for a specific school district, the school district is flagged for additional investigation to determine if a significant discrepancy is occurring in the rates of long-term suspensions and expulsions of students with disabilities in a school year. This includes validation of the school district's long-term suspension and expulsion data and a systematic review of complaints/mediation/due process information, compliance monitoring and program data.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0594 Sunset Elem

INDICATOR #5 - Education Environment Rates

Percent of children with IEPs, aged 6-21,

5A. Removed from the regular class less than 21% of the school day.

5B. Removed from regular class greater than 60% of the day; or

5C. Served in public or private separate schools, residential placements, or homebound or hospital placements.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 5A	Education Environment Rate -- Reg Class > 80% of day	*	*	*	*	*	*	*
Indicator 5B	Education Environment Rate -- Reg Class < 40% of day	*	*	*	*	*	*	*
Indicator 5C	Education Environment Rate -- Sep Schls	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0594 Sunset Elem

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0594 Sunset Elem

INDICATOR #12 - Children Referred By Part C

Percent of children referred by Part C, prior to age 3, who are found eligible for Part B, and who have an IEP developed and implemented by their third birthday.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 12	Children referred by Part C	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI Compliance Monitoring

Indicator Data Note:

NA = Data not available as district was not monitored in the year in which data is being reported.

District performance for this indicator is only for districts monitored in the year in which data is being reported. The OPI reviews a sample of student records as part of its compliance monitoring activities to determine if children referred by a Part C Service Provider Agency have an IEP in place at the age of three. A review of student records is to identify noncompliance issues with respect to 34 CFR 300.111 Child Find or 34 CFR 300.124 Transition of children from the Part C program to preschool programs.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0579 Superior K-12 Schools

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0579 Superior K-12 Schools

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	23	1	0.04 (4%)	0.00039	0.81095	0.058 (5.8%)	Met

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0579 Superior K-12 Schools

INDICATOR #3 - Statewide Assessments

Participation and performance of children with disabilities on statewide assessments:

3A. Has District met the state's AYP objectives for progress for disability subgroup?

3B. Participation rate for children with IEPs in statewide assessments.

3C. Proficiency rate for children with IEPs against grade-level standards and alternate achievement standards.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 3A	Assessment -- Meeting AYP Objectives			(%)			NA	Not Met
Indicator 3B	Assessment -- Participation Rates	82	84	1 (100%)	0.95628	1	0.98 (98%)	Met
Indicator 3C	Assessment -- Proficiency Rates	82	15	0.18 (18%)	0.06139	0.43371	0.295 (29.5%)	Met

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0579 Superior K-12 Schools

INDICATOR #4 - Suspension and Expulsion Rates

Districts who have been identified as having a significant discrepancy in long-term suspension and expulsion rates.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 4A	Suspension and Expulsion Rates	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

OPI School Discipline Data Collection reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The assessment of a school district's performance based on long-term suspension and expulsion rates is done by comparing the suspension and expulsion rates for students with disabilities to the long-term suspension and expulsion rates for nondisabled students. Long-term suspension or expulsion is defined as a suspension or expulsion that results in removal of a student, out-of-school, for greater than 10 school days or a student with multiple short-term (10 school days or less) out-of-school suspensions or expulsions that sum to greater than 10 school days during the school year.

For each racial/ethnic group, a statistical test of the difference between proportions is conducted to determine if the size of difference between the school district's special education long-term suspension and expulsion rates and the long-term suspension and expulsion rates for regular education students in the school district is statistically significant. In our comparison of long-term suspension and expulsion rates, we have set a .05 level of significance. This means, we are 95 percent confident that the differences between the rates are real (significant) and not due to random factors. However, the precision and reliability of this method is dependent upon having a large enough sample size to be representative of the school district's population and so, we also employ a minimum sample size (minimum N) of 10.

If the difference between the long-term suspension and expulsion rates for students with disabilities and the rates for nondisabled students by race/ethnicity group is statistically significant for a specific school district, the school district is flagged for additional investigation to determine if a significant discrepancy is occurring in the rates of long-term suspensions and expulsions of students with disabilities in a school year. This includes validation of the school district's long-term suspension and expulsion data and a systematic review of complaints/mediation/due process information, compliance monitoring and program data.

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

0579 Superior K-12 Schools

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0579 Superior K-12 Schools

INDICATOR #12 - Children Referred By Part C

Percent of children referred by Part C, prior to age 3, who are found eligible for Part B, and who have an IEP developed and implemented by their third birthday.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 12	Children referred by Part C	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI Compliance Monitoring

Indicator Data Note:

NA = Data not available as district was not monitored in the year in which data is being reported.

District performance for this indicator is only for districts monitored in the year in which data is being reported. The OPI reviews a sample of student records as part of its compliance monitoring activities to determine if children referred by a Part C Service Provider Agency have an IEP in place at the age of three. A review of student records is to identify noncompliance issues with respect to 34 CFR 300.111 Child Find or 34 CFR 300.124 Transition of children from the Part C program to preschool programs.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

0486 Swan Lake-Salmon Elem

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0486 Swan Lake-Salmon Elem

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

0486 Swan Lake-Salmon Elem

INDICATOR #3 - Statewide Assessments

Participation and performance of children with disabilities on statewide assessments:

3A. Has District met the state's AYP objectives for progress for disability subgroup?

3B. Participation rate for children with IEPs in statewide assessments.

3C. Proficiency rate for children with IEPs against grade-level standards and alternate achievement standards.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 3A	Assessment -- Meeting AYP Objectives	NA	NA	NA	NA	NA	NA	NA
Indicator 3B	Assessment -- Participation Rates	NA	NA	NA	NA	NA	NA	NA
Indicator 3C	Assessment -- Proficiency Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0486 Swan Lake-Salmon Elem

INDICATOR #4 - Suspension and Expulsion Rates

Districts who have been identified as having a significant discrepancy in long-term suspension and expulsion rates.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 4A	Suspension and Expulsion Rates	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

OPI School Discipline Data Collection reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The assessment of a school district's performance based on long-term suspension and expulsion rates is done by comparing the suspension and expulsion rates for students with disabilities to the long-term suspension and expulsion rates for nondisabled students. Long-term suspension or expulsion is defined as a suspension or expulsion that results in removal of a student, out-of-school, for greater than 10 school days or a student with multiple short-term (10 school days or less) out-of-school suspensions or expulsions that sum to greater than 10 school days during the school year.

For each racial/ethnic group, a statistical test of the difference between proportions is conducted to determine if the size of difference between the school district's special education long-term suspension and expulsion rates and the long-term suspension and expulsion rates for regular education students in the school district is statistically significant. In our comparison of long-term suspension and expulsion rates, we have set a .05 level of significance. This means, we are 95 percent confident that the differences between the rates are real (significant) and not due to random factors. However, the precision and reliability of this method is dependent upon having a large enough sample size to be representative of the school district's population and so, we also employ a minimum sample size (minimum N) of 10.

If the difference between the long-term suspension and expulsion rates for students with disabilities and the rates for nondisabled students by race/ethnicity group is statistically significant for a specific school district, the school district is flagged for additional investigation to determine if a significant discrepancy is occurring in the rates of long-term suspensions and expulsions of students with disabilities in a school year. This includes validation of the school district's long-term suspension and expulsion data and a systematic review of complaints/mediation/due process information, compliance monitoring and program data.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0486 Swan Lake-Salmon Elem

INDICATOR #5 - Education Environment Rates

Percent of children with IEPs, aged 6-21,

5A. Removed from the regular class less than 21% of the school day.

5B. Removed from regular class greater than 60% of the day; or

5C. Served in public or private separate schools, residential placements, or homebound or hospital placements.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 5A	Education Environment Rate -- Reg Class > 80% of day	*	*	*	*	*	*	*
Indicator 5B	Education Environment Rate -- Reg Class < 40% of day	*	*	*	*	*	*	*
Indicator 5C	Education Environment Rate -- Sep Schls	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0486 Swan Lake-Salmon Elem

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0309 Swan River Elem

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0309 Swan River Elem

INDICATOR #3 - Statewide Assessments

Participation and performance of children with disabilities on statewide assessments:

3A. Has District met the state's AYP objectives for progress for disability subgroup?

3B. Participation rate for children with IEPs in statewide assessments.

3C. Proficiency rate for children with IEPs against grade-level standards and alternate achievement standards.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 3A	Assessment -- Meeting AYP Objectives	*	*	*	*	*	*	*
Indicator 3B	Assessment -- Participation Rates	26	12	0.46 (46%)	0.22518	0.71654	0.98 (98%)	Not Met
Indicator 3C	Assessment -- Proficiency Rates	*	*	*	*	*	*	*

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0309 Swan River Elem

INDICATOR #4 - Suspension and Expulsion Rates

Districts who have been identified as having a significant discrepancy in long-term suspension and expulsion rates.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 4A	Suspension and Expulsion Rates	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

OPI School Discipline Data Collection reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The assessment of a school district's performance based on long-term suspension and expulsion rates is done by comparing the suspension and expulsion rates for students with disabilities to the long-term suspension and expulsion rates for nondisabled students. Long-term suspension or expulsion is defined as a suspension or expulsion that results in removal of a student, out-of-school, for greater than 10 school days or a student with multiple short-term (10 school days or less) out-of-school suspensions or expulsions that sum to greater than 10 school days during the school year.

For each racial/ethnic group, a statistical test of the difference between proportions is conducted to determine if the size of difference between the school district's special education long-term suspension and expulsion rates and the long-term suspension and expulsion rates for regular education students in the school district is statistically significant. In our comparison of long-term suspension and expulsion rates, we have set a .05 level of significance. This means, we are 95 percent confident that the differences between the rates are real (significant) and not due to random factors. However, the precision and reliability of this method is dependent upon having a large enough sample size to be representative of the school district's population and so, we also employ a minimum sample size (minimum N) of 10.

If the difference between the long-term suspension and expulsion rates for students with disabilities and the rates for nondisabled students by race/ethnicity group is statistically significant for a specific school district, the school district is flagged for additional investigation to determine if a significant discrepancy is occurring in the rates of long-term suspensions and expulsions of students with disabilities in a school year. This includes validation of the school district's long-term suspension and expulsion data and a systematic review of complaints/mediation/due process information, compliance monitoring and program data.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0309 Swan River Elem

INDICATOR #5 - Education Environment Rates

Percent of children with IEPs, aged 6-21,

5A. Removed from the regular class less than 21% of the school day.

5B. Removed from regular class greater than 60% of the day; or

5C. Served in public or private separate schools, residential placements, or homebound or hospital placements.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 5A	Education Environment Rate -- Reg Class > 80% of day	11	10	0.91 (91%)	0.6063	0.98487	0.5 (50%)	Met
Indicator 5B	Education Environment Rate -- Reg Class < 40% of day	11	1	0.09 (9%)	0.00197	0.82898	0.12 (12%)	Met
Indicator 5C	Education Environment Rate -- Sep Schls	11	0	0 (0%)	0	0	0.018 (1.8%)	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0309 Swan River Elem

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0309 Swan River Elem

INDICATOR #12 - Children Referred By Part C

Percent of children referred by Part C, prior to age 3, who are found eligible for Part B, and who have an IEP developed and implemented by their third birthday.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 12	Children referred by Part C	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI Compliance Monitoring

Indicator Data Note:

NA = Data not available as district was not monitored in the year in which data is being reported.

District performance for this indicator is only for districts monitored in the year in which data is being reported. The OPI reviews a sample of student records as part of its compliance monitoring activities to determine if children referred by a Part C Service Provider Agency have an IEP in place at the age of three. A review of student records is to identify noncompliance issues with respect to 34 CFR 300.111 Child Find or 34 CFR 300.124 Transition of children from the Part C program to preschool programs.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0596 Swan Valley Elem

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0596 Swan Valley Elem

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0596 Swan Valley Elem

INDICATOR #3 - Statewide Assessments

Participation and performance of children with disabilities on statewide assessments:

3A. Has District met the state's AYP objectives for progress for disability subgroup?

3B. Participation rate for children with IEPs in statewide assessments.

3C. Proficiency rate for children with IEPs against grade-level standards and alternate achievement standards.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 3A	Assessment -- Meeting AYP Objectives	*	*	*	*	*	*	*
Indicator 3B	Assessment -- Participation Rates	10	18	1 (100%)	0.82416	1.00002	0.98 (98%)	Met
Indicator 3C	Assessment -- Proficiency Rates	*	*	*	*	*	*	*

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0596 Swan Valley Elem

INDICATOR #4 - Suspension and Expulsion Rates

Districts who have been identified as having a significant discrepancy in long-term suspension and expulsion rates.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 4A	Suspension and Expulsion Rates	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

OPI School Discipline Data Collection reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The assessment of a school district's performance based on long-term suspension and expulsion rates is done by comparing the suspension and expulsion rates for students with disabilities to the long-term suspension and expulsion rates for nondisabled students. Long-term suspension or expulsion is defined as a suspension or expulsion that results in removal of a student, out-of-school, for greater than 10 school days or a student with multiple short-term (10 school days or less) out-of-school suspensions or expulsions that sum to greater than 10 school days during the school year.

For each racial/ethnic group, a statistical test of the difference between proportions is conducted to determine if the size of difference between the school district's special education long-term suspension and expulsion rates and the long-term suspension and expulsion rates for regular education students in the school district is statistically significant. In our comparison of long-term suspension and expulsion rates, we have set a .05 level of significance. This means, we are 95 percent confident that the differences between the rates are real (significant) and not due to random factors. However, the precision and reliability of this method is dependent upon having a large enough sample size to be representative of the school district's population and so, we also employ a minimum sample size (minimum N) of 10.

If the difference between the long-term suspension and expulsion rates for students with disabilities and the rates for nondisabled students by race/ethnicity group is statistically significant for a specific school district, the school district is flagged for additional investigation to determine if a significant discrepancy is occurring in the rates of long-term suspensions and expulsions of students with disabilities in a school year. This includes validation of the school district's long-term suspension and expulsion data and a systematic review of complaints/mediation/due process information, compliance monitoring and program data.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0596 Swan Valley Elem

INDICATOR #5 - Education Environment Rates

Percent of children with IEPs, aged 6-21,

5A. Removed from the regular class less than 21% of the school day.

5B. Removed from regular class greater than 60% of the day; or

5C. Served in public or private separate schools, residential placements, or homebound or hospital placements.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 5A	Education Environment Rate -- Reg Class > 80% of day	*	*	*	*	*	*	*
Indicator 5B	Education Environment Rate -- Reg Class < 40% of day	*	*	*	*	*	*	*
Indicator 5C	Education Environment Rate -- Sep Schls	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0596 Swan Valley Elem

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0596 Swan Valley Elem

INDICATOR #12 - Children Referred By Part C

Percent of children referred by Part C, prior to age 3, who are found eligible for Part B, and who have an IEP developed and implemented by their third birthday.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 12	Children referred by Part C	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI Compliance Monitoring

Indicator Data Note:

NA = Data not available as district was not monitored in the year in which data is being reported.

District performance for this indicator is only for districts monitored in the year in which data is being reported. The OPI reviews a sample of student records as part of its compliance monitoring activities to determine if children referred by a Part C Service Provider Agency have an IEP in place at the age of three. A review of student records is to identify noncompliance issues with respect to 34 CFR 300.111 Child Find or 34 CFR 300.124 Transition of children from the Part C program to preschool programs.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0882 Sweet Grass County H S

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

0882 Sweet Grass County H S

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	22	1	0.05 (5%)	0.00044	0.81172	0.058 (5.8%)	Met

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0882 Sweet Grass County H S

INDICATOR #3 - Statewide Assessments

Participation and performance of children with disabilities on statewide assessments:

3A. Has District met the state's AYP objectives for progress for disability subgroup?

3B. Participation rate for children with IEPs in statewide assessments.

3C. Proficiency rate for children with IEPs against grade-level standards and alternate achievement standards.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 3A	Assessment -- Meeting AYP Objectives	*	*	*	*	*	*	*
Indicator 3B	Assessment -- Participation Rates	12	12	1 (100%)	0.75755	1.00003	0.98 (98%)	Met
Indicator 3C	Assessment -- Proficiency Rates	*	*	*	*	*	*	*

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

Indicator 5B	Education Environment Rate -- Reg Class < 40% of day	22	4	0.18 (18%)	0.0259	0.64941	0.12 (12%)	Met
Indicator 5C	Education Environment Rate -- Sep Schls	22	0	0 (0%)	0	0	0.018 (1.8%)	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0882 Sweet Grass County H S

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0882 Sweet Grass County H S

INDICATOR #12 - Children Referred By Part C

Percent of children referred by Part C, prior to age 3, who are found eligible for Part B, and who have an IEP developed and implemented by their third birthday.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 12	Children referred by Part C	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI Compliance Monitoring

Indicator Data Note:

NA = Data not available as district was not monitored in the year in which data is being reported.

District performance for this indicator is only for districts monitored in the year in which data is being reported. The OPI reviews a sample of student records as part of its compliance monitoring activities to determine if children referred by a Part C Service Provider Agency have an IEP in place at the age of three. A review of student records is to identify noncompliance issues with respect to 34 CFR 300.111 Child Find or 34 CFR 300.124 Transition of children from the Part C program to preschool programs.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0532 Sylvanite Elem

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0532 Sylvanite Elem

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0532 Sylvanite Elem

INDICATOR #3 - Statewide Assessments

Participation and performance of children with disabilities on statewide assessments:

3A. Has District met the state's AYP objectives for progress for disability subgroup?

3B. Participation rate for children with IEPs in statewide assessments.

3C. Proficiency rate for children with IEPs against grade-level standards and alternate achievement standards.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 3A	Assessment -- Meeting AYP Objectives	NA	NA	NA	NA	NA	NA	NA
Indicator 3B	Assessment -- Participation Rates	NA	NA	NA	NA	NA	NA	NA
Indicator 3C	Assessment -- Proficiency Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0532 Sylvanite Elem

INDICATOR #4 - Suspension and Expulsion Rates

Districts who have been identified as having a significant discrepancy in long-term suspension and expulsion rates.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 4A	Suspension and Expulsion Rates	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

OPI School Discipline Data Collection reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The assessment of a school district's performance based on long-term suspension and expulsion rates is done by comparing the suspension and expulsion rates for students with disabilities to the long-term suspension and expulsion rates for nondisabled students. Long-term suspension or expulsion is defined as a suspension or expulsion that results in removal of a student, out-of-school, for greater than 10 school days or a student with multiple short-term (10 school days or less) out-of-school suspensions or expulsions that sum to greater than 10 school days during the school year.

For each racial/ethnic group, a statistical test of the difference between proportions is conducted to determine if the size of difference between the school district's special education long-term suspension and expulsion rates and the long-term suspension and expulsion rates for regular education students in the school district is statistically significant. In our comparison of long-term suspension and expulsion rates, we have set a .05 level of significance. This means, we are 95 percent confident that the differences between the rates are real (significant) and not due to random factors. However, the precision and reliability of this method is dependent upon having a large enough sample size to be representative of the school district's population and so, we also employ a minimum sample size (minimum N) of 10.

If the difference between the long-term suspension and expulsion rates for students with disabilities and the rates for nondisabled students by race/ethnicity group is statistically significant for a specific school district, the school district is flagged for additional investigation to determine if a significant discrepancy is occurring in the rates of long-term suspensions and expulsions of students with disabilities in a school year. This includes validation of the school district's long-term suspension and expulsion data and a systematic review of complaints/mediation/due process information, compliance monitoring and program data.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0532 Sylvanite Elem

INDICATOR #5 - Education Environment Rates

Percent of children with IEPs, aged 6-21,

5A. Removed from the regular class less than 21% of the school day.

5B. Removed from regular class greater than 60% of the day; or

5C. Served in public or private separate schools, residential placements, or homebound or hospital placements.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 5A	Education Environment Rate -- Reg Class > 80% of day	*	*	*	*	*	*	*
Indicator 5B	Education Environment Rate -- Reg Class < 40% of day	*	*	*	*	*	*	*
Indicator 5C	Education Environment Rate -- Sep Schls	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0532 Sylvanite Elem

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

Indicator Data Source:

OPI Compliance Monitoring

Indicator Data Note:

NA = Data not available as district was not monitored in the year in which data is being reported.

District performance for this indicator is only for districts monitored in the year in which data is being reported. The OPI reviews a sample of student records as part of its compliance monitoring activities to determine if children referred by a Part C Service Provider Agency have an IEP in place at the age of three. A review of student records is to identify noncompliance issues with respect to 34 CFR 300.111 Child Find or 34 CFR 300.124 Transition of children from the Part C program to preschool programs.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0593 Target Range Elem

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

0593 Target Range Elem

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

Indicator 3B	Assessment -- Participation Rates	82	82	1 (100%)	0.95526	1	0.98 (98%)	Met
Indicator 3C	Assessment -- Proficiency Rates	82	45	0.55 (55%)	0.40533	0.68456	0.295 (29.5%)	Met

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0593 Target Range Elem

INDICATOR #4 - Suspension and Expulsion Rates

Districts who have been identified as having a significant discrepancy in long-term suspension and expulsion rates.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 4A	Suspension and Expulsion Rates	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

OPI School Discipline Data Collection reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The assessment of a school district's performance based on long-term suspension and expulsion rates is done by comparing the suspension and expulsion rates for students with disabilities to the long-term suspension and expulsion rates for nondisabled students. Long-term suspension or expulsion is defined as a suspension or expulsion that results in removal of a student, out-of-school, for greater than 10 school days or a student with multiple short-term (10 school days or less) out-of-school suspensions or expulsions that sum to greater than 10 school days during the school year.

For each racial/ethnic group, a statistical test of the difference between proportions is conducted to determine if the size of difference between the school district's special education long-term suspension and expulsion rates and the long-term suspension and expulsion rates for regular education students in the school district is statistically significant. In our comparison of long-term suspension and expulsion rates, we have set a .05 level of significance. This means, we are 95 percent confident that the differences between the rates are real (significant) and not due to random factors. However, the precision and reliability of this method is dependent upon having a large enough sample size to be representative of the school district's population and so, we also employ a minimum sample size (minimum N) of 10.

If the difference between the long-term suspension and expulsion rates for students with disabilities and the rates for nondisabled students by race/ethnicity group is statistically significant for a specific school district, the school district is flagged for additional investigation to determine if a significant discrepancy is occurring in the rates of long-term suspensions and expulsions of students with disabilities in a school year. This includes validation of the school district's long-term suspension and expulsion data and a systematic review of complaints/mediation/due process information, compliance monitoring and program data.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

District Name 0593 Target Range Elem

INDICATOR #5 - Education Environment Rates

Percent of children with IEPs, aged 6-21,

5A. Removed from the regular class less than 21% of the school day.

5B. Removed from regular class greater than 60% of the day; or

5C. Served in public or private separate schools, residential placements, or homebound or hospital placements.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 5A	Education Environment Rate -- Reg Class > 80% of day	54	32	0.59 (59%)	0.4215	0.74384	0.5 (50%)	Met
Indicator 5B	Education Environment Rate -- Reg Class < 40% of day	54	2	0.04 (4%)	0.00061	0.68228	0.12 (12%)	Met
Indicator 5C	Education Environment Rate -- Sep Schls	54	0	0 (0%)	0	0	0.018 (1.8%)	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0593 Target Range Elem

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0593 Target Range Elem

INDICATOR #12 - Children Referred By Part C

Percent of children referred by Part C, prior to age 3, who are found eligible for Part B, and who have an IEP developed and implemented by their third birthday.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 12	Children referred by Part C	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI Compliance Monitoring

Indicator Data Note:

NA = Data not available as district was not monitored in the year in which data is being reported.

District performance for this indicator is only for districts monitored in the year in which data is being reported. The OPI reviews a sample of student records as part of its compliance monitoring activities to determine if children referred by a Part C Service Provider Agency have an IEP in place at the age of three. A review of student records is to identify noncompliance issues with respect to 34 CFR 300.111 Child Find or 34 CFR 300.124 Transition of children from the Part C program to preschool programs.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0726 Terry K-12 Schools

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0726 Terry K-12 Schools

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	10	0	0 (0%)	0	0	0.058 (5.8%)	Met

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

INDICATOR #3 - Statewide Assessments

Participation and performance of children with disabilities on statewide assessments:

3A. Has District met the state's AYP objectives for progress for disability subgroup?

3B. Participation rate for children with IEPs in statewide assessments.

3C. Proficiency rate for children with IEPs against grade-level standards and alternate achievement standards.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 3A	Assessment -- Meeting AYP Objectives	*	*	*	*	*	*	*
Indicator 3B	Assessment -- Participation Rates	10	10	1 (100%)	0.72251	1.00003	0.98 (98%)	Met
Indicator 3C	Assessment -- Proficiency Rates	*	*	*	*	*	*	*

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0726 Terry K-12 Schools

INDICATOR #4 - Suspension and Expulsion Rates

Districts who have been identified as having a significant discrepancy in long-term suspension and expulsion rates.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 4A	Suspension and Expulsion Rates	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

OPI School Discipline Data Collection reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The assessment of a school district's performance based on long-term suspension and expulsion rates is done by comparing the suspension and expulsion rates for students with disabilities to the long-term suspension and expulsion rates for nondisabled students. Long-term suspension or expulsion is defined as a suspension or expulsion that results in removal of a student, out-of-school, for greater than 10 school days or a student with multiple short-term (10 school days or less) out-of-school suspensions or expulsions that sum to greater than 10 school days during the school year.

For each racial/ethnic group, a statistical test of the difference between proportions is conducted to determine if the size of difference between the school district's special education long-term suspension and expulsion rates and the long-term suspension and expulsion rates for regular education students in the school district is statistically significant. In our comparison of long-term suspension and expulsion rates, we have set a .05 level of significance. This means, we are 95 percent confident that the differences between the rates are real (significant) and not due to random factors. However, the precision and reliability of this method is dependent upon having a large enough sample size to be representative of the school district's population and so, we also employ a minimum sample size (minimum N) of 10.

If the difference between the long-term suspension and expulsion rates for students with disabilities and the rates for nondisabled students by race/ethnicity group is statistically significant for a specific school district, the school district is flagged for additional investigation to determine if a significant discrepancy is occurring in the rates of long-term suspensions and expulsions of students with disabilities in a school year. This includes validation of the school district's long-term suspension and expulsion data and a systematic review of complaints/mediation/due process information, compliance monitoring and program data.

Indicator 5B	Education Environment Rate -- Reg Class < 40% of day	17	2	0.12 (12%)	0.0064	0.73171	0.12 (12%)	Met
Indicator 5C	Education Environment Rate -- Sep Schls	17	0	0 (0%)	0	0	0.018 (1.8%)	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0726 Terry K-12 Schools

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0726 Terry K-12 Schools

INDICATOR #12 - Children Referred By Part C

Percent of children referred by Part C, prior to age 3, who are found eligible for Part B, and who have an IEP developed and implemented by their third birthday.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 12	Children referred by Part C	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI Compliance Monitoring

Indicator Data Note:

NA = Data not available as district was not monitored in the year in which data is being reported.

District performance for this indicator is only for districts monitored in the year in which data is being reported. The OPI reviews a sample of student records as part of its compliance monitoring activities to determine if children referred by a Part C Service Provider Agency have an IEP in place at the age of three. A review of student records is to identify noncompliance issues with respect to 34 CFR 300.111 Child Find or 34 CFR 300.124 Transition of children from the Part C program to preschool programs.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0804 Thompson Falls Elem

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

0804 Thompson Falls Elem

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0804 Thompson Falls Elem

INDICATOR #3 - Statewide Assessments

Participation and performance of children with disabilities on statewide assessments:

3A. Has District met the state's AYP objectives for progress for disability subgroup?

3B. Participation rate for children with IEPs in statewide assessments.

3C. Proficiency rate for children with IEPs against grade-level standards and alternate achievement standards.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 3A	Assessment -- Meeting AYP Objectives	*	*	*	*	*	*	*
Indicator 3B	Assessment -- Participation Rates	44	40	0.91 (91%)	0.78092	0.9656	0.98 (98%)	Not Met
Indicator 3C	Assessment -- Proficiency Rates	*	*	*	*	*	*	*

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0804 Thompson Falls Elem

INDICATOR #4 - Suspension and Expulsion Rates

Districts who have been identified as having a significant discrepancy in long-term suspension and expulsion rates.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 4A	Suspension and Expulsion Rates	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

OPI School Discipline Data Collection reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The assessment of a school district's performance based on long-term suspension and expulsion rates is done by comparing the suspension and expulsion rates for students with disabilities to the long-term suspension and expulsion rates for nondisabled students. Long-term suspension or expulsion is defined as a suspension or expulsion that results in removal of a student, out-of-school, for greater than 10 school days or a student with multiple short-term (10 school days or less) out-of-school suspensions or expulsions that sum to greater than 10 school days during the school year.

For each racial/ethnic group, a statistical test of the difference between proportions is conducted to determine if the size of difference between the school district's special education long-term suspension and expulsion rates and the long-term suspension and expulsion rates for regular education students in the school district is statistically significant. In our comparison of long-term suspension and expulsion rates, we have set a .05 level of significance. This means, we are 95 percent confident that the differences between the rates are real (significant) and not due to random factors. However, the precision and reliability of this method is dependent upon having a large enough sample size to be representative of the school district's population and so, we also employ a minimum sample size (minimum N) of 10.

If the difference between the long-term suspension and expulsion rates for students with disabilities and the rates for nondisabled students by race/ethnicity group is statistically significant for a specific school district, the school district is flagged for additional investigation to determine if a significant discrepancy is occurring in the rates of long-term suspensions and expulsions of students with disabilities in a school year. This includes validation of the school district's long-term suspension and expulsion data and a systematic review of complaints/mediation/due process information, compliance monitoring and program data.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0804 Thompson Falls Elem

INDICATOR #5 - Education Environment Rates

Percent of children with IEPs, aged 6-21,

5A. Removed from the regular class less than 21% of the school day.

5B. Removed from regular class greater than 60% of the day; or

5C. Served in public or private separate schools, residential placements, or homebound or hospital placements.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 5A	Education Environment Rate -- Reg Class > 80% of day	34	20	0.59 (59%)	0.37595	0.77209	0.5 (50%)	Met
Indicator 5B	Education Environment Rate -- Reg Class < 40% of day	34	0	0 (0%)	0	0	0.12 (12%)	Met
Indicator 5C	Education Environment Rate -- Sep Schls	34	0	0 (0%)	0	0	0.018 (1.8%)	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0804 Thompson Falls Elem

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

Indicator Data Source:

OPI Compliance Monitoring

Indicator Data Note:

NA = Data not available as district was not monitored in the year in which data is being reported.

District performance for this indicator is only for districts monitored in the year in which data is being reported. The OPI reviews a sample of student records as part of its compliance monitoring activities to determine if children referred by a Part C Service Provider Agency have an IEP in place at the age of three. A review of student records is to identify noncompliance issues with respect to 34 CFR 300.111 Child Find or 34 CFR 300.124 Transition of children from the Part C program to preschool programs.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0805 Thompson Falls H S

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	24	1	0.04 (4%)	0.00035	0.81024	0.058 (5.8%)	Met

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

0805 Thompson Falls H S

INDICATOR #3 - Statewide Assessments

Participation and performance of children with disabilities on statewide assessments:

3A. Has District met the state's AYP objectives for progress for disability subgroup?

3B. Participation rate for children with IEPs in statewide assessments.

3C. Proficiency rate for children with IEPs against grade-level standards and alternate achievement standards.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 3A	Assessment -- Meeting AYP Objectives	*	*	*	*	*	*	*
Indicator 3B	Assessment -- Participation Rates	14	12	0.86 (86%)	0.5777	0.96343	0.98 (98%)	Not Met
Indicator 3C	Assessment -- Proficiency Rates	*	*	*	*	*	*	*

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0805 Thompson Falls H S

INDICATOR #4 - Suspension and Expulsion Rates

Districts who have been identified as having a significant discrepancy in long-term suspension and expulsion rates.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 4A	Suspension and Expulsion Rates	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

OPI School Discipline Data Collection reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The assessment of a school district's performance based on long-term suspension and expulsion rates is done by comparing the suspension and expulsion rates for students with disabilities to the long-term suspension and expulsion rates for nondisabled students. Long-term suspension or expulsion is defined as a suspension or expulsion that results in removal of a student, out-of-school, for greater than 10 school days or a student with multiple short-term (10 school days or less) out-of-school suspensions or expulsions that sum to greater than 10 school days during the school year.

For each racial/ethnic group, a statistical test of the difference between proportions is conducted to determine if the size of difference between the school district's special education long-term suspension and expulsion rates and the long-term suspension and expulsion rates for regular education students in the school district is statistically significant. In our comparison of long-term suspension and expulsion rates, we have set a .05 level of significance. This means, we are 95 percent confident that the differences between the rates are real (significant) and not due to random factors. However, the precision and reliability of this method is dependent upon having a large enough sample size to be representative of the school district's population and so, we also employ a minimum sample size (minimum N) of 10.

If the difference between the long-term suspension and expulsion rates for students with disabilities and the rates for nondisabled students by race/ethnicity group is statistically significant for a specific school district, the school district is flagged for additional investigation to determine if a significant discrepancy is occurring in the rates of long-term suspensions and expulsions of students with disabilities in a school year. This includes validation of the school district's long-term suspension and expulsion data and a systematic review of complaints/mediation/due process information, compliance monitoring and program data.

For School Year: 2005-2006

District Name

0805 Thompson Falls H S

INDICATOR #5 - Education Environment Rates

Percent of children with IEPs, aged 6-21,

5A. Removed from the regular class less than 21% of the school day.

5B. Removed from regular class greater than 60% of the day; or

5C. Served in public or private separate schools, residential placements, or homebound or hospital placements.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 5A	Education Environment Rate -- Reg Class > 80% of day	24	11	0.46 (46%)	0.21537	0.72285	0.5 (50%)	Met
Indicator 5B	Education Environment Rate -- Reg Class < 40% of day	24	2	0.08 (8%)	0.00326	0.71134	0.12 (12%)	Met
Indicator 5C	Education Environment Rate -- Sep Schls	24	0	0 (0%)	0	0	0.018 (1.8%)	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

0805 Thompson Falls H S

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

0805 Thompson Falls H S

INDICATOR #12 - Children Referred By Part C

Percent of children referred by Part C, prior to age 3, who are found eligible for Part B, and who have an IEP developed and implemented by their third birthday.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 12	Children referred by Part C	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI Compliance Monitoring

Indicator Data Note:

NA = Data not available as district was not monitored in the year in which data is being reported.

District performance for this indicator is only for districts monitored in the year in which data is being reported. The OPI reviews a sample of student records as part of its compliance monitoring activities to determine if children referred by a Part C Service Provider Agency have an IEP in place at the age of three. A review of student records is to identify noncompliance issues with respect to 34 CFR 300.111 Child Find or 34 CFR 300.124 Transition of children from the Part C program to preschool programs.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0360 Three Forks Elem

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0360 Three Forks Elem

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

INDICATOR #3 - Statewide Assessments

Participation and performance of children with disabilities on statewide assessments:

3A. Has District met the state's AYP objectives for progress for disability subgroup?

3B. Participation rate for children with IEPs in statewide assessments.

3C. Proficiency rate for children with IEPs against grade-level standards and alternate achievement standards.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 3A	Assessment -- Meeting AYP Objectives	*	*	*	*	*	*	*
Indicator 3B	Assessment -- Participation Rates	28	26	0.93 (93%)	0.7658	0.98104	0.98 (98%)	Met
Indicator 3C	Assessment -- Proficiency Rates	28	10	0.36 (36%)	0.14124	0.65232	0.295 (29.5%)	Met

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0360 Three Forks Elem

INDICATOR #4 - Suspension and Expulsion Rates

Districts who have been identified as having a significant discrepancy in long-term suspension and expulsion rates.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 4A	Suspension and Expulsion Rates	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

OPI School Discipline Data Collection reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The assessment of a school district's performance based on long-term suspension and expulsion rates is done by comparing the suspension and expulsion rates for students with disabilities to the long-term suspension and expulsion rates for nondisabled students. Long-term suspension or expulsion is defined as a suspension or expulsion that results in removal of a student, out-of-school, for greater than 10 school days or a student with multiple short-term (10 school days or less) out-of-school suspensions or expulsions that sum to greater than 10 school days during the school year.

For each racial/ethnic group, a statistical test of the difference between proportions is conducted to determine if the size of difference between the school district's special education long-term suspension and expulsion rates and the long-term suspension and expulsion rates for regular education students in the school district is statistically significant. In our comparison of long-term suspension and expulsion rates, we have set a .05 level of significance. This means, we are 95 percent confident that the differences between the rates are real (significant) and not due to random factors. However, the precision and reliability of this method is dependent upon having a large enough sample size to be representative of the school district's population and so, we also employ a minimum sample size (minimum N) of 10.

If the difference between the long-term suspension and expulsion rates for students with disabilities and the rates for nondisabled students by race/ethnicity group is statistically significant for a specific school district, the school district is flagged for additional investigation to determine if a significant discrepancy is occurring in the rates of long-term suspensions and expulsions of students with disabilities in a school year. This includes validation of the school district's long-term suspension and expulsion data and a systematic review of complaints/mediation/due process information, compliance monitoring and program data.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0360 Three Forks Elem

INDICATOR #5 - Education Environment Rates

Percent of children with IEPs, aged 6-21,

5A. Removed from the regular class less than 21% of the school day.

5B. Removed from regular class greater than 60% of the day; or

5C. Served in public or private separate schools, residential placements, or homebound or hospital placements.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 5A	Education Environment Rate -- Reg Class > 80% of day	25	16	0.64 (64%)	0.39995	0.82585	0.5 (50%)	Met
Indicator 5B	Education Environment Rate -- Reg Class < 40% of day	25	2	0.08 (8%)	0.00301	0.70931	0.12 (12%)	Met
Indicator 5C	Education Environment Rate -- Sep Schls	25	0	0 (0%)	0	0	0.018 (1.8%)	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0360 Three Forks Elem

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0360 Three Forks Elem

INDICATOR #12 - Children Referred By Part C

Percent of children referred by Part C, prior to age 3, who are found eligible for Part B, and who have an IEP developed and implemented by their third birthday.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 12	Children referred by Part C	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI Compliance Monitoring

Indicator Data Note:

NA = Data not available as district was not monitored in the year in which data is being reported.

District performance for this indicator is only for districts monitored in the year in which data is being reported. The OPI reviews a sample of student records as part of its compliance monitoring activities to determine if children referred by a Part C Service Provider Agency have an IEP in place at the age of three. A review of student records is to identify noncompliance issues with respect to 34 CFR 300.111 Child Find or 34 CFR 300.124 Transition of children from the Part C program to preschool programs.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0361 Three Forks H S

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0361 Three Forks H S

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

0361 Three Forks H S

INDICATOR #3 - Statewide Assessments

Participation and performance of children with disabilities on statewide assessments:

3A. Has District met the state's AYP objectives for progress for disability subgroup?

3B. Participation rate for children with IEPs in statewide assessments.

3C. Proficiency rate for children with IEPs against grade-level standards and alternate achievement standards.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 3A	Assessment -- Meeting AYP Objectives	*	*	*	*	*	*	*
Indicator 3B	Assessment -- Participation Rates	*	*	*	*	*	*	*
Indicator 3C	Assessment -- Proficiency Rates	*	*	*	*	*	*	*

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0361 Three Forks H S

INDICATOR #4 - Suspension and Expulsion Rates

Districts who have been identified as having a significant discrepancy in long-term suspension and expulsion rates.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 4A	Suspension and Expulsion Rates	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

OPI School Discipline Data Collection reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The assessment of a school district's performance based on long-term suspension and expulsion rates is done by comparing the suspension and expulsion rates for students with disabilities to the long-term suspension and expulsion rates for nondisabled students. Long-term suspension or expulsion is defined as a suspension or expulsion that results in removal of a student, out-of-school, for greater than 10 school days or a student with multiple short-term (10 school days or less) out-of-school suspensions or expulsions that sum to greater than 10 school days during the school year.

For each racial/ethnic group, a statistical test of the difference between proportions is conducted to determine if the size of difference between the school district's special education long-term suspension and expulsion rates and the long-term suspension and expulsion rates for regular education students in the school district is statistically significant. In our comparison of long-term suspension and expulsion rates, we have set a .05 level of significance. This means, we are 95 percent confident that the differences between the rates are real (significant) and not due to random factors. However, the precision and reliability of this method is dependent upon having a large enough sample size to be representative of the school district's population and so, we also employ a minimum sample size (minimum N) of 10.

If the difference between the long-term suspension and expulsion rates for students with disabilities and the rates for nondisabled students by race/ethnicity group is statistically significant for a specific school district, the school district is flagged for additional investigation to determine if a significant discrepancy is occurring in the rates of long-term suspensions and expulsions of students with disabilities in a school year. This includes validation of the school district's long-term suspension and expulsion data and a systematic review of complaints/mediation/due process information, compliance monitoring and program data.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0361 Three Forks H S

INDICATOR #5 - Education Environment Rates

Percent of children with IEPs, aged 6-21,

5A. Removed from the regular class less than 21% of the school day.

5B. Removed from regular class greater than 60% of the day; or

5C. Served in public or private separate schools, residential placements, or homebound or hospital placements.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 5A	Education Environment Rate -- Reg Class > 80% of day	*	*	*	*	*	*	*
Indicator 5B	Education Environment Rate -- Reg Class < 40% of day	*	*	*	*	*	*	*
Indicator 5C	Education Environment Rate -- Sep Schls	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0361 Three Forks H S

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

Indicator Data Source:

OPI Compliance Monitoring

Indicator Data Note:

NA = Data not available as district was not monitored in the year in which data is being reported.

District performance for this indicator is only for districts monitored in the year in which data is being reported. The OPI reviews a sample of student records as part of its compliance monitoring activities to determine if children referred by a Part C Service Provider Agency have an IEP in place at the age of three. A review of student records is to identify noncompliance issues with respect to 34 CFR 300.111 Child Find or 34 CFR 300.124 Transition of children from the Part C program to preschool programs.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0055 Townsend K-12 Schools

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0055 Townsend K-12 Schools

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	27	1	0.04 (4%)	0.00026	0.80842	0.058 (5.8%)	Met

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0055 Townsend K-12 Schools

INDICATOR #3 - Statewide Assessments

Participation and performance of children with disabilities on statewide assessments:

3A. Has District met the state's AYP objectives for progress for disability subgroup?

3B. Participation rate for children with IEPs in statewide assessments.

3C. Proficiency rate for children with IEPs against grade-level standards and alternate achievement standards.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 3A	Assessment -- Meeting AYP Objectives	*	*	*	*	*	*	*
Indicator 3B	Assessment -- Participation Rates	76	78	1 (100%)	0.95307	1	0.98 (98%)	Met
Indicator 3C	Assessment -- Proficiency Rates	76	21	0.28 (28%)	0.13167	0.49012	0.295 (29.5%)	Met

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0055 Townsend K-12 Schools

INDICATOR #4 - Suspension and Expulsion Rates

Districts who have been identified as having a significant discrepancy in long-term suspension and expulsion rates.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 4A	Suspension and Expulsion Rates	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

OPI School Discipline Data Collection reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The assessment of a school district's performance based on long-term suspension and expulsion rates is done by comparing the suspension and expulsion rates for students with disabilities to the long-term suspension and expulsion rates for nondisabled students. Long-term suspension or expulsion is defined as a suspension or expulsion that results in removal of a student, out-of-school, for greater than 10 school days or a student with multiple short-term (10 school days or less) out-of-school suspensions or expulsions that sum to greater than 10 school days during the school year.

For each racial/ethnic group, a statistical test of the difference between proportions is conducted to determine if the size of difference between the school district's special education long-term suspension and expulsion rates and the long-term suspension and expulsion rates for regular education students in the school district is statistically significant. In our comparison of long-term suspension and expulsion rates, we have set a .05 level of significance. This means, we are 95 percent confident that the differences between the rates are real (significant) and not due to random factors. However, the precision and reliability of this method is dependent upon having a large enough sample size to be representative of the school district's population and so, we also employ a minimum sample size (minimum N) of 10.

If the difference between the long-term suspension and expulsion rates for students with disabilities and the rates for nondisabled students by race/ethnicity group is statistically significant for a specific school district, the school district is flagged for additional investigation to determine if a significant discrepancy is occurring in the rates of long-term suspensions and expulsions of students with disabilities in a school year. This includes validation of the school district's long-term suspension and expulsion data and a systematic review of complaints/mediation/due process information, compliance monitoring and program data.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0055 Townsend K-12 Schools

INDICATOR #5 - Education Environment Rates

Percent of children with IEPs, aged 6-21,

5A. Removed from the regular class less than 21% of the school day.

5B. Removed from regular class greater than 60% of the day; or

5C. Served in public or private separate schools, residential placements, or homebound or hospital placements.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 5A	Education Environment Rate -- Reg Class > 80% of day	60	33	0.55 (55%)	0.38405	0.70552	0.5 (50%)	Met
Indicator 5B	Education Environment Rate -- Reg Class < 40% of day	60	4	0.07 (7%)	0.00403	0.55378	0.12 (12%)	Met
Indicator 5C	Education Environment Rate -- Sep Schls	60	0	0 (0%)	0	0	0.018 (1.8%)	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0055 Townsend K-12 Schools

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	11	3	0.27 (27%)	0.04298	0.75765	0.548 (54.8%)	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0055 Townsend K-12 Schools

INDICATOR #12 - Children Referred By Part C

Percent of children referred by Part C, prior to age 3, who are found eligible for Part B, and who have an IEP developed and implemented by their third birthday.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 12	Children referred by Part C	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI Compliance Monitoring

Indicator Data Note:

NA = Data not available as district was not monitored in the year in which data is being reported.

District performance for this indicator is only for districts monitored in the year in which data is being reported. The OPI reviews a sample of student records as part of its compliance monitoring activities to determine if children referred by a Part C Service Provider Agency have an IEP in place at the age of three. A review of student records is to identify noncompliance issues with respect to 34 CFR 300.111 Child Find or 34 CFR 300.124 Transition of children from the Part C program to preschool programs.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0177 Trail Creek Elem

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0177 Trail Creek Elem

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0177 Trail Creek Elem

INDICATOR #3 - Statewide Assessments

Participation and performance of children with disabilities on statewide assessments:

3A. Has District met the state's AYP objectives for progress for disability subgroup?

3B. Participation rate for children with IEPs in statewide assessments.

3C. Proficiency rate for children with IEPs against grade-level standards and alternate achievement standards.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 3A	Assessment -- Meeting AYP Objectives	NA	NA	NA	NA	NA	NA	NA
Indicator 3B	Assessment -- Participation Rates	NA	NA	NA	NA	NA	NA	NA
Indicator 3C	Assessment -- Proficiency Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0177 Trail Creek Elem

INDICATOR #4 - Suspension and Expulsion Rates

Districts who have been identified as having a significant discrepancy in long-term suspension and expulsion rates.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 4A	Suspension and Expulsion Rates	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

OPI School Discipline Data Collection reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The assessment of a school district's performance based on long-term suspension and expulsion rates is done by comparing the suspension and expulsion rates for students with disabilities to the long-term suspension and expulsion rates for nondisabled students. Long-term suspension or expulsion is defined as a suspension or expulsion that results in removal of a student, out-of-school, for greater than 10 school days or a student with multiple short-term (10 school days or less) out-of-school suspensions or expulsions that sum to greater than 10 school days during the school year.

For each racial/ethnic group, a statistical test of the difference between proportions is conducted to determine if the size of difference between the school district's special education long-term suspension and expulsion rates and the long-term suspension and expulsion rates for regular education students in the school district is statistically significant. In our comparison of long-term suspension and expulsion rates, we have set a .05 level of significance. This means, we are 95 percent confident that the differences between the rates are real (significant) and not due to random factors. However, the precision and reliability of this method is dependent upon having a large enough sample size to be representative of the school district's population and so, we also employ a minimum sample size (minimum N) of 10.

If the difference between the long-term suspension and expulsion rates for students with disabilities and the rates for nondisabled students by race/ethnicity group is statistically significant for a specific school district, the school district is flagged for additional investigation to determine if a significant discrepancy is occurring in the rates of long-term suspensions and expulsions of students with disabilities in a school year. This includes validation of the school district's long-term suspension and expulsion data and a systematic review of complaints/mediation/due process information, compliance monitoring and program data.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0177 Trail Creek Elem

INDICATOR #5 - Education Environment Rates

Percent of children with IEPs, aged 6-21,

5A. Removed from the regular class less than 21% of the school day.

5B. Removed from regular class greater than 60% of the day; or

5C. Served in public or private separate schools, residential placements, or homebound or hospital placements.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 5A	Education Environment Rate -- Reg Class > 80% of day	*	*	*	*	*	*	*
Indicator 5B	Education Environment Rate -- Reg Class < 40% of day	*	*	*	*	*	*	*
Indicator 5C	Education Environment Rate -- Sep Schls	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0177 Trail Creek Elem

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0177 Trail Creek Elem

INDICATOR #12 - Children Referred By Part C

Percent of children referred by Part C, prior to age 3, who are found eligible for Part B, and who have an IEP developed and implemented by their third birthday.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 12	Children referred by Part C	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI Compliance Monitoring

Indicator Data Note:

NA = Data not available as district was not monitored in the year in which data is being reported.

District performance for this indicator is only for districts monitored in the year in which data is being reported. The OPI reviews a sample of student records as part of its compliance monitoring activities to determine if children referred by a Part C Service Provider Agency have an IEP in place at the age of three. A review of student records is to identify noncompliance issues with respect to 34 CFR 300.111 Child Find or 34 CFR 300.124 Transition of children from the Part C program to preschool programs.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0534 Trego Elem

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0534 Trego Elem

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0534 Trego Elem

INDICATOR #3 - Statewide Assessments

Participation and performance of children with disabilities on statewide assessments:

3A. Has District met the state's AYP objectives for progress for disability subgroup?

3B. Participation rate for children with IEPs in statewide assessments.

3C. Proficiency rate for children with IEPs against grade-level standards and alternate achievement standards.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 3A	Assessment -- Meeting AYP Objectives	*	*	*	*	*	*	*
Indicator 3B	Assessment -- Participation Rates	16	12	0.75 (75%)	0.4677	0.91109	0.98 (98%)	Not Met
Indicator 3C	Assessment -- Proficiency Rates	*	*	*	*	*	*	*

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0534 Trego Elem

INDICATOR #4 - Suspension and Expulsion Rates

Districts who have been identified as having a significant discrepancy in long-term suspension and expulsion rates.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 4A	Suspension and Expulsion Rates	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

OPI School Discipline Data Collection reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The assessment of a school district's performance based on long-term suspension and expulsion rates is done by comparing the suspension and expulsion rates for students with disabilities to the long-term suspension and expulsion rates for nondisabled students. Long-term suspension or expulsion is defined as a suspension or expulsion that results in removal of a student, out-of-school, for greater than 10 school days or a student with multiple short-term (10 school days or less) out-of-school suspensions or expulsions that sum to greater than 10 school days during the school year.

For each racial/ethnic group, a statistical test of the difference between proportions is conducted to determine if the size of difference between the school district's special education long-term suspension and expulsion rates and the long-term suspension and expulsion rates for regular education students in the school district is statistically significant. In our comparison of long-term suspension and expulsion rates, we have set a .05 level of significance. This means, we are 95 percent confident that the differences between the rates are real (significant) and not due to random factors. However, the precision and reliability of this method is dependent upon having a large enough sample size to be representative of the school district's population and so, we also employ a minimum sample size (minimum N) of 10.

If the difference between the long-term suspension and expulsion rates for students with disabilities and the rates for nondisabled students by race/ethnicity group is statistically significant for a specific school district, the school district is flagged for additional investigation to determine if a significant discrepancy is occurring in the rates of long-term suspensions and expulsions of students with disabilities in a school year. This includes validation of the school district's long-term suspension and expulsion data and a systematic review of complaints/mediation/due process information, compliance monitoring and program data.

For School Year: 2005-2006

District Name 0534 Trego Elem

INDICATOR #5 - Education Environment Rates

Percent of children with IEPs, aged 6-21,

5A. Removed from the regular class less than 21% of the school day.

5B. Removed from regular class greater than 60% of the day; or

5C. Served in public or private separate schools, residential placements, or homebound or hospital placements.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 5A	Education Environment Rate -- Reg Class > 80% of day	*	*	*	*	*	*	*
Indicator 5B	Education Environment Rate -- Reg Class < 40% of day	*	*	*	*	*	*	*
Indicator 5C	Education Environment Rate -- Sep Schls	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0534 Trego Elem

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0534 Trego Elem

INDICATOR #12 - Children Referred By Part C

Percent of children referred by Part C, prior to age 3, who are found eligible for Part B, and who have an IEP developed and implemented by their third birthday.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 12	Children referred by Part C	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI Compliance Monitoring

Indicator Data Note:

NA = Data not available as district was not monitored in the year in which data is being reported.

District performance for this indicator is only for districts monitored in the year in which data is being reported. The OPI reviews a sample of student records as part of its compliance monitoring activities to determine if children referred by a Part C Service Provider Agency have an IEP in place at the age of three. A review of student records is to identify noncompliance issues with respect to 34 CFR 300.111 Child Find or 34 CFR 300.124 Transition of children from the Part C program to preschool programs.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0491 Trinity Elem

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0491 Trinity Elem

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0491 Trinity Elem

INDICATOR #3 - Statewide Assessments

Participation and performance of children with disabilities on statewide assessments:

3A. Has District met the state's AYP objectives for progress for disability subgroup?

3B. Participation rate for children with IEPs in statewide assessments.

3C. Proficiency rate for children with IEPs against grade-level standards and alternate achievement standards.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 3A	Assessment -- Meeting AYP Objectives	*	*	*	*	*	*	*
Indicator 3B	Assessment -- Participation Rates	*	*	*	*	*	*	*
Indicator 3C	Assessment -- Proficiency Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0491 Trinity Elem

INDICATOR #4 - Suspension and Expulsion Rates

Districts who have been identified as having a significant discrepancy in long-term suspension and expulsion rates.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 4A	Suspension and Expulsion Rates	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

OPI School Discipline Data Collection reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The assessment of a school district's performance based on long-term suspension and expulsion rates is done by comparing the suspension and expulsion rates for students with disabilities to the long-term suspension and expulsion rates for nondisabled students. Long-term suspension or expulsion is defined as a suspension or expulsion that results in removal of a student, out-of-school, for greater than 10 school days or a student with multiple short-term (10 school days or less) out-of-school suspensions or expulsions that sum to greater than 10 school days during the school year.

For each racial/ethnic group, a statistical test of the difference between proportions is conducted to determine if the size of difference between the school district's special education long-term suspension and expulsion rates and the long-term suspension and expulsion rates for regular education students in the school district is statistically significant. In our comparison of long-term suspension and expulsion rates, we have set a .05 level of significance. This means, we are 95 percent confident that the differences between the rates are real (significant) and not due to random factors. However, the precision and reliability of this method is dependent upon having a large enough sample size to be representative of the school district's population and so, we also employ a minimum sample size (minimum N) of 10.

If the difference between the long-term suspension and expulsion rates for students with disabilities and the rates for nondisabled students by race/ethnicity group is statistically significant for a specific school district, the school district is flagged for additional investigation to determine if a significant discrepancy is occurring in the rates of long-term suspensions and expulsions of students with disabilities in a school year. This includes validation of the school district's long-term suspension and expulsion data and a systematic review of complaints/mediation/due process information, compliance monitoring and program data.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0491 Trinity Elem

INDICATOR #5 - Education Environment Rates

Percent of children with IEPs, aged 6-21,

5A. Removed from the regular class less than 21% of the school day.

5B. Removed from regular class greater than 60% of the day; or

5C. Served in public or private separate schools, residential placements, or homebound or hospital placements.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 5A	Education Environment Rate -- Reg Class > 80% of day	*	*	*	*	*	*	*
Indicator 5B	Education Environment Rate -- Reg Class < 40% of day	*	*	*	*	*	*	*
Indicator 5C	Education Environment Rate -- Sep Schls	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0491 Trinity Elem

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

Indicator Data Source:

OPI Compliance Monitoring

Indicator Data Note:

NA = Data not available as district was not monitored in the year in which data is being reported.

District performance for this indicator is only for districts monitored in the year in which data is being reported. The OPI reviews a sample of student records as part of its compliance monitoring activities to determine if children referred by a Part C Service Provider Agency have an IEP in place at the age of three. A review of student records is to identify noncompliance issues with respect to 34 CFR 300.111 Child Find or 34 CFR 300.124 Transition of children from the Part C program to preschool programs.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0807 Trout Creek Elem

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0807 Trout Creek Elem

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0807 Trout Creek Elem

INDICATOR #3 - Statewide Assessments

Participation and performance of children with disabilities on statewide assessments:

3A. Has District met the state's AYP objectives for progress for disability subgroup?

3B. Participation rate for children with IEPs in statewide assessments.

3C. Proficiency rate for children with IEPs against grade-level standards and alternate achievement standards.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 3A	Assessment -- Meeting AYP Objectives	*	*	*	*	*	*	*
Indicator 3B	Assessment -- Participation Rates	*	*	*	*	*	*	*
Indicator 3C	Assessment -- Proficiency Rates	*	*	*	*	*	*	*

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0807 Trout Creek Elem

INDICATOR #4 - Suspension and Expulsion Rates

Districts who have been identified as having a significant discrepancy in long-term suspension and expulsion rates.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 4A	Suspension and Expulsion Rates	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

OPI School Discipline Data Collection reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The assessment of a school district's performance based on long-term suspension and expulsion rates is done by comparing the suspension and expulsion rates for students with disabilities to the long-term suspension and expulsion rates for nondisabled students. Long-term suspension or expulsion is defined as a suspension or expulsion that results in removal of a student, out-of-school, for greater than 10 school days or a student with multiple short-term (10 school days or less) out-of-school suspensions or expulsions that sum to greater than 10 school days during the school year.

For each racial/ethnic group, a statistical test of the difference between proportions is conducted to determine if the size of difference between the school district's special education long-term suspension and expulsion rates and the long-term suspension and expulsion rates for regular education students in the school district is statistically significant. In our comparison of long-term suspension and expulsion rates, we have set a .05 level of significance. This means, we are 95 percent confident that the differences between the rates are real (significant) and not due to random factors. However, the precision and reliability of this method is dependent upon having a large enough sample size to be representative of the school district's population and so, we also employ a minimum sample size (minimum N) of 10.

If the difference between the long-term suspension and expulsion rates for students with disabilities and the rates for nondisabled students by race/ethnicity group is statistically significant for a specific school district, the school district is flagged for additional investigation to determine if a significant discrepancy is occurring in the rates of long-term suspensions and expulsions of students with disabilities in a school year. This includes validation of the school district's long-term suspension and expulsion data and a systematic review of complaints/mediation/due process information, compliance monitoring and program data.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0807 Trout Creek Elem

INDICATOR #5 - Education Environment Rates

Percent of children with IEPs, aged 6-21,

5A. Removed from the regular class less than 21% of the school day.

5B. Removed from regular class greater than 60% of the day; or

5C. Served in public or private separate schools, residential placements, or homebound or hospital placements.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 5A	Education Environment Rate -- Reg Class > 80% of day	10	7	0.7 (70%)	0.34729	0.911	0.5 (50%)	Met
Indicator 5B	Education Environment Rate -- Reg Class < 40% of day	10	0	0 (0%)	0	0	0.12 (12%)	Met
Indicator 5C	Education Environment Rate -- Sep Schls	10	1	0.1 (10%)	0.00239	0.83231	0.018 (1.8%)	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0807 Trout Creek Elem

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0807 Trout Creek Elem

INDICATOR #12 - Children Referred By Part C

Percent of children referred by Part C, prior to age 3, who are found eligible for Part B, and who have an IEP developed and implemented by their third birthday.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 12	Children referred by Part C	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI Compliance Monitoring

Indicator Data Note:

NA = Data not available as district was not monitored in the year in which data is being reported.

District performance for this indicator is only for districts monitored in the year in which data is being reported. The OPI reviews a sample of student records as part of its compliance monitoring activities to determine if children referred by a Part C Service Provider Agency have an IEP in place at the age of three. A review of student records is to identify noncompliance issues with respect to 34 CFR 300.111 Child Find or 34 CFR 300.124 Transition of children from the Part C program to preschool programs.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0519 Troy Elem

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

0519 Troy Elem

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

INDICATOR #3 - Statewide Assessments

Participation and performance of children with disabilities on statewide assessments:

3A. Has District met the state's AYP objectives for progress for disability subgroup?

3B. Participation rate for children with IEPs in statewide assessments.

3C. Proficiency rate for children with IEPs against grade-level standards and alternate achievement standards.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 3A	Assessment -- Meeting AYP Objectives	*	*	*	*	*	*	*
Indicator 3B	Assessment -- Participation Rates	30	30	1 (100%)	0.88651	1.00001	0.98 (98%)	Met
Indicator 3C	Assessment -- Proficiency Rates	*	*	*	*	*	*	*

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0519 Troy Elem

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0519 Troy Elem

INDICATOR #12 - Children Referred By Part C

Percent of children referred by Part C, prior to age 3, who are found eligible for Part B, and who have an IEP developed and implemented by their third birthday.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 12	Children referred by Part C	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI Compliance Monitoring

Indicator Data Note:

NA = Data not available as district was not monitored in the year in which data is being reported.

District performance for this indicator is only for districts monitored in the year in which data is being reported. The OPI reviews a sample of student records as part of its compliance monitoring activities to determine if children referred by a Part C Service Provider Agency have an IEP in place at the age of three. A review of student records is to identify noncompliance issues with respect to 34 CFR 300.111 Child Find or 34 CFR 300.124 Transition of children from the Part C program to preschool programs.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

0520 Troy H S

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

0520 Troy H S

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	16	2	0.12 (12%)	0.00719	0.73595	0.058 (5.8%)	Met

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

0520 Troy H S

INDICATOR #3 - Statewide Assessments

Participation and performance of children with disabilities on statewide assessments:

3A. Has District met the state's AYP objectives for progress for disability subgroup?

3B. Participation rate for children with IEPs in statewide assessments.

3C. Proficiency rate for children with IEPs against grade-level standards and alternate achievement standards.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 3A	Assessment -- Meeting AYP Objectives	*	*	*	*	*	*	*
Indicator 3B	Assessment -- Participation Rates	*	*	*	*	*	*	*
Indicator 3C	Assessment -- Proficiency Rates	*	*	*	*	*	*	*

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

0520 Troy H S

INDICATOR #4 - Suspension and Expulsion Rates

Districts who have been identified as having a significant discrepancy in long-term suspension and expulsion rates.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 4A	Suspension and Expulsion Rates	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

OPI School Discipline Data Collection reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The assessment of a school district's performance based on long-term suspension and expulsion rates is done by comparing the suspension and expulsion rates for students with disabilities to the long-term suspension and expulsion rates for nondisabled students. Long-term suspension or expulsion is defined as a suspension or expulsion that results in removal of a student, out-of-school, for greater than 10 school days or a student with multiple short-term (10 school days or less) out-of-school suspensions or expulsions that sum to greater than 10 school days during the school year.

For each racial/ethnic group, a statistical test of the difference between proportions is conducted to determine if the size of difference between the school district's special education long-term suspension and expulsion rates and the long-term suspension and expulsion rates for regular education students in the school district is statistically significant. In our comparison of long-term suspension and expulsion rates, we have set a .05 level of significance. This means, we are 95 percent confident that the differences between the rates are real (significant) and not due to random factors. However, the precision and reliability of this method is dependent upon having a large enough sample size to be representative of the school district's population and so, we also employ a minimum sample size (minimum N) of 10.

If the difference between the long-term suspension and expulsion rates for students with disabilities and the rates for nondisabled students by race/ethnicity group is statistically significant for a specific school district, the school district is flagged for additional investigation to determine if a significant discrepancy is occurring in the rates of long-term suspensions and expulsions of students with disabilities in a school year. This includes validation of the school district's long-term suspension and expulsion data and a systematic review of complaints/mediation/due process information, compliance monitoring and program data.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

0520 Troy H S

INDICATOR #5 - Education Environment Rates

Percent of children with IEPs, aged 6-21,

5A. Removed from the regular class less than 21% of the school day.

5B. Removed from regular class greater than 60% of the day; or

5C. Served in public or private separate schools, residential placements, or homebound or hospital placements.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 5A	Education Environment Rate -- Reg Class > 80% of day	16	0	0 (0%)	0	0	0.5 (50%)	Not Met
Indicator 5B	Education Environment Rate -- Reg Class < 40% of day	16	2	0.12 (12%)	0.00719	0.73595	0.12 (12%)	Met
Indicator 5C	Education Environment Rate -- Sep Schls	16	0	0 (0%)	0	0	0.018 (1.8%)	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

0520 Troy H S

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

Indicator Data Source:

OPI Compliance Monitoring

Indicator Data Note:

NA = Data not available as district was not monitored in the year in which data is being reported.

District performance for this indicator is only for districts monitored in the year in which data is being reported. The OPI reviews a sample of student records as part of its compliance monitoring activities to determine if children referred by a Part C Service Provider Agency have an IEP in place at the age of three. A review of student records is to identify noncompliance issues with respect to 34 CFR 300.111 Child Find or 34 CFR 300.124 Transition of children from the Part C program to preschool programs.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0044 Turner Elem

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

0044 Turner Elem

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

0044 Turner Elem

INDICATOR #3 - Statewide Assessments

Participation and performance of children with disabilities on statewide assessments:

3A. Has District met the state's AYP objectives for progress for disability subgroup?

3B. Participation rate for children with IEPs in statewide assessments.

3C. Proficiency rate for children with IEPs against grade-level standards and alternate achievement standards.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 3A	Assessment -- Meeting AYP Objectives	*	*	*	*	*	*	*
Indicator 3B	Assessment -- Participation Rates	18	18	1 (100%)	0.82416	1.00002	0.98 (98%)	Met
Indicator 3C	Assessment -- Proficiency Rates	*	*	*	*	*	*	*

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0044 Turner Elem

INDICATOR #4 - Suspension and Expulsion Rates

Districts who have been identified as having a significant discrepancy in long-term suspension and expulsion rates.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 4A	Suspension and Expulsion Rates	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

OPI School Discipline Data Collection reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The assessment of a school district's performance based on long-term suspension and expulsion rates is done by comparing the suspension and expulsion rates for students with disabilities to the long-term suspension and expulsion rates for nondisabled students. Long-term suspension or expulsion is defined as a suspension or expulsion that results in removal of a student, out-of-school, for greater than 10 school days or a student with multiple short-term (10 school days or less) out-of-school suspensions or expulsions that sum to greater than 10 school days during the school year.

For each racial/ethnic group, a statistical test of the difference between proportions is conducted to determine if the size of difference between the school district's special education long-term suspension and expulsion rates and the long-term suspension and expulsion rates for regular education students in the school district is statistically significant. In our comparison of long-term suspension and expulsion rates, we have set a .05 level of significance. This means, we are 95 percent confident that the differences between the rates are real (significant) and not due to random factors. However, the precision and reliability of this method is dependent upon having a large enough sample size to be representative of the school district's population and so, we also employ a minimum sample size (minimum N) of 10.

If the difference between the long-term suspension and expulsion rates for students with disabilities and the rates for nondisabled students by race/ethnicity group is statistically significant for a specific school district, the school district is flagged for additional investigation to determine if a significant discrepancy is occurring in the rates of long-term suspensions and expulsions of students with disabilities in a school year. This includes validation of the school district's long-term suspension and expulsion data and a systematic review of complaints/mediation/due process information, compliance monitoring and program data.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

0044 Turner Elem

INDICATOR #5 - Education Environment Rates

Percent of children with IEPs, aged 6-21,

5A. Removed from the regular class less than 21% of the school day.

5B. Removed from regular class greater than 60% of the day; or

5C. Served in public or private separate schools, residential placements, or homebound or hospital placements.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 5A	Education Environment Rate -- Reg Class > 80% of day	*	*	*	*	*	*	*
Indicator 5B	Education Environment Rate -- Reg Class < 40% of day	*	*	*	*	*	*	*
Indicator 5C	Education Environment Rate -- Sep Schls	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0044 Turner Elem

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0044 Turner Elem

INDICATOR #12 - Children Referred By Part C

Percent of children referred by Part C, prior to age 3, who are found eligible for Part B, and who have an IEP developed and implemented by their third birthday.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 12	Children referred by Part C	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI Compliance Monitoring

Indicator Data Note:

NA = Data not available as district was not monitored in the year in which data is being reported.

District performance for this indicator is only for districts monitored in the year in which data is being reported. The OPI reviews a sample of student records as part of its compliance monitoring activities to determine if children referred by a Part C Service Provider Agency have an IEP in place at the age of three. A review of student records is to identify noncompliance issues with respect to 34 CFR 300.111 Child Find or 34 CFR 300.124 Transition of children from the Part C program to preschool programs.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

0045 Turner H S

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

0045 Turner H S

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

0045 Turner H S

INDICATOR #3 - Statewide Assessments

Participation and performance of children with disabilities on statewide assessments:

3A. Has District met the state's AYP objectives for progress for disability subgroup?

3B. Participation rate for children with IEPs in statewide assessments.

3C. Proficiency rate for children with IEPs against grade-level standards and alternate achievement standards.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 3A	Assessment -- Meeting AYP Objectives	*	*	*	*	*	*	*
Indicator 3B	Assessment -- Participation Rates	*	*	*	*	*	*	*
Indicator 3C	Assessment -- Proficiency Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

0045 Turner H S

INDICATOR #4 - Suspension and Expulsion Rates

Districts who have been identified as having a significant discrepancy in long-term suspension and expulsion rates.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 4A	Suspension and Expulsion Rates	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

OPI School Discipline Data Collection reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The assessment of a school district's performance based on long-term suspension and expulsion rates is done by comparing the suspension and expulsion rates for students with disabilities to the long-term suspension and expulsion rates for nondisabled students. Long-term suspension or expulsion is defined as a suspension or expulsion that results in removal of a student, out-of-school, for greater than 10 school days or a student with multiple short-term (10 school days or less) out-of-school suspensions or expulsions that sum to greater than 10 school days during the school year.

For each racial/ethnic group, a statistical test of the difference between proportions is conducted to determine if the size of difference between the school district's special education long-term suspension and expulsion rates and the long-term suspension and expulsion rates for regular education students in the school district is statistically significant. In our comparison of long-term suspension and expulsion rates, we have set a .05 level of significance. This means, we are 95 percent confident that the differences between the rates are real (significant) and not due to random factors. However, the precision and reliability of this method is dependent upon having a large enough sample size to be representative of the school district's population and so, we also employ a minimum sample size (minimum N) of 10.

If the difference between the long-term suspension and expulsion rates for students with disabilities and the rates for nondisabled students by race/ethnicity group is statistically significant for a specific school district, the school district is flagged for additional investigation to determine if a significant discrepancy is occurring in the rates of long-term suspensions and expulsions of students with disabilities in a school year. This includes validation of the school district's long-term suspension and expulsion data and a systematic review of complaints/mediation/due process information, compliance monitoring and program data.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

0045 Turner H S

INDICATOR #5 - Education Environment Rates

Percent of children with IEPs, aged 6-21,

5A. Removed from the regular class less than 21% of the school day.

5B. Removed from regular class greater than 60% of the day; or

5C. Served in public or private separate schools, residential placements, or homebound or hospital placements.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 5A	Education Environment Rate -- Reg Class > 80% of day	*	*	*	*	*	*	*
Indicator 5B	Education Environment Rate -- Reg Class < 40% of day	*	*	*	*	*	*	*
Indicator 5C	Education Environment Rate -- Sep Schls	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

0045 Turner H S

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0045 Turner H S

INDICATOR #12 - Children Referred By Part C

Percent of children referred by Part C, prior to age 3, who are found eligible for Part B, and who have an IEP developed and implemented by their third birthday.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 12	Children referred by Part C	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI Compliance Monitoring

Indicator Data Note:

NA = Data not available as district was not monitored in the year in which data is being reported.

District performance for this indicator is only for districts monitored in the year in which data is being reported. The OPI reviews a sample of student records as part of its compliance monitoring activities to determine if children referred by a Part C Service Provider Agency have an IEP in place at the age of three. A review of student records is to identify noncompliance issues with respect to 34 CFR 300.111 Child Find or 34 CFR 300.124 Transition of children from the Part C program to preschool programs.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0540 Twin Bridges K-12 Schools

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0540 Twin Bridges K-12 Schools

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0540 Twin Bridges K-12 Schools

INDICATOR #3 - Statewide Assessments

Participation and performance of children with disabilities on statewide assessments:

3A. Has District met the state's AYP objectives for progress for disability subgroup?

3B. Participation rate for children with IEPs in statewide assessments.

3C. Proficiency rate for children with IEPs against grade-level standards and alternate achievement standards.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 3A	Assessment -- Meeting AYP Objectives	*	*	*	*	*	*	*
Indicator 3B	Assessment -- Participation Rates	30	34	1 (100%)	0.89851	1.00001	0.98 (98%)	Met
Indicator 3C	Assessment -- Proficiency Rates	30	14	0.47 (47%)	0.24222	0.70546	0.295 (29.5%)	Met

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0540 Twin Bridges K-12 Schools

INDICATOR #4 - Suspension and Expulsion Rates

Districts who have been identified as having a significant discrepancy in long-term suspension and expulsion rates.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 4A	Suspension and Expulsion Rates	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

OPI School Discipline Data Collection reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The assessment of a school district's performance based on long-term suspension and expulsion rates is done by comparing the suspension and expulsion rates for students with disabilities to the long-term suspension and expulsion rates for nondisabled students. Long-term suspension or expulsion is defined as a suspension or expulsion that results in removal of a student, out-of-school, for greater than 10 school days or a student with multiple short-term (10 school days or less) out-of-school suspensions or expulsions that sum to greater than 10 school days during the school year.

For each racial/ethnic group, a statistical test of the difference between proportions is conducted to determine if the size of difference between the school district's special education long-term suspension and expulsion rates and the long-term suspension and expulsion rates for regular education students in the school district is statistically significant. In our comparison of long-term suspension and expulsion rates, we have set a .05 level of significance. This means, we are 95 percent confident that the differences between the rates are real (significant) and not due to random factors. However, the precision and reliability of this method is dependent upon having a large enough sample size to be representative of the school district's population and so, we also employ a minimum sample size (minimum N) of 10.

If the difference between the long-term suspension and expulsion rates for students with disabilities and the rates for nondisabled students by race/ethnicity group is statistically significant for a specific school district, the school district is flagged for additional investigation to determine if a significant discrepancy is occurring in the rates of long-term suspensions and expulsions of students with disabilities in a school year. This includes validation of the school district's long-term suspension and expulsion data and a systematic review of complaints/mediation/due process information, compliance monitoring and program data.

INDICATOR #5 - Education Environment Rates

Percent of children with IEPs, aged 6-21,

5A. Removed from the regular class less than 21% of the school day.

5B. Removed from regular class greater than 60% of the day; or

5C. Served in public or private separate schools, residential placements, or homebound or hospital placements.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 5A	Education Environment Rate -- Reg Class > 80% of day	29	25	0.86 (86%)	0.67908	0.94863	0.5 (50%)	Met
Indicator 5B	Education Environment Rate -- Reg Class < 40% of day	29	2	0.07 (7%)	0.00224	0.70252	0.12 (12%)	Met
Indicator 5C	Education Environment Rate -- Sep Schls	29	0	0 (0%)	0	0	0.018 (1.8%)	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0540 Twin Bridges K-12 Schools

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

INDICATOR #12 - Children Referred By Part C

Percent of children referred by Part C, prior to age 3, who are found eligible for Part B, and who have an IEP developed and implemented by their third birthday.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 12	Children referred by Part C	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI Compliance Monitoring

Indicator Data Note:

NA = Data not available as district was not monitored in the year in which data is being reported.

District performance for this indicator is only for districts monitored in the year in which data is being reported. The OPI reviews a sample of student records as part of its compliance monitoring activities to determine if children referred by a Part C Service Provider Agency have an IEP in place at the age of three. A review of student records is to identify noncompliance issues with respect to 34 CFR 300.111 Child Find or 34 CFR 300.124 Transition of children from the Part C program to preschool programs.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 1232 Twin Buttes Elem

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 1232 Twin Buttes Elem

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 1232 Twin Buttes Elem

INDICATOR #3 - Statewide Assessments

Participation and performance of children with disabilities on statewide assessments:

3A. Has District met the state's AYP objectives for progress for disability subgroup?

3B. Participation rate for children with IEPs in statewide assessments.

3C. Proficiency rate for children with IEPs against grade-level standards and alternate achievement standards.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 3A	Assessment -- Meeting AYP Objectives	*	*	*	*	*	*	*
Indicator 3B	Assessment -- Participation Rates	*	*	*	*	*	*	*
Indicator 3C	Assessment -- Proficiency Rates	*	*	*	*	*	*	*

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 1232 Twin Buttes Elem

INDICATOR #4 - Suspension and Expulsion Rates

Districts who have been identified as having a significant discrepancy in long-term suspension and expulsion rates.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 4A	Suspension and Expulsion Rates	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

OPI School Discipline Data Collection reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The assessment of a school district's performance based on long-term suspension and expulsion rates is done by comparing the suspension and expulsion rates for students with disabilities to the long-term suspension and expulsion rates for nondisabled students. Long-term suspension or expulsion is defined as a suspension or expulsion that results in removal of a student, out-of-school, for greater than 10 school days or a student with multiple short-term (10 school days or less) out-of-school suspensions or expulsions that sum to greater than 10 school days during the school year.

For each racial/ethnic group, a statistical test of the difference between proportions is conducted to determine if the size of difference between the school district's special education long-term suspension and expulsion rates and the long-term suspension and expulsion rates for regular education students in the school district is statistically significant. In our comparison of long-term suspension and expulsion rates, we have set a .05 level of significance. This means, we are 95 percent confident that the differences between the rates are real (significant) and not due to random factors. However, the precision and reliability of this method is dependent upon having a large enough sample size to be representative of the school district's population and so, we also employ a minimum sample size (minimum N) of 10.

If the difference between the long-term suspension and expulsion rates for students with disabilities and the rates for nondisabled students by race/ethnicity group is statistically significant for a specific school district, the school district is flagged for additional investigation to determine if a significant discrepancy is occurring in the rates of long-term suspensions and expulsions of students with disabilities in a school year. This includes validation of the school district's long-term suspension and expulsion data and a systematic review of complaints/mediation/due process information, compliance monitoring and program data.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

1232 Twin Buttes Elem

INDICATOR #5 - Education Environment Rates

Percent of children with IEPs, aged 6-21,

5A. Removed from the regular class less than 21% of the school day.

5B. Removed from regular class greater than 60% of the day; or

5C. Served in public or private separate schools, residential placements, or homebound or hospital placements.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 5A	Education Environment Rate -- Reg Class > 80% of day	*	*	*	*	*	*	*
Indicator 5B	Education Environment Rate -- Reg Class < 40% of day	*	*	*	*	*	*	*
Indicator 5C	Education Environment Rate -- Sep Schls	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 1232 Twin Buttes Elem

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

OPI Compliance Monitoring

Indicator Data Note:

NA = Data not available as district was not monitored in the year in which data is being reported.

District performance for this indicator is only for districts monitored in the year in which data is being reported. The OPI reviews a sample of student records as part of its compliance monitoring activities to determine if children referred by a Part C Service Provider Agency have an IEP in place at the age of three. A review of student records is to identify noncompliance issues with respect to 34 CFR 300.111 Child Find or 34 CFR 300.124 Transition of children from the Part C program to preschool programs.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

0131 Ulm Elem

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

0131 Ulm Elem

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

INDICATOR #3 - Statewide Assessments

Participation and performance of children with disabilities on statewide assessments:

3A. Has District met the state's AYP objectives for progress for disability subgroup?

3B. Participation rate for children with IEPs in statewide assessments.

3C. Proficiency rate for children with IEPs against grade-level standards and alternate achievement standards.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 3A	Assessment -- Meeting AYP Objectives	*	*	*	*	*	*	*
Indicator 3B	Assessment -- Participation Rates	16	16	1 (100%)	0.80643	1.00002	0.98 (98%)	Met
Indicator 3C	Assessment -- Proficiency Rates	16	12	0.75 (75%)	0.4677	0.91109	0.295 (29.5%)	Met

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

0131 Ulm Elem

INDICATOR #4 - Suspension and Expulsion Rates

Districts who have been identified as having a significant discrepancy in long-term suspension and expulsion rates.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 4A	Suspension and Expulsion Rates	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

OPI School Discipline Data Collection reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The assessment of a school district's performance based on long-term suspension and expulsion rates is done by comparing the suspension and expulsion rates for students with disabilities to the long-term suspension and expulsion rates for nondisabled students. Long-term suspension or expulsion is defined as a suspension or expulsion that results in removal of a student, out-of-school, for greater than 10 school days or a student with multiple short-term (10 school days or less) out-of-school suspensions or expulsions that sum to greater than 10 school days during the school year.

For each racial/ethnic group, a statistical test of the difference between proportions is conducted to determine if the size of difference between the school district's special education long-term suspension and expulsion rates and the long-term suspension and expulsion rates for regular education students in the school district is statistically significant. In our comparison of long-term suspension and expulsion rates, we have set a .05 level of significance. This means, we are 95 percent confident that the differences between the rates are real (significant) and not due to random factors. However, the precision and reliability of this method is dependent upon having a large enough sample size to be representative of the school district's population and so, we also employ a minimum sample size (minimum N) of 10.

If the difference between the long-term suspension and expulsion rates for students with disabilities and the rates for nondisabled students by race/ethnicity group is statistically significant for a specific school district, the school district is flagged for additional investigation to determine if a significant discrepancy is occurring in the rates of long-term suspensions and expulsions of students with disabilities in a school year. This includes validation of the school district's long-term suspension and expulsion data and a systematic review of complaints/mediation/due process information, compliance monitoring and program data.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

0131 Ulm Elem

INDICATOR #5 - Education Environment Rates

Percent of children with IEPs, aged 6-21,

5A. Removed from the regular class less than 21% of the school day.

5B. Removed from regular class greater than 60% of the day; or

5C. Served in public or private separate schools, residential placements, or homebound or hospital placements.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 5A	Education Environment Rate -- Reg Class > 80% of day	*	*	*	*	*	*	*
Indicator 5B	Education Environment Rate -- Reg Class < 40% of day	*	*	*	*	*	*	*
Indicator 5C	Education Environment Rate -- Sep Schls	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

0131 Ulm Elem

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0131 Ulm Elem

INDICATOR #12 - Children Referred By Part C

Percent of children referred by Part C, prior to age 3, who are found eligible for Part B, and who have an IEP developed and implemented by their third birthday.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 12	Children referred by Part C	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI Compliance Monitoring

Indicator Data Note:

NA = Data not available as district was not monitored in the year in which data is being reported.

District performance for this indicator is only for districts monitored in the year in which data is being reported. The OPI reviews a sample of student records as part of its compliance monitoring activities to determine if children referred by a Part C Service Provider Agency have an IEP in place at the age of three. A review of student records is to identify noncompliance issues with respect to 34 CFR 300.111 Child Find or 34 CFR 300.124 Transition of children from the Part C program to preschool programs.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 1211 Upper West Shore Elem

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 1211 Upper West Shore Elem

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 1211 Upper West Shore Elem

INDICATOR #3 - Statewide Assessments

Participation and performance of children with disabilities on statewide assessments:

3A. Has District met the state's AYP objectives for progress for disability subgroup?

3B. Participation rate for children with IEPs in statewide assessments.

3C. Proficiency rate for children with IEPs against grade-level standards and alternate achievement standards.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 3A	Assessment -- Meeting AYP Objectives	NA	NA	NA	NA	NA	NA	NA
Indicator 3B	Assessment -- Participation Rates	NA	NA	NA	NA	NA	NA	NA
Indicator 3C	Assessment -- Proficiency Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

Indicator 5B	Education Environment Rate -- Reg Class < 40% of day	*	*	*	*	*	*	*
Indicator 5C	Education Environment Rate -- Sep Schls	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 1211 Upper West Shore Elem

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 1211 Upper West Shore Elem

INDICATOR #12 - Children Referred By Part C

Percent of children referred by Part C, prior to age 3, who are found eligible for Part B, and who have an IEP developed and implemented by their third birthday.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 12	Children referred by Part C	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI Compliance Monitoring

Indicator Data Note:

NA = Data not available as district was not monitored in the year in which data is being reported.

District performance for this indicator is only for districts monitored in the year in which data is being reported. The OPI reviews a sample of student records as part of its compliance monitoring activities to determine if children referred by a Part C Service Provider Agency have an IEP in place at the age of three. A review of student records is to identify noncompliance issues with respect to 34 CFR 300.111 Child Find or 34 CFR 300.124 Transition of children from the Part C program to preschool programs.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0679 Valier Elem

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0679 Valier Elem

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0679 Valier Elem

INDICATOR #3 - Statewide Assessments

Participation and performance of children with disabilities on statewide assessments:

3A. Has District met the state's AYP objectives for progress for disability subgroup?

3B. Participation rate for children with IEPs in statewide assessments.

3C. Proficiency rate for children with IEPs against grade-level standards and alternate achievement standards.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 3A	Assessment -- Meeting AYP Objectives	*	*	*	*	*	*	*
Indicator 3B	Assessment -- Participation Rates	*	*	*	*	*	*	*
Indicator 3C	Assessment -- Proficiency Rates	*	*	*	*	*	*	*

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0679 Valier Elem

INDICATOR #4 - Suspension and Expulsion Rates

Districts who have been identified as having a significant discrepancy in long-term suspension and expulsion rates.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 4A	Suspension and Expulsion Rates	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

OPI School Discipline Data Collection reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The assessment of a school district's performance based on long-term suspension and expulsion rates is done by comparing the suspension and expulsion rates for students with disabilities to the long-term suspension and expulsion rates for nondisabled students. Long-term suspension or expulsion is defined as a suspension or expulsion that results in removal of a student, out-of-school, for greater than 10 school days or a student with multiple short-term (10 school days or less) out-of-school suspensions or expulsions that sum to greater than 10 school days during the school year.

For each racial/ethnic group, a statistical test of the difference between proportions is conducted to determine if the size of difference between the school district's special education long-term suspension and expulsion rates and the long-term suspension and expulsion rates for regular education students in the school district is statistically significant. In our comparison of long-term suspension and expulsion rates, we have set a .05 level of significance. This means, we are 95 percent confident that the differences between the rates are real (significant) and not due to random factors. However, the precision and reliability of this method is dependent upon having a large enough sample size to be representative of the school district's population and so, we also employ a minimum sample size (minimum N) of 10.

If the difference between the long-term suspension and expulsion rates for students with disabilities and the rates for nondisabled students by race/ethnicity group is statistically significant for a specific school district, the school district is flagged for additional investigation to determine if a significant discrepancy is occurring in the rates of long-term suspensions and expulsions of students with disabilities in a school year. This includes validation of the school district's long-term suspension and expulsion data and a systematic review of complaints/mediation/due process information, compliance monitoring and program data.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0679 Valier Elem

INDICATOR #5 - Education Environment Rates

Percent of children with IEPs, aged 6-21,

5A. Removed from the regular class less than 21% of the school day.

5B. Removed from regular class greater than 60% of the day; or

5C. Served in public or private separate schools, residential placements, or homebound or hospital placements.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 5A	Education Environment Rate -- Reg Class > 80% of day	*	*	*	*	*	*	*
Indicator 5B	Education Environment Rate -- Reg Class < 40% of day	*	*	*	*	*	*	*
Indicator 5C	Education Environment Rate -- Sep Schls	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0679 Valier Elem

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

Indicator Data Note:

NA = Data not available as district was not monitored in the year in which data is being reported.

District performance for this indicator is only for districts monitored in the year in which data is being reported. The OPI reviews a sample of student records as part of its compliance monitoring activities to determine if children referred by a Part C Service Provider Agency have an IEP in place at the age of three. A review of student records is to identify noncompliance issues with respect to 34 CFR 300.111 Child Find or 34 CFR 300.124 Transition of children from the Part C program to preschool programs.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0680 Valier H S

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

0680 Valier H S

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

Participation and performance of children with disabilities on statewide assessments:

3A. Has District met the state's AYP objectives for progress for disability subgroup?

3B. Participation rate for children with IEPs in statewide assessments.

3C. Proficiency rate for children with IEPs against grade-level standards and alternate achievement standards.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 3A	Assessment -- Meeting AYP Objectives	*	*	*	*	*	*	*
Indicator 3B	Assessment -- Participation Rates	NA	NA	NA	NA	NA	NA	NA
Indicator 3C	Assessment -- Proficiency Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

0680 Valier H S

INDICATOR #4 - Suspension and Expulsion Rates

Districts who have been identified as having a significant discrepancy in long-term suspension and expulsion rates.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 4A	Suspension and Expulsion Rates	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

OPI School Discipline Data Collection reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The assessment of a school district's performance based on long-term suspension and expulsion rates is done by comparing the suspension and expulsion rates for students with disabilities to the long-term suspension and expulsion rates for nondisabled students. Long-term suspension or expulsion is defined as a suspension or expulsion that results in removal of a student, out-of-school, for greater than 10 school days or a student with multiple short-term (10 school days or less) out-of-school suspensions or expulsions that sum to greater than 10 school days during the school year.

For each racial/ethnic group, a statistical test of the difference between proportions is conducted to determine if the size of difference between the school district's special education long-term suspension and expulsion rates and the long-term suspension and expulsion rates for regular education students in the school district is statistically significant. In our comparison of long-term suspension and expulsion rates, we have set a .05 level of significance. This means, we are 95 percent confident that the differences between the rates are real (significant) and not due to random factors. However, the precision and reliability of this method is dependent upon having a large enough sample size to be representative of the school district's population and so, we also employ a minimum sample size (minimum N) of 10.

If the difference between the long-term suspension and expulsion rates for students with disabilities and the rates for nondisabled students by race/ethnicity group is statistically significant for a specific school district, the school district is flagged for additional investigation to determine if a significant discrepancy is occurring in the rates of long-term suspensions and expulsions of students with disabilities in a school year. This includes validation of the school district's long-term suspension and expulsion data and a systematic review of complaints/mediation/due process information, compliance monitoring and program data.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

0680 Valier H S

INDICATOR #5 - Education Environment Rates

Percent of children with IEPs, aged 6-21,

5A. Removed from the regular class less than 21% of the school day.

5B. Removed from regular class greater than 60% of the day; or

5C. Served in public or private separate schools, residential placements, or homebound or hospital placements.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 5A	Education Environment Rate -- Reg Class > 80% of day	*	*	*	*	*	*	*
Indicator 5B	Education Environment Rate -- Reg Class < 40% of day	*	*	*	*	*	*	*
Indicator 5C	Education Environment Rate -- Sep Schls	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

0680 Valier H S

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0680 Valier H S

INDICATOR #12 - Children Referred By Part C

Percent of children referred by Part C, prior to age 3, who are found eligible for Part B, and who have an IEP developed and implemented by their third birthday.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 12	Children referred by Part C	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI Compliance Monitoring

Indicator Data Note:

NA = Data not available as district was not monitored in the year in which data is being reported.

District performance for this indicator is only for districts monitored in the year in which data is being reported. The OPI reviews a sample of student records as part of its compliance monitoring activities to determine if children referred by a Part C Service Provider Agency have an IEP in place at the age of three. A review of student records is to identify noncompliance issues with respect to 34 CFR 300.111 Child Find or 34 CFR 300.124 Transition of children from the Part C program to preschool programs.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0483 Valley View Elem

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0483 Valley View Elem

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

INDICATOR #3 - Statewide Assessments

Participation and performance of children with disabilities on statewide assessments:

3A. Has District met the state's AYP objectives for progress for disability subgroup?

3B. Participation rate for children with IEPs in statewide assessments.

3C. Proficiency rate for children with IEPs against grade-level standards and alternate achievement standards.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 3A	Assessment -- Meeting AYP Objectives	NA	NA	NA	NA	NA	NA	NA
Indicator 3B	Assessment -- Participation Rates	NA	NA	NA	NA	NA	NA	NA
Indicator 3C	Assessment -- Proficiency Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0483 Valley View Elem

INDICATOR #4 - Suspension and Expulsion Rates

Districts who have been identified as having a significant discrepancy in long-term suspension and expulsion rates.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 4A	Suspension and Expulsion Rates	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

OPI School Discipline Data Collection reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The assessment of a school district's performance based on long-term suspension and expulsion rates is done by comparing the suspension and expulsion rates for students with disabilities to the long-term suspension and expulsion rates for nondisabled students. Long-term suspension or expulsion is defined as a suspension or expulsion that results in removal of a student, out-of-school, for greater than 10 school days or a student with multiple short-term (10 school days or less) out-of-school suspensions or expulsions that sum to greater than 10 school days during the school year.

For each racial/ethnic group, a statistical test of the difference between proportions is conducted to determine if the size of difference between the school district's special education long-term suspension and expulsion rates and the long-term suspension and expulsion rates for regular education students in the school district is statistically significant. In our comparison of long-term suspension and expulsion rates, we have set a .05 level of significance. This means, we are 95 percent confident that the differences between the rates are real (significant) and not due to random factors. However, the precision and reliability of this method is dependent upon having a large enough sample size to be representative of the school district's population and so, we also employ a minimum sample size (minimum N) of 10.

If the difference between the long-term suspension and expulsion rates for students with disabilities and the rates for nondisabled students by race/ethnicity group is statistically significant for a specific school district, the school district is flagged for additional investigation to determine if a significant discrepancy is occurring in the rates of long-term suspensions and expulsions of students with disabilities in a school year. This includes validation of the school district's long-term suspension and expulsion data and a systematic review of complaints/mediation/due process information, compliance monitoring and program data.

INDICATOR #5 - Education Environment Rates

Percent of children with IEPs, aged 6-21,

5A. Removed from the regular class less than 21% of the school day.

5B. Removed from regular class greater than 60% of the day; or

5C. Served in public or private separate schools, residential placements, or homebound or hospital placements.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 5A	Education Environment Rate -- Reg Class > 80% of day	*	*	*	*	*	*	*
Indicator 5B	Education Environment Rate -- Reg Class < 40% of day	*	*	*	*	*	*	*
Indicator 5C	Education Environment Rate -- Sep Schls	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0483 Valley View Elem

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0483 Valley View Elem

INDICATOR #12 - Children Referred By Part C

Percent of children referred by Part C, prior to age 3, who are found eligible for Part B, and who have an IEP developed and implemented by their third birthday.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 12	Children referred by Part C	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI Compliance Monitoring

Indicator Data Note:

NA = Data not available as district was not monitored in the year in which data is being reported.

District performance for this indicator is only for districts monitored in the year in which data is being reported. The OPI reviews a sample of student records as part of its compliance monitoring activities to determine if children referred by a Part C Service Provider Agency have an IEP in place at the age of three. A review of student records is to identify noncompliance issues with respect to 34 CFR 300.111 Child Find or 34 CFR 300.124 Transition of children from the Part C program to preschool programs.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0382 Van Norman Elem

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0382 Van Norman Elem

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0382 Van Norman Elem

INDICATOR #3 - Statewide Assessments

Participation and performance of children with disabilities on statewide assessments:

3A. Has District met the state's AYP objectives for progress for disability subgroup?

3B. Participation rate for children with IEPs in statewide assessments.

3C. Proficiency rate for children with IEPs against grade-level standards and alternate achievement standards.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 3A	Assessment -- Meeting AYP Objectives	NA	NA	NA	NA	NA	NA	NA
Indicator 3B	Assessment -- Participation Rates	NA	NA	NA	NA	NA	NA	NA
Indicator 3C	Assessment -- Proficiency Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0382 Van Norman Elem

INDICATOR #4 - Suspension and Expulsion Rates

Districts who have been identified as having a significant discrepancy in long-term suspension and expulsion rates.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 4A	Suspension and Expulsion Rates	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

OPI School Discipline Data Collection reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The assessment of a school district's performance based on long-term suspension and expulsion rates is done by comparing the suspension and expulsion rates for students with disabilities to the long-term suspension and expulsion rates for nondisabled students. Long-term suspension or expulsion is defined as a suspension or expulsion that results in removal of a student, out-of-school, for greater than 10 school days or a student with multiple short-term (10 school days or less) out-of-school suspensions or expulsions that sum to greater than 10 school days during the school year.

For each racial/ethnic group, a statistical test of the difference between proportions is conducted to determine if the size of difference between the school district's special education long-term suspension and expulsion rates and the long-term suspension and expulsion rates for regular education students in the school district is statistically significant. In our comparison of long-term suspension and expulsion rates, we have set a .05 level of significance. This means, we are 95 percent confident that the differences between the rates are real (significant) and not due to random factors. However, the precision and reliability of this method is dependent upon having a large enough sample size to be representative of the school district's population and so, we also employ a minimum sample size (minimum N) of 10.

If the difference between the long-term suspension and expulsion rates for students with disabilities and the rates for nondisabled students by race/ethnicity group is statistically significant for a specific school district, the school district is flagged for additional investigation to determine if a significant discrepancy is occurring in the rates of long-term suspensions and expulsions of students with disabilities in a school year. This includes validation of the school district's long-term suspension and expulsion data and a systematic review of complaints/mediation/due process information, compliance monitoring and program data.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0382 Van Norman Elem

INDICATOR #5 - Education Environment Rates

Percent of children with IEPs, aged 6-21,

5A. Removed from the regular class less than 21% of the school day.

5B. Removed from regular class greater than 60% of the day; or

5C. Served in public or private separate schools, residential placements, or homebound or hospital placements.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 5A	Education Environment Rate -- Reg Class > 80% of day	*	*	*	*	*	*	*
Indicator 5B	Education Environment Rate -- Reg Class < 40% of day	*	*	*	*	*	*	*
Indicator 5C	Education Environment Rate -- Sep Schls	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0382 Van Norman Elem

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

OPI Compliance Monitoring

Indicator Data Note:

NA = Data not available as district was not monitored in the year in which data is being reported.

District performance for this indicator is only for districts monitored in the year in which data is being reported. The OPI reviews a sample of student records as part of its compliance monitoring activities to determine if children referred by a Part C Service Provider Agency have an IEP in place at the age of three. A review of student records is to identify noncompliance issues with respect to 34 CFR 300.111 Child Find or 34 CFR 300.124 Transition of children from the Part C program to preschool programs.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0127 Vaughn Elem

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0127 Vaughn Elem

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0127 Vaughn Elem

INDICATOR #3 - Statewide Assessments

Participation and performance of children with disabilities on statewide assessments:

3A. Has District met the state's AYP objectives for progress for disability subgroup?

3B. Participation rate for children with IEPs in statewide assessments.

3C. Proficiency rate for children with IEPs against grade-level standards and alternate achievement standards.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 3A	Assessment -- Meeting AYP Objectives	*	*	*	*	*	*	*
Indicator 3B	Assessment -- Participation Rates	24	24	1 (100%)	0.86205	1.00001	0.98 (98%)	Met
Indicator 3C	Assessment -- Proficiency Rates	*	*	*	*	*	*	*

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0127 Vaughn Elem

INDICATOR #4 - Suspension and Expulsion Rates

Districts who have been identified as having a significant discrepancy in long-term suspension and expulsion rates.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 4A	Suspension and Expulsion Rates	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

OPI School Discipline Data Collection reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The assessment of a school district's performance based on long-term suspension and expulsion rates is done by comparing the suspension and expulsion rates for students with disabilities to the long-term suspension and expulsion rates for nondisabled students. Long-term suspension or expulsion is defined as a suspension or expulsion that results in removal of a student, out-of-school, for greater than 10 school days or a student with multiple short-term (10 school days or less) out-of-school suspensions or expulsions that sum to greater than 10 school days during the school year.

For each racial/ethnic group, a statistical test of the difference between proportions is conducted to determine if the size of difference between the school district's special education long-term suspension and expulsion rates and the long-term suspension and expulsion rates for regular education students in the school district is statistically significant. In our comparison of long-term suspension and expulsion rates, we have set a .05 level of significance. This means, we are 95 percent confident that the differences between the rates are real (significant) and not due to random factors. However, the precision and reliability of this method is dependent upon having a large enough sample size to be representative of the school district's population and so, we also employ a minimum sample size (minimum N) of 10.

If the difference between the long-term suspension and expulsion rates for students with disabilities and the rates for nondisabled students by race/ethnicity group is statistically significant for a specific school district, the school district is flagged for additional investigation to determine if a significant discrepancy is occurring in the rates of long-term suspensions and expulsions of students with disabilities in a school year. This includes validation of the school district's long-term suspension and expulsion data and a systematic review of complaints/mediation/due process information, compliance monitoring and program data.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0127 Vaughn Elem

INDICATOR #5 - Education Environment Rates

Percent of children with IEPs, aged 6-21,

5A. Removed from the regular class less than 21% of the school day.

5B. Removed from regular class greater than 60% of the day; or

5C. Served in public or private separate schools, residential placements, or homebound or hospital placements.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 5A	Education Environment Rate -- Reg Class > 80% of day	18	7	0.39 (39%)	0.13537	0.72111	0.5 (50%)	Met
Indicator 5B	Education Environment Rate -- Reg Class < 40% of day	18	3	0.17 (17%)	0.01758	0.69001	0.12 (12%)	Met
Indicator 5C	Education Environment Rate -- Sep Schls	18	0	0 (0%)	0	0	0.018 (1.8%)	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0127 Vaughn Elem

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0127 Vaughn Elem

INDICATOR #12 - Children Referred By Part C

Percent of children referred by Part C, prior to age 3, who are found eligible for Part B, and who have an IEP developed and implemented by their third birthday.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 12	Children referred by Part C	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI Compliance Monitoring

Indicator Data Note:

NA = Data not available as district was not monitored in the year in which data is being reported.

District performance for this indicator is only for districts monitored in the year in which data is being reported. The OPI reviews a sample of student records as part of its compliance monitoring activities to determine if children referred by a Part C Service Provider Agency have an IEP in place at the age of three. A review of student records is to identify noncompliance issues with respect to 34 CFR 300.111 Child Find or 34 CFR 300.124 Transition of children from the Part C program to preschool programs.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

0738 Victor K-12 Schools

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

0738 Victor K-12 Schools

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	18	0	0 (0%)	0	0	0.058 (5.8%)	Met

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

INDICATOR #3 - Statewide Assessments

Participation and performance of children with disabilities on statewide assessments:

3A. Has District met the state's AYP objectives for progress for disability subgroup?

3B. Participation rate for children with IEPs in statewide assessments.

3C. Proficiency rate for children with IEPs against grade-level standards and alternate achievement standards.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 3A	Assessment -- Meeting AYP Objectives	*	*	*	*	*	*	*
Indicator 3B	Assessment -- Participation Rates	44	39	0.89 (89%)	0.75058	0.95289	0.98 (98%)	Not Met
Indicator 3C	Assessment -- Proficiency Rates	44	17	0.39 (39%)	0.1972	0.6174	0.295 (29.5%)	Met

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

INDICATOR #5 - Education Environment Rates

Percent of children with IEPs, aged 6-21,

5A. Removed from the regular class less than 21% of the school day.

5B. Removed from regular class greater than 60% of the day; or

5C. Served in public or private separate schools, residential placements, or homebound or hospital placements.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 5A	Education Environment Rate -- Reg Class > 80% of day	32	6	0.19 (19%)	0.03677	0.58213	0.5 (50%)	Met
Indicator 5B	Education Environment Rate -- Reg Class < 40% of day	32	0	0 (0%)	0	0	0.12 (12%)	Met
Indicator 5C	Education Environment Rate -- Sep Schls	32	0	0 (0%)	0	0	0.018 (1.8%)	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

0738 Victor K-12 Schools

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0738 Victor K-12 Schools

INDICATOR #12 - Children Referred By Part C

Percent of children referred by Part C, prior to age 3, who are found eligible for Part B, and who have an IEP developed and implemented by their third birthday.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 12	Children referred by Part C	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI Compliance Monitoring

Indicator Data Note:

NA = Data not available as district was not monitored in the year in which data is being reported.

District performance for this indicator is only for districts monitored in the year in which data is being reported. The OPI reviews a sample of student records as part of its compliance monitoring activities to determine if children referred by a Part C Service Provider Agency have an IEP in place at the age of three. A review of student records is to identify noncompliance issues with respect to 34 CFR 300.111 Child Find or 34 CFR 300.124 Transition of children from the Part C program to preschool programs.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0566 Vida Elem

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

0566 Vida Elem

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

INDICATOR #3 - Statewide Assessments

Participation and performance of children with disabilities on statewide assessments:

3A. Has District met the state's AYP objectives for progress for disability subgroup?

3B. Participation rate for children with IEPs in statewide assessments.

3C. Proficiency rate for children with IEPs against grade-level standards and alternate achievement standards.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 3A	Assessment -- Meeting AYP Objectives	NA	NA	NA	NA	NA	NA	NA
Indicator 3B	Assessment -- Participation Rates	NA	NA	NA	NA	NA	NA	NA
Indicator 3C	Assessment -- Proficiency Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

0566 Vida Elem

INDICATOR #4 - Suspension and Expulsion Rates

Districts who have been identified as having a significant discrepancy in long-term suspension and expulsion rates.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 4A	Suspension and Expulsion Rates	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

OPI School Discipline Data Collection reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The assessment of a school district's performance based on long-term suspension and expulsion rates is done by comparing the suspension and expulsion rates for students with disabilities to the long-term suspension and expulsion rates for nondisabled students. Long-term suspension or expulsion is defined as a suspension or expulsion that results in removal of a student, out-of-school, for greater than 10 school days or a student with multiple short-term (10 school days or less) out-of-school suspensions or expulsions that sum to greater than 10 school days during the school year.

For each racial/ethnic group, a statistical test of the difference between proportions is conducted to determine if the size of difference between the school district's special education long-term suspension and expulsion rates and the long-term suspension and expulsion rates for regular education students in the school district is statistically significant. In our comparison of long-term suspension and expulsion rates, we have set a .05 level of significance. This means, we are 95 percent confident that the differences between the rates are real (significant) and not due to random factors. However, the precision and reliability of this method is dependent upon having a large enough sample size to be representative of the school district's population and so, we also employ a minimum sample size (minimum N) of 10.

If the difference between the long-term suspension and expulsion rates for students with disabilities and the rates for nondisabled students by race/ethnicity group is statistically significant for a specific school district, the school district is flagged for additional investigation to determine if a significant discrepancy is occurring in the rates of long-term suspensions and expulsions of students with disabilities in a school year. This includes validation of the school district's long-term suspension and expulsion data and a systematic review of complaints/mediation/due process information, compliance monitoring and program data.

INDICATOR #5 - Education Environment Rates

Percent of children with IEPs, aged 6-21,

5A. Removed from the regular class less than 21% of the school day.

5B. Removed from regular class greater than 60% of the day; or

5C. Served in public or private separate schools, residential placements, or homebound or hospital placements.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 5A	Education Environment Rate -- Reg Class > 80% of day	*	*	*	*	*	*	*
Indicator 5B	Education Environment Rate -- Reg Class < 40% of day	*	*	*	*	*	*	*
Indicator 5C	Education Environment Rate -- Sep Schls	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

Indicator 1	Graduation Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

0144 Warrick Elem

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

INDICATOR #3 - Statewide Assessments

Participation and performance of children with disabilities on statewide assessments:

3A. Has District met the state's AYP objectives for progress for disability subgroup?

3B. Participation rate for children with IEPs in statewide assessments.

3C. Proficiency rate for children with IEPs against grade-level standards and alternate achievement standards.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 3A	Assessment -- Meeting AYP Objectives	*	*	*	*	*	*	*
Indicator 3B	Assessment -- Participation Rates	*	*	*	*	*	*	*
Indicator 3C	Assessment -- Proficiency Rates	*	*	*	*	*	*	*

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

0144 Warrick Elem

INDICATOR #4 - Suspension and Expulsion Rates

Districts who have been identified as having a significant discrepancy in long-term suspension and expulsion rates.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 4A	Suspension and Expulsion Rates	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

OPI School Discipline Data Collection reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The assessment of a school district's performance based on long-term suspension and expulsion rates is done by comparing the suspension and expulsion rates for students with disabilities to the long-term suspension and expulsion rates for nondisabled students. Long-term suspension or expulsion is defined as a suspension or expulsion that results in removal of a student, out-of-school, for greater than 10 school days or a student with multiple short-term (10 school days or less) out-of-school suspensions or expulsions that sum to greater than 10 school days during the school year.

For each racial/ethnic group, a statistical test of the difference between proportions is conducted to determine if the size of difference between the school district's special education long-term suspension and expulsion rates and the long-term suspension and expulsion rates for regular education students in the school district is statistically significant. In our comparison of long-term suspension and expulsion rates, we have set a .05 level of significance. This means, we are 95 percent confident that the differences between the rates are real (significant) and not due to random factors. However, the precision and reliability of this method is dependent upon having a large enough sample size to be representative of the school district's population and so, we also employ a minimum sample size (minimum N) of 10.

If the difference between the long-term suspension and expulsion rates for students with disabilities and the rates for nondisabled students by race/ethnicity group is statistically significant for a specific school district, the school district is flagged for additional investigation to determine if a significant discrepancy is occurring in the rates of long-term suspensions and expulsions of students with disabilities in a school year. This includes validation of the school district's long-term suspension and expulsion data and a systematic review of complaints/mediation/due process information, compliance monitoring and program data.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

0144 Warrick Elem

INDICATOR #5 - Education Environment Rates

Percent of children with IEPs, aged 6-21,

5A. Removed from the regular class less than 21% of the school day.

5B. Removed from regular class greater than 60% of the day; or

5C. Served in public or private separate schools, residential placements, or homebound or hospital placements.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 5A	Education Environment Rate -- Reg Class > 80% of day	*	*	*	*	*	*	*
Indicator 5B	Education Environment Rate -- Reg Class < 40% of day	*	*	*	*	*	*	*
Indicator 5C	Education Environment Rate -- Sep Schls	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0144 Warrick Elem

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0144 Warrick Elem

INDICATOR #12 - Children Referred By Part C

Percent of children referred by Part C, prior to age 3, who are found eligible for Part B, and who have an IEP developed and implemented by their third birthday.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 12	Children referred by Part C	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI Compliance Monitoring

Indicator Data Note:

NA = Data not available as district was not monitored in the year in which data is being reported.

District performance for this indicator is only for districts monitored in the year in which data is being reported. The OPI reviews a sample of student records as part of its compliance monitoring activities to determine if children referred by a Part C Service Provider Agency have an IEP in place at the age of three. A review of student records is to identify noncompliance issues with respect to 34 CFR 300.111 Child Find or 34 CFR 300.124 Transition of children from the Part C program to preschool programs.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 1223 West Glacier Elem

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 1223 West Glacier Elem

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 1223 West Glacier Elem

INDICATOR #3 - Statewide Assessments

Participation and performance of children with disabilities on statewide assessments:

3A. Has District met the state's AYP objectives for progress for disability subgroup?

3B. Participation rate for children with IEPs in statewide assessments.

3C. Proficiency rate for children with IEPs against grade-level standards and alternate achievement standards.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 3A	Assessment -- Meeting AYP Objectives	*	*	*	*	*	*	*
Indicator 3B	Assessment -- Participation Rates	*	*	*	*	*	*	*
Indicator 3C	Assessment -- Proficiency Rates	*	*	*	*	*	*	*

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 1223 West Glacier Elem

INDICATOR #4 - Suspension and Expulsion Rates

Districts who have been identified as having a significant discrepancy in long-term suspension and expulsion rates.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 4A	Suspension and Expulsion Rates	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

OPI School Discipline Data Collection reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The assessment of a school district's performance based on long-term suspension and expulsion rates is done by comparing the suspension and expulsion rates for students with disabilities to the long-term suspension and expulsion rates for nondisabled students. Long-term suspension or expulsion is defined as a suspension or expulsion that results in removal of a student, out-of-school, for greater than 10 school days or a student with multiple short-term (10 school days or less) out-of-school suspensions or expulsions that sum to greater than 10 school days during the school year.

For each racial/ethnic group, a statistical test of the difference between proportions is conducted to determine if the size of difference between the school district's special education long-term suspension and expulsion rates and the long-term suspension and expulsion rates for regular education students in the school district is statistically significant. In our comparison of long-term suspension and expulsion rates, we have set a .05 level of significance. This means, we are 95 percent confident that the differences between the rates are real (significant) and not due to random factors. However, the precision and reliability of this method is dependent upon having a large enough sample size to be representative of the school district's population and so, we also employ a minimum sample size (minimum N) of 10.

If the difference between the long-term suspension and expulsion rates for students with disabilities and the rates for nondisabled students by race/ethnicity group is statistically significant for a specific school district, the school district is flagged for additional investigation to determine if a significant discrepancy is occurring in the rates of long-term suspensions and expulsions of students with disabilities in a school year. This includes validation of the school district's long-term suspension and expulsion data and a systematic review of complaints/mediation/due process information, compliance monitoring and program data.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 1223 West Glacier Elem

INDICATOR #5 - Education Environment Rates

Percent of children with IEPs, aged 6-21,

5A. Removed from the regular class less than 21% of the school day.

5B. Removed from regular class greater than 60% of the day; or

5C. Served in public or private separate schools, residential placements, or homebound or hospital placements.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 5A	Education Environment Rate -- Reg Class > 80% of day	*	*	*	*	*	*	*
Indicator 5B	Education Environment Rate -- Reg Class < 40% of day	*	*	*	*	*	*	*
Indicator 5C	Education Environment Rate -- Sep Schls	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 1223 West Glacier Elem

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 1223 West Glacier Elem

INDICATOR #12 - Children Referred By Part C

Percent of children referred by Part C, prior to age 3, who are found eligible for Part B, and who have an IEP developed and implemented by their third birthday.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 12	Children referred by Part C	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI Compliance Monitoring

Indicator Data Note:

NA = Data not available as district was not monitored in the year in which data is being reported.

District performance for this indicator is only for districts monitored in the year in which data is being reported. The OPI reviews a sample of student records as part of its compliance monitoring activities to determine if children referred by a Part C Service Provider Agency have an IEP in place at the age of three. A review of student records is to identify noncompliance issues with respect to 34 CFR 300.111 Child Find or 34 CFR 300.124 Transition of children from the Part C program to preschool programs.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 1184 West Valley Elem

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 1184 West Valley Elem

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 1184 West Valley Elem

INDICATOR #3 - Statewide Assessments

Participation and performance of children with disabilities on statewide assessments:

3A. Has District met the state's AYP objectives for progress for disability subgroup?

3B. Participation rate for children with IEPs in statewide assessments.

3C. Proficiency rate for children with IEPs against grade-level standards and alternate achievement standards.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 3A	Assessment -- Meeting AYP Objectives	*	*	*	*	*	*	*
Indicator 3B	Assessment -- Participation Rates	34	29	0.85 (85%)	0.6837	0.93964	0.98 (98%)	Not Met
Indicator 3C	Assessment -- Proficiency Rates	*	*	*	*	*	*	*

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 1184 West Valley Elem

INDICATOR #4 - Suspension and Expulsion Rates

Districts who have been identified as having a significant discrepancy in long-term suspension and expulsion rates.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 4A	Suspension and Expulsion Rates	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

OPI School Discipline Data Collection reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The assessment of a school district's performance based on long-term suspension and expulsion rates is done by comparing the suspension and expulsion rates for students with disabilities to the long-term suspension and expulsion rates for nondisabled students. Long-term suspension or expulsion is defined as a suspension or expulsion that results in removal of a student, out-of-school, for greater than 10 school days or a student with multiple short-term (10 school days or less) out-of-school suspensions or expulsions that sum to greater than 10 school days during the school year.

For each racial/ethnic group, a statistical test of the difference between proportions is conducted to determine if the size of difference between the school district's special education long-term suspension and expulsion rates and the long-term suspension and expulsion rates for regular education students in the school district is statistically significant. In our comparison of long-term suspension and expulsion rates, we have set a .05 level of significance. This means, we are 95 percent confident that the differences between the rates are real (significant) and not due to random factors. However, the precision and reliability of this method is dependent upon having a large enough sample size to be representative of the school district's population and so, we also employ a minimum sample size (minimum N) of 10.

If the difference between the long-term suspension and expulsion rates for students with disabilities and the rates for nondisabled students by race/ethnicity group is statistically significant for a specific school district, the school district is flagged for additional investigation to determine if a significant discrepancy is occurring in the rates of long-term suspensions and expulsions of students with disabilities in a school year. This includes validation of the school district's long-term suspension and expulsion data and a systematic review of complaints/mediation/due process information, compliance monitoring and program data.

Indicator 5B	Education Environment Rate -- Reg Class < 40% of day	20	2	0.1 (10%)	0.00467	0.72135	0.12 (12%)	Met
Indicator 5C	Education Environment Rate -- Sep Schls	20	0	0 (0%)	0	0	0.018 (1.8%)	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 1184 West Valley Elem

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 1184 West Valley Elem

INDICATOR #12 - Children Referred By Part C

Percent of children referred by Part C, prior to age 3, who are found eligible for Part B, and who have an IEP developed and implemented by their third birthday.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 12	Children referred by Part C	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI Compliance Monitoring

Indicator Data Note:

NA = Data not available as district was not monitored in the year in which data is being reported.

District performance for this indicator is only for districts monitored in the year in which data is being reported. The OPI reviews a sample of student records as part of its compliance monitoring activities to determine if children referred by a Part C Service Provider Agency have an IEP in place at the age of three. A review of student records is to identify noncompliance issues with respect to 34 CFR 300.111 Child Find or 34 CFR 300.124 Transition of children from the Part C program to preschool programs.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0374 West Yellowstone K-12

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

0374 West Yellowstone K-12

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	14	2	0.14 (14%)	0.00929	0.74608	0.058 (5.8%)	Met

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0374 West Yellowstone K-12

INDICATOR #3 - Statewide Assessments

Participation and performance of children with disabilities on statewide assessments:

3A. Has District met the state's AYP objectives for progress for disability subgroup?

3B. Participation rate for children with IEPs in statewide assessments.

3C. Proficiency rate for children with IEPs against grade-level standards and alternate achievement standards.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 3A	Assessment -- Meeting AYP Objectives	*	*	*	*	*	*	*
Indicator 3B	Assessment -- Participation Rates	46	42	0.91 (91%)	0.78984	0.96705	0.98 (98%)	Not Met
Indicator 3C	Assessment -- Proficiency Rates	*	*	*	*	*	*	*

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

0374 West Yellowstone K-12

INDICATOR #4 - Suspension and Expulsion Rates

Districts who have been identified as having a significant discrepancy in long-term suspension and expulsion rates.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 4A	Suspension and Expulsion Rates	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

OPI School Discipline Data Collection reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The assessment of a school district's performance based on long-term suspension and expulsion rates is done by comparing the suspension and expulsion rates for students with disabilities to the long-term suspension and expulsion rates for nondisabled students. Long-term suspension or expulsion is defined as a suspension or expulsion that results in removal of a student, out-of-school, for greater than 10 school days or a student with multiple short-term (10 school days or less) out-of-school suspensions or expulsions that sum to greater than 10 school days during the school year.

For each racial/ethnic group, a statistical test of the difference between proportions is conducted to determine if the size of difference between the school district's special education long-term suspension and expulsion rates and the long-term suspension and expulsion rates for regular education students in the school district is statistically significant. In our comparison of long-term suspension and expulsion rates, we have set a .05 level of significance. This means, we are 95 percent confident that the differences between the rates are real (significant) and not due to random factors. However, the precision and reliability of this method is dependent upon having a large enough sample size to be representative of the school district's population and so, we also employ a minimum sample size (minimum N) of 10.

If the difference between the long-term suspension and expulsion rates for students with disabilities and the rates for nondisabled students by race/ethnicity group is statistically significant for a specific school district, the school district is flagged for additional investigation to determine if a significant discrepancy is occurring in the rates of long-term suspensions and expulsions of students with disabilities in a school year. This includes validation of the school district's long-term suspension and expulsion data and a systematic review of complaints/mediation/due process information, compliance monitoring and program data.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0374 West Yellowstone K-12

INDICATOR #5 - Education Environment Rates

Percent of children with IEPs, aged 6-21,

5A. Removed from the regular class less than 21% of the school day.

5B. Removed from regular class greater than 60% of the day; or

5C. Served in public or private separate schools, residential placements, or homebound or hospital placements.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 5A	Education Environment Rate -- Reg Class > 80% of day	36	17	0.47 (47%)	0.26293	0.69174	0.5 (50%)	Met
Indicator 5B	Education Environment Rate -- Reg Class < 40% of day	36	2	0.06 (6%)	0.00145	0.69413	0.12 (12%)	Met
Indicator 5C	Education Environment Rate -- Sep Schls	36	0	0 (0%)	0	0	0.018 (1.8%)	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

0374 West Yellowstone K-12

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0374 West Yellowstone K-12

INDICATOR #12 - Children Referred By Part C

Percent of children referred by Part C, prior to age 3, who are found eligible for Part B, and who have an IEP developed and implemented by their third birthday.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 12	Children referred by Part C	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI Compliance Monitoring

Indicator Data Note:

NA = Data not available as district was not monitored in the year in which data is being reported.

District performance for this indicator is only for districts monitored in the year in which data is being reported. The OPI reviews a sample of student records as part of its compliance monitoring activities to determine if children referred by a Part C Service Provider Agency have an IEP in place at the age of three. A review of student records is to identify noncompliance issues with respect to 34 CFR 300.111 Child Find or 34 CFR 300.124 Transition of children from the Part C program to preschool programs.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0819 Westby K-12 Schools

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0819 Westby K-12 Schools

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0819 Westby K-12 Schools

INDICATOR #4 - Suspension and Expulsion Rates

Districts who have been identified as having a significant discrepancy in long-term suspension and expulsion rates.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 4A	Suspension and Expulsion Rates	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

OPI School Discipline Data Collection reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The assessment of a school district's performance based on long-term suspension and expulsion rates is done by comparing the suspension and expulsion rates for students with disabilities to the long-term suspension and expulsion rates for nondisabled students. Long-term suspension or expulsion is defined as a suspension or expulsion that results in removal of a student, out-of-school, for greater than 10 school days or a student with multiple short-term (10 school days or less) out-of-school suspensions or expulsions that sum to greater than 10 school days during the school year.

For each racial/ethnic group, a statistical test of the difference between proportions is conducted to determine if the size of difference between the school district's special education long-term suspension and expulsion rates and the long-term suspension and expulsion rates for regular education students in the school district is statistically significant. In our comparison of long-term suspension and expulsion rates, we have set a .05 level of significance. This means, we are 95 percent confident that the differences between the rates are real (significant) and not due to random factors. However, the precision and reliability of this method is dependent upon having a large enough sample size to be representative of the school district's population and so, we also employ a minimum sample size (minimum N) of 10.

If the difference between the long-term suspension and expulsion rates for students with disabilities and the rates for nondisabled students by race/ethnicity group is statistically significant for a specific school district, the school district is flagged for additional investigation to determine if a significant discrepancy is occurring in the rates of long-term suspensions and expulsions of students with disabilities in a school year. This includes validation of the school district's long-term suspension and expulsion data and a systematic review of complaints/mediation/due process information, compliance monitoring and program data.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0819 Westby K-12 Schools

INDICATOR #5 - Education Environment Rates

Percent of children with IEPs, aged 6-21,

5A. Removed from the regular class less than 21% of the school day.

5B. Removed from regular class greater than 60% of the day; or

5C. Served in public or private separate schools, residential placements, or homebound or hospital placements.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 5A	Education Environment Rate -- Reg Class > 80% of day	11	9	0.82 (82%)	0.49158	0.95446	0.5 (50%)	Met
Indicator 5B	Education Environment Rate -- Reg Class < 40% of day	11	0	0 (0%)	0	0	0.12 (12%)	Met
Indicator 5C	Education Environment Rate -- Sep Schls	11	0	0 (0%)	0	0	0.018 (1.8%)	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0819 Westby K-12 Schools

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0819 Westby K-12 Schools

INDICATOR #12 - Children Referred By Part C

Percent of children referred by Part C, prior to age 3, who are found eligible for Part B, and who have an IEP developed and implemented by their third birthday.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 12	Children referred by Part C	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI Compliance Monitoring

Indicator Data Note:

NA = Data not available as district was not monitored in the year in which data is being reported.

District performance for this indicator is only for districts monitored in the year in which data is being reported. The OPI reviews a sample of student records as part of its compliance monitoring activities to determine if children referred by a Part C Service Provider Agency have an IEP in place at the age of three. A review of student records is to identify noncompliance issues with respect to 34 CFR 300.111 Child Find or 34 CFR 300.124 Transition of children from the Part C program to preschool programs.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0569 White Sulphur Spgs Elem

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

0569 White Sulphur Spgs Elem

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0569 White Sulphur Spgs Elem

INDICATOR #3 - Statewide Assessments

Participation and performance of children with disabilities on statewide assessments:

3A. Has District met the state's AYP objectives for progress for disability subgroup?

3B. Participation rate for children with IEPs in statewide assessments.

3C. Proficiency rate for children with IEPs against grade-level standards and alternate achievement standards.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 3A	Assessment -- Meeting AYP Objectives	*	*	*	*	*	*	*
Indicator 3B	Assessment -- Participation Rates	30	28	0.93 (93%)	0.77988	0.98226	0.98 (98%)	Met
Indicator 3C	Assessment -- Proficiency Rates	*	*	*	*	*	*	*

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0569 White Sulphur Spgs Elem

INDICATOR #4 - Suspension and Expulsion Rates

Districts who have been identified as having a significant discrepancy in long-term suspension and expulsion rates.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 4A	Suspension and Expulsion Rates	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

OPI School Discipline Data Collection reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The assessment of a school district's performance based on long-term suspension and expulsion rates is done by comparing the suspension and expulsion rates for students with disabilities to the long-term suspension and expulsion rates for nondisabled students. Long-term suspension or expulsion is defined as a suspension or expulsion that results in removal of a student, out-of-school, for greater than 10 school days or a student with multiple short-term (10 school days or less) out-of-school suspensions or expulsions that sum to greater than 10 school days during the school year.

For each racial/ethnic group, a statistical test of the difference between proportions is conducted to determine if the size of difference between the school district's special education long-term suspension and expulsion rates and the long-term suspension and expulsion rates for regular education students in the school district is statistically significant. In our comparison of long-term suspension and expulsion rates, we have set a .05 level of significance. This means, we are 95 percent confident that the differences between the rates are real (significant) and not due to random factors. However, the precision and reliability of this method is dependent upon having a large enough sample size to be representative of the school district's population and so, we also employ a minimum sample size (minimum N) of 10.

If the difference between the long-term suspension and expulsion rates for students with disabilities and the rates for nondisabled students by race/ethnicity group is statistically significant for a specific school district, the school district is flagged for additional investigation to determine if a significant discrepancy is occurring in the rates of long-term suspensions and expulsions of students with disabilities in a school year. This includes validation of the school district's long-term suspension and expulsion data and a systematic review of complaints/mediation/due process information, compliance monitoring and program data.

Indicator 5B	Education Environment Rate -- Reg Class < 40% of day	22	0	0 (0%)	0	0	0.12 (12%)	Met
Indicator 5C	Education Environment Rate -- Sep Schls	22	0	0 (0%)	0	0	0.018 (1.8%)	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

0569 White Sulphur Spgs Elem

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0569 White Sulphur Spgs Elem

INDICATOR #12 - Children Referred By Part C

Percent of children referred by Part C, prior to age 3, who are found eligible for Part B, and who have an IEP developed and implemented by their third birthday.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 12	Children referred by Part C	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI Compliance Monitoring

Indicator Data Note:

NA = Data not available as district was not monitored in the year in which data is being reported.

District performance for this indicator is only for districts monitored in the year in which data is being reported. The OPI reviews a sample of student records as part of its compliance monitoring activities to determine if children referred by a Part C Service Provider Agency have an IEP in place at the age of three. A review of student records is to identify noncompliance issues with respect to 34 CFR 300.111 Child Find or 34 CFR 300.124 Transition of children from the Part C program to preschool programs.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0570 White Sulphur Spgs H S

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

0570 White Sulphur Spgs H S

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	16	0	0 (0%)	0	0	0.058 (5.8%)	Met

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0570 White Sulphur Spgs H S

INDICATOR #3 - Statewide Assessments

Participation and performance of children with disabilities on statewide assessments:

3A. Has District met the state's AYP objectives for progress for disability subgroup?

3B. Participation rate for children with IEPs in statewide assessments.

3C. Proficiency rate for children with IEPs against grade-level standards and alternate achievement standards.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 3A	Assessment -- Meeting AYP Objectives	*	*	*	*	*	*	*
Indicator 3B	Assessment -- Participation Rates	10	10	1 (100%)	0.72251	1.00003	0.98 (98%)	Met
Indicator 3C	Assessment -- Proficiency Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0570 White Sulphur Spgs H S

INDICATOR #4 - Suspension and Expulsion Rates

Districts who have been identified as having a significant discrepancy in long-term suspension and expulsion rates.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 4A	Suspension and Expulsion Rates	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

OPI School Discipline Data Collection reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The assessment of a school district's performance based on long-term suspension and expulsion rates is done by comparing the suspension and expulsion rates for students with disabilities to the long-term suspension and expulsion rates for nondisabled students. Long-term suspension or expulsion is defined as a suspension or expulsion that results in removal of a student, out-of-school, for greater than 10 school days or a student with multiple short-term (10 school days or less) out-of-school suspensions or expulsions that sum to greater than 10 school days during the school year.

For each racial/ethnic group, a statistical test of the difference between proportions is conducted to determine if the size of difference between the school district's special education long-term suspension and expulsion rates and the long-term suspension and expulsion rates for regular education students in the school district is statistically significant. In our comparison of long-term suspension and expulsion rates, we have set a .05 level of significance. This means, we are 95 percent confident that the differences between the rates are real (significant) and not due to random factors. However, the precision and reliability of this method is dependent upon having a large enough sample size to be representative of the school district's population and so, we also employ a minimum sample size (minimum N) of 10.

If the difference between the long-term suspension and expulsion rates for students with disabilities and the rates for nondisabled students by race/ethnicity group is statistically significant for a specific school district, the school district is flagged for additional investigation to determine if a significant discrepancy is occurring in the rates of long-term suspensions and expulsions of students with disabilities in a school year. This includes validation of the school district's long-term suspension and expulsion data and a systematic review of complaints/mediation/due process information, compliance monitoring and program data.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0570 White Sulphur Spgs H S

INDICATOR #5 - Education Environment Rates

Percent of children with IEPs, aged 6-21,

5A. Removed from the regular class less than 21% of the school day.

5B. Removed from regular class greater than 60% of the day; or

5C. Served in public or private separate schools, residential placements, or homebound or hospital placements.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 5A	Education Environment Rate -- Reg Class > 80% of day	16	9	0.56 (56%)	0.27181	0.81579	0.5 (50%)	Met
Indicator 5B	Education Environment Rate -- Reg Class < 40% of day	16	3	0.19 (19%)	0.02183	0.70404	0.12 (12%)	Met
Indicator 5C	Education Environment Rate -- Sep Schls	16	0	0 (0%)	0	0	0.018 (1.8%)	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0570 White Sulphur Spgs H S

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

Indicator Data Source:

OPI Compliance Monitoring

Indicator Data Note:

NA = Data not available as district was not monitored in the year in which data is being reported.

District performance for this indicator is only for districts monitored in the year in which data is being reported. The OPI reviews a sample of student records as part of its compliance monitoring activities to determine if children referred by a Part C Service Provider Agency have an IEP in place at the age of three. A review of student records is to identify noncompliance issues with respect to 34 CFR 300.111 Child Find or 34 CFR 300.124 Transition of children from the Part C program to preschool programs.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0334 Whitefish Elem

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0334 Whitefish Elem

INDICATOR #3 - Statewide Assessments

Participation and performance of children with disabilities on statewide assessments:

3A. Has District met the state's AYP objectives for progress for disability subgroup?

3B. Participation rate for children with IEPs in statewide assessments.

3C. Proficiency rate for children with IEPs against grade-level standards and alternate achievement standards.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 3A	Assessment -- Meeting AYP Objectives			(%)			NA	Not Met
Indicator 3B	Assessment -- Participation Rates	142	164	1 (100%)	0.97712	1	0.98 (98%)	Met
Indicator 3C	Assessment -- Proficiency Rates	142	80	0.56 (56%)	0.45427	0.66668	0.295 (29.5%)	Met

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0334 Whitefish Elem

INDICATOR #4 - Suspension and Expulsion Rates

Districts who have been identified as having a significant discrepancy in long-term suspension and expulsion rates.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 4A	Suspension and Expulsion Rates	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

OPI School Discipline Data Collection reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The assessment of a school district's performance based on long-term suspension and expulsion rates is done by comparing the suspension and expulsion rates for students with disabilities to the long-term suspension and expulsion rates for nondisabled students. Long-term suspension or expulsion is defined as a suspension or expulsion that results in removal of a student, out-of-school, for greater than 10 school days or a student with multiple short-term (10 school days or less) out-of-school suspensions or expulsions that sum to greater than 10 school days during the school year.

For each racial/ethnic group, a statistical test of the difference between proportions is conducted to determine if the size of difference between the school district's special education long-term suspension and expulsion rates and the long-term suspension and expulsion rates for regular education students in the school district is statistically significant. In our comparison of long-term suspension and expulsion rates, we have set a .05 level of significance. This means, we are 95 percent confident that the differences between the rates are real (significant) and not due to random factors. However, the precision and reliability of this method is dependent upon having a large enough sample size to be representative of the school district's population and so, we also employ a minimum sample size (minimum N) of 10.

If the difference between the long-term suspension and expulsion rates for students with disabilities and the rates for nondisabled students by race/ethnicity group is statistically significant for a specific school district, the school district is flagged for additional investigation to determine if a significant discrepancy is occurring in the rates of long-term suspensions and expulsions of students with disabilities in a school year. This includes validation of the school district's long-term suspension and expulsion data and a systematic review of complaints/mediation/due process information, compliance monitoring and program data.

0334 Whitefish Elem

INDICATOR #5 - Education Environment Rates

Percent of children with IEPs, aged 6-21,

5A. Removed from the regular class less than 21% of the school day.

5B. Removed from regular class greater than 60% of the day; or

5C. Served in public or private separate schools, residential placements, or homebound or hospital placements.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 5A	Education Environment Rate -- Reg Class > 80% of day	104	64	0.62 (62%)	0.49289	0.7248	0.5 (50%)	Met
Indicator 5B	Education Environment Rate -- Reg Class < 40% of day	104	5	0.05 (5%)	0.00263	0.48613	0.12 (12%)	Met
Indicator 5C	Education Environment Rate -- Sep Schls	104	0	0 (0%)	0	0	0.018 (1.8%)	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0334 Whitefish Elem

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	19	13	0.68 (68%)	0.41625	0.86815	0.548 (54.8%)	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0334 Whitefish Elem

INDICATOR #12 - Children Referred By Part C

Percent of children referred by Part C, prior to age 3, who are found eligible for Part B, and who have an IEP developed and implemented by their third birthday.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 12	Children referred by Part C	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI Compliance Monitoring

Indicator Data Note:

NA = Data not available as district was not monitored in the year in which data is being reported.

District performance for this indicator is only for districts monitored in the year in which data is being reported. The OPI reviews a sample of student records as part of its compliance monitoring activities to determine if children referred by a Part C Service Provider Agency have an IEP in place at the age of three. A review of student records is to identify noncompliance issues with respect to 34 CFR 300.111 Child Find or 34 CFR 300.124 Transition of children from the Part C program to preschool programs.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0335 Whitefish H S

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	15	11	0.73 (73%)	0.43999	0.90591	0.699 (69.9%)	Met

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

0335 Whitefish H S

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	41	3	0.07 (7%)	0.00371	0.62187	0.058 (5.8%)	Met

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

INDICATOR #3 - Statewide Assessments

Participation and performance of children with disabilities on statewide assessments:

3A. Has District met the state's AYP objectives for progress for disability subgroup?

3B. Participation rate for children with IEPs in statewide assessments.

3C. Proficiency rate for children with IEPs against grade-level standards and alternate achievement standards.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 3A	Assessment -- Meeting AYP Objectives	*	*	*	*	*	*	*
Indicator 3B	Assessment -- Participation Rates	18	18	1 (100%)	0.82416	1.00002	0.98 (98%)	Met
Indicator 3C	Assessment -- Proficiency Rates	*	*	*	*	*	*	*

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

District Name 0335 Whitefish H S

INDICATOR #5 - Education Environment Rates

Percent of children with IEPs, aged 6-21,

5A. Removed from the regular class less than 21% of the school day.

5B. Removed from regular class greater than 60% of the day; or

5C. Served in public or private separate schools, residential placements, or homebound or hospital placements.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 5A	Education Environment Rate -- Reg Class > 80% of day	41	8	0.2 (20%)	0.04755	0.54045	0.5 (50%)	Met
Indicator 5B	Education Environment Rate -- Reg Class < 40% of day	41	9	0.22 (22%)	0.06194	0.54484	0.12 (12%)	Met
Indicator 5C	Education Environment Rate -- Sep Schls	41	0	0 (0%)	0	0	0.018 (1.8%)	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

0335 Whitefish H S

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0335 Whitefish H S

INDICATOR #12 - Children Referred By Part C

Percent of children referred by Part C, prior to age 3, who are found eligible for Part B, and who have an IEP developed and implemented by their third birthday.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 12	Children referred by Part C	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI Compliance Monitoring

Indicator Data Note:

NA = Data not available as district was not monitored in the year in which data is being reported.

District performance for this indicator is only for districts monitored in the year in which data is being reported. The OPI reviews a sample of student records as part of its compliance monitoring activities to determine if children referred by a Part C Service Provider Agency have an IEP in place at the age of three. A review of student records is to identify noncompliance issues with respect to 34 CFR 300.111 Child Find or 34 CFR 300.124 Transition of children from the Part C program to preschool programs.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

0453 Whitehall Elem

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

0453 Whitehall Elem

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0453 Whitehall Elem

INDICATOR #3 - Statewide Assessments

Participation and performance of children with disabilities on statewide assessments:

3A. Has District met the state's AYP objectives for progress for disability subgroup?

3B. Participation rate for children with IEPs in statewide assessments.

3C. Proficiency rate for children with IEPs against grade-level standards and alternate achievement standards.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 3A	Assessment -- Meeting AYP Objectives	*	*	*	*	*	*	*
Indicator 3B	Assessment -- Participation Rates	54	54	1 (100%)	0.9336	1.00001	0.98 (98%)	Met
Indicator 3C	Assessment -- Proficiency Rates	54	13	0.24 (24%)	0.08727	0.51245	0.295 (29.5%)	Met

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0453 Whitehall Elem

INDICATOR #4 - Suspension and Expulsion Rates

Districts who have been identified as having a significant discrepancy in long-term suspension and expulsion rates.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 4A	Suspension and Expulsion Rates	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

OPI School Discipline Data Collection reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The assessment of a school district's performance based on long-term suspension and expulsion rates is done by comparing the suspension and expulsion rates for students with disabilities to the long-term suspension and expulsion rates for nondisabled students. Long-term suspension or expulsion is defined as a suspension or expulsion that results in removal of a student, out-of-school, for greater than 10 school days or a student with multiple short-term (10 school days or less) out-of-school suspensions or expulsions that sum to greater than 10 school days during the school year.

For each racial/ethnic group, a statistical test of the difference between proportions is conducted to determine if the size of difference between the school district's special education long-term suspension and expulsion rates and the long-term suspension and expulsion rates for regular education students in the school district is statistically significant. In our comparison of long-term suspension and expulsion rates, we have set a .05 level of significance. This means, we are 95 percent confident that the differences between the rates are real (significant) and not due to random factors. However, the precision and reliability of this method is dependent upon having a large enough sample size to be representative of the school district's population and so, we also employ a minimum sample size (minimum N) of 10.

If the difference between the long-term suspension and expulsion rates for students with disabilities and the rates for nondisabled students by race/ethnicity group is statistically significant for a specific school district, the school district is flagged for additional investigation to determine if a significant discrepancy is occurring in the rates of long-term suspensions and expulsions of students with disabilities in a school year. This includes validation of the school district's long-term suspension and expulsion data and a systematic review of complaints/mediation/due process information, compliance monitoring and program data.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

INDICATOR #5 - Education Environment Rates

Percent of children with IEPs, aged 6-21,

5A. Removed from the regular class less than 21% of the school day.

5B. Removed from regular class greater than 60% of the day; or

5C. Served in public or private separate schools, residential placements, or homebound or hospital placements.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 5A	Education Environment Rate -- Reg Class > 80% of day	40	34	0.85 (85%)	0.69529	0.93367	0.5 (50%)	Met
Indicator 5B	Education Environment Rate -- Reg Class < 40% of day	40	4	0.1 (10%)	0.00869	0.58314	0.12 (12%)	Met
Indicator 5C	Education Environment Rate -- Sep Schls	40	1	0.02 (2%)	0.00007	0.80364	0.018 (1.8%)	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0453 Whitehall Elem

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

Indicator Data Source:

OPI Compliance Monitoring

Indicator Data Note:

NA = Data not available as district was not monitored in the year in which data is being reported.

District performance for this indicator is only for districts monitored in the year in which data is being reported. The OPI reviews a sample of student records as part of its compliance monitoring activities to determine if children referred by a Part C Service Provider Agency have an IEP in place at the age of three. A review of student records is to identify noncompliance issues with respect to 34 CFR 300.111 Child Find or 34 CFR 300.124 Transition of children from the Part C program to preschool programs.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0454 Whitehall H S

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

0454 Whitehall H S

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	13	2	0.15 (15%)	0.01069	0.7522	0.058 (5.8%)	Met

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

0454 Whitehall H S

INDICATOR #3 - Statewide Assessments

Participation and performance of children with disabilities on statewide assessments:

3A. Has District met the state's AYP objectives for progress for disability subgroup?

3B. Participation rate for children with IEPs in statewide assessments.

3C. Proficiency rate for children with IEPs against grade-level standards and alternate achievement standards.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 3A	Assessment -- Meeting AYP Objectives	*	*	*	*	*	*	*
Indicator 3B	Assessment -- Participation Rates	*	*	*	*	*	*	*
Indicator 3C	Assessment -- Proficiency Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

0454 Whitehall H S

INDICATOR #4 - Suspension and Expulsion Rates

Districts who have been identified as having a significant discrepancy in long-term suspension and expulsion rates.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 4A	Suspension and Expulsion Rates	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

OPI School Discipline Data Collection reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The assessment of a school district's performance based on long-term suspension and expulsion rates is done by comparing the suspension and expulsion rates for students with disabilities to the long-term suspension and expulsion rates for nondisabled students. Long-term suspension or expulsion is defined as a suspension or expulsion that results in removal of a student, out-of-school, for greater than 10 school days or a student with multiple short-term (10 school days or less) out-of-school suspensions or expulsions that sum to greater than 10 school days during the school year.

For each racial/ethnic group, a statistical test of the difference between proportions is conducted to determine if the size of difference between the school district's special education long-term suspension and expulsion rates and the long-term suspension and expulsion rates for regular education students in the school district is statistically significant. In our comparison of long-term suspension and expulsion rates, we have set a .05 level of significance. This means, we are 95 percent confident that the differences between the rates are real (significant) and not due to random factors. However, the precision and reliability of this method is dependent upon having a large enough sample size to be representative of the school district's population and so, we also employ a minimum sample size (minimum N) of 10.

If the difference between the long-term suspension and expulsion rates for students with disabilities and the rates for nondisabled students by race/ethnicity group is statistically significant for a specific school district, the school district is flagged for additional investigation to determine if a significant discrepancy is occurring in the rates of long-term suspensions and expulsions of students with disabilities in a school year. This includes validation of the school district's long-term suspension and expulsion data and a systematic review of complaints/mediation/due process information, compliance monitoring and program data.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

0454 Whitehall H S

INDICATOR #5 - Education Environment Rates

Percent of children with IEPs, aged 6-21,

5A. Removed from the regular class less than 21% of the school day.

5B. Removed from regular class greater than 60% of the day; or

5C. Served in public or private separate schools, residential placements, or homebound or hospital placements.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 5A	Education Environment Rate -- Reg Class > 80% of day	13	6	0.46 (46%)	0.16469	0.78839	0.5 (50%)	Met
Indicator 5B	Education Environment Rate -- Reg Class < 40% of day	13	1	0.08 (8%)	0.00139	0.82377	0.12 (12%)	Met
Indicator 5C	Education Environment Rate -- Sep Schls	13	0	0 (0%)	0	0	0.018 (1.8%)	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

0454 Whitehall H S

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0454 Whitehall H S

INDICATOR #12 - Children Referred By Part C

Percent of children referred by Part C, prior to age 3, who are found eligible for Part B, and who have an IEP developed and implemented by their third birthday.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 12	Children referred by Part C	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI Compliance Monitoring

Indicator Data Note:

NA = Data not available as district was not monitored in the year in which data is being reported.

District performance for this indicator is only for districts monitored in the year in which data is being reported. The OPI reviews a sample of student records as part of its compliance monitoring activities to determine if children referred by a Part C Service Provider Agency have an IEP in place at the age of three. A review of student records is to identify noncompliance issues with respect to 34 CFR 300.111 Child Find or 34 CFR 300.124 Transition of children from the Part C program to preschool programs.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0663 Whitewater K-12 Schools

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0663 Whitewater K-12 Schools

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0663 Whitewater K-12 Schools

INDICATOR #3 - Statewide Assessments

Participation and performance of children with disabilities on statewide assessments:

3A. Has District met the state's AYP objectives for progress for disability subgroup?

3B. Participation rate for children with IEPs in statewide assessments.

3C. Proficiency rate for children with IEPs against grade-level standards and alternate achievement standards.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 3A	Assessment -- Meeting AYP Objectives	*	*	*	*	*	*	*
Indicator 3B	Assessment -- Participation Rates	*	*	*	*	*	*	*
Indicator 3C	Assessment -- Proficiency Rates	*	*	*	*	*	*	*

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0663 Whitewater K-12 Schools

INDICATOR #4 - Suspension and Expulsion Rates

Districts who have been identified as having a significant discrepancy in long-term suspension and expulsion rates.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 4A	Suspension and Expulsion Rates	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

OPI School Discipline Data Collection reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The assessment of a school district's performance based on long-term suspension and expulsion rates is done by comparing the suspension and expulsion rates for students with disabilities to the long-term suspension and expulsion rates for nondisabled students. Long-term suspension or expulsion is defined as a suspension or expulsion that results in removal of a student, out-of-school, for greater than 10 school days or a student with multiple short-term (10 school days or less) out-of-school suspensions or expulsions that sum to greater than 10 school days during the school year.

For each racial/ethnic group, a statistical test of the difference between proportions is conducted to determine if the size of difference between the school district's special education long-term suspension and expulsion rates and the long-term suspension and expulsion rates for regular education students in the school district is statistically significant. In our comparison of long-term suspension and expulsion rates, we have set a .05 level of significance. This means, we are 95 percent confident that the differences between the rates are real (significant) and not due to random factors. However, the precision and reliability of this method is dependent upon having a large enough sample size to be representative of the school district's population and so, we also employ a minimum sample size (minimum N) of 10.

If the difference between the long-term suspension and expulsion rates for students with disabilities and the rates for nondisabled students by race/ethnicity group is statistically significant for a specific school district, the school district is flagged for additional investigation to determine if a significant discrepancy is occurring in the rates of long-term suspensions and expulsions of students with disabilities in a school year. This includes validation of the school district's long-term suspension and expulsion data and a systematic review of complaints/mediation/due process information, compliance monitoring and program data.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0663 Whitewater K-12 Schools

INDICATOR #5 - Education Environment Rates

Percent of children with IEPs, aged 6-21,

5A. Removed from the regular class less than 21% of the school day.

5B. Removed from regular class greater than 60% of the day; or

5C. Served in public or private separate schools, residential placements, or homebound or hospital placements.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 5A	Education Environment Rate -- Reg Class > 80% of day	*	*	*	*	*	*	*
Indicator 5B	Education Environment Rate -- Reg Class < 40% of day	*	*	*	*	*	*	*
Indicator 5C	Education Environment Rate -- Sep Schls	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0663 Whitewater K-12 Schools

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0663 Whitewater K-12 Schools

INDICATOR #12 - Children Referred By Part C

Percent of children referred by Part C, prior to age 3, who are found eligible for Part B, and who have an IEP developed and implemented by their third birthday.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 12	Children referred by Part C	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI Compliance Monitoring

Indicator Data Note:

NA = Data not available as district was not monitored in the year in which data is being reported.

District performance for this indicator is only for districts monitored in the year in which data is being reported. The OPI reviews a sample of student records as part of its compliance monitoring activities to determine if children referred by a Part C Service Provider Agency have an IEP in place at the age of three. A review of student records is to identify noncompliance issues with respect to 34 CFR 300.111 Child Find or 34 CFR 300.124 Transition of children from the Part C program to preschool programs.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0506 Whitlash Elem

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0506 Whitlash Elem

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0506 Whitlash Elem

INDICATOR #3 - Statewide Assessments

Participation and performance of children with disabilities on statewide assessments:

3A. Has District met the state's AYP objectives for progress for disability subgroup?

3B. Participation rate for children with IEPs in statewide assessments.

3C. Proficiency rate for children with IEPs against grade-level standards and alternate achievement standards.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 3A	Assessment -- Meeting AYP Objectives	*	*	*	*	*	*	*
Indicator 3B	Assessment -- Participation Rates	*	*	*	*	*	*	*
Indicator 3C	Assessment -- Proficiency Rates	*	*	*	*	*	*	*

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0506 Whitlash Elem

INDICATOR #4 - Suspension and Expulsion Rates

Districts who have been identified as having a significant discrepancy in long-term suspension and expulsion rates.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 4A	Suspension and Expulsion Rates	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

OPI School Discipline Data Collection reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The assessment of a school district's performance based on long-term suspension and expulsion rates is done by comparing the suspension and expulsion rates for students with disabilities to the long-term suspension and expulsion rates for nondisabled students. Long-term suspension or expulsion is defined as a suspension or expulsion that results in removal of a student, out-of-school, for greater than 10 school days or a student with multiple short-term (10 school days or less) out-of-school suspensions or expulsions that sum to greater than 10 school days during the school year.

For each racial/ethnic group, a statistical test of the difference between proportions is conducted to determine if the size of difference between the school district's special education long-term suspension and expulsion rates and the long-term suspension and expulsion rates for regular education students in the school district is statistically significant. In our comparison of long-term suspension and expulsion rates, we have set a .05 level of significance. This means, we are 95 percent confident that the differences between the rates are real (significant) and not due to random factors. However, the precision and reliability of this method is dependent upon having a large enough sample size to be representative of the school district's population and so, we also employ a minimum sample size (minimum N) of 10.

If the difference between the long-term suspension and expulsion rates for students with disabilities and the rates for nondisabled students by race/ethnicity group is statistically significant for a specific school district, the school district is flagged for additional investigation to determine if a significant discrepancy is occurring in the rates of long-term suspensions and expulsions of students with disabilities in a school year. This includes validation of the school district's long-term suspension and expulsion data and a systematic review of complaints/mediation/due process information, compliance monitoring and program data.

Indicator 5B	Education Environment Rate -- Reg Class < 40% of day	*	*	*	*	*	*	*
Indicator 5C	Education Environment Rate -- Sep Schls	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0506 Whitlash Elem

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

Linda McCulloch, Superintendent
Montana Office of Public Instruction

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0506 Whitlash Elem

INDICATOR #12 - Children Referred By Part C

Percent of children referred by Part C, prior to age 3, who are found eligible for Part B, and who have an IEP developed and implemented by their third birthday.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 12	Children referred by Part C	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI Compliance Monitoring

Indicator Data Note:

NA = Data not available as district was not monitored in the year in which data is being reported.

District performance for this indicator is only for districts monitored in the year in which data is being reported. The OPI reviews a sample of student records as part of its compliance monitoring activities to determine if children referred by a Part C Service Provider Agency have an IEP in place at the age of three. A review of student records is to identify noncompliance issues with respect to 34 CFR 300.111 Child Find or 34 CFR 300.124 Transition of children from the Part C program to preschool programs.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0964 Wibaux K-12 Schools

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0964 Wibaux K-12 Schools

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0964 Wibaux K-12 Schools

INDICATOR #3 - Statewide Assessments

Participation and performance of children with disabilities on statewide assessments:

3A. Has District met the state's AYP objectives for progress for disability subgroup?

3B. Participation rate for children with IEPs in statewide assessments.

3C. Proficiency rate for children with IEPs against grade-level standards and alternate achievement standards.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 3A	Assessment -- Meeting AYP Objectives	*	*	*	*	*	*	*
Indicator 3B	Assessment -- Participation Rates	18	18	1 (100%)	0.82416	1.00002	0.98 (98%)	Met
Indicator 3C	Assessment -- Proficiency Rates	18	12	0.67 (67%)	0.39062	0.86191	0.295 (29.5%)	Met

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0964 Wibaux K-12 Schools

INDICATOR #4 - Suspension and Expulsion Rates

Districts who have been identified as having a significant discrepancy in long-term suspension and expulsion rates.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 4A	Suspension and Expulsion Rates	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

OPI School Discipline Data Collection reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The assessment of a school district's performance based on long-term suspension and expulsion rates is done by comparing the suspension and expulsion rates for students with disabilities to the long-term suspension and expulsion rates for nondisabled students. Long-term suspension or expulsion is defined as a suspension or expulsion that results in removal of a student, out-of-school, for greater than 10 school days or a student with multiple short-term (10 school days or less) out-of-school suspensions or expulsions that sum to greater than 10 school days during the school year.

For each racial/ethnic group, a statistical test of the difference between proportions is conducted to determine if the size of difference between the school district's special education long-term suspension and expulsion rates and the long-term suspension and expulsion rates for regular education students in the school district is statistically significant. In our comparison of long-term suspension and expulsion rates, we have set a .05 level of significance. This means, we are 95 percent confident that the differences between the rates are real (significant) and not due to random factors. However, the precision and reliability of this method is dependent upon having a large enough sample size to be representative of the school district's population and so, we also employ a minimum sample size (minimum N) of 10.

If the difference between the long-term suspension and expulsion rates for students with disabilities and the rates for nondisabled students by race/ethnicity group is statistically significant for a specific school district, the school district is flagged for additional investigation to determine if a significant discrepancy is occurring in the rates of long-term suspensions and expulsions of students with disabilities in a school year. This includes validation of the school district's long-term suspension and expulsion data and a systematic review of complaints/mediation/due process information, compliance monitoring and program data.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0964 Wibaux K-12 Schools

INDICATOR #5 - Education Environment Rates

Percent of children with IEPs, aged 6-21,

5A. Removed from the regular class less than 21% of the school day.

5B. Removed from regular class greater than 60% of the day; or

5C. Served in public or private separate schools, residential placements, or homebound or hospital placements.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 5A	Education Environment Rate -- Reg Class > 80% of day	13	12	0.92 (92%)	0.65394	0.98707	0.5 (50%)	Met
Indicator 5B	Education Environment Rate -- Reg Class < 40% of day	13	0	0 (0%)	0	0	0.12 (12%)	Met
Indicator 5C	Education Environment Rate -- Sep Schls	13	0	0 (0%)	0	0	0.018 (1.8%)	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

0964 Wibaux K-12 Schools

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0964 Wibaux K-12 Schools

INDICATOR #12 - Children Referred By Part C

Percent of children referred by Part C, prior to age 3, who are found eligible for Part B, and who have an IEP developed and implemented by their third birthday.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 12	Children referred by Part C	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI Compliance Monitoring

Indicator Data Note:

NA = Data not available as district was not monitored in the year in which data is being reported.

District performance for this indicator is only for districts monitored in the year in which data is being reported. The OPI reviews a sample of student records as part of its compliance monitoring activities to determine if children referred by a Part C Service Provider Agency have an IEP in place at the age of three. A review of student records is to identify noncompliance issues with respect to 34 CFR 300.111 Child Find or 34 CFR 300.124 Transition of children from the Part C program to preschool programs.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0354 Willow Creek Elem

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

0354 Willow Creek Elem

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

INDICATOR #3 - Statewide Assessments

Participation and performance of children with disabilities on statewide assessments:

3A. Has District met the state's AYP objectives for progress for disability subgroup?

3B. Participation rate for children with IEPs in statewide assessments.

3C. Proficiency rate for children with IEPs against grade-level standards and alternate achievement standards.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 3A	Assessment -- Meeting AYP Objectives	*	*	*	*	*	*	*
Indicator 3B	Assessment -- Participation Rates	*	*	*	*	*	*	*
Indicator 3C	Assessment -- Proficiency Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

0354 Willow Creek Elem

INDICATOR #4 - Suspension and Expulsion Rates

Districts who have been identified as having a significant discrepancy in long-term suspension and expulsion rates.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 4A	Suspension and Expulsion Rates	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

OPI School Discipline Data Collection reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The assessment of a school district's performance based on long-term suspension and expulsion rates is done by comparing the suspension and expulsion rates for students with disabilities to the long-term suspension and expulsion rates for nondisabled students. Long-term suspension or expulsion is defined as a suspension or expulsion that results in removal of a student, out-of-school, for greater than 10 school days or a student with multiple short-term (10 school days or less) out-of-school suspensions or expulsions that sum to greater than 10 school days during the school year.

For each racial/ethnic group, a statistical test of the difference between proportions is conducted to determine if the size of difference between the school district's special education long-term suspension and expulsion rates and the long-term suspension and expulsion rates for regular education students in the school district is statistically significant. In our comparison of long-term suspension and expulsion rates, we have set a .05 level of significance. This means, we are 95 percent confident that the differences between the rates are real (significant) and not due to random factors. However, the precision and reliability of this method is dependent upon having a large enough sample size to be representative of the school district's population and so, we also employ a minimum sample size (minimum N) of 10.

If the difference between the long-term suspension and expulsion rates for students with disabilities and the rates for nondisabled students by race/ethnicity group is statistically significant for a specific school district, the school district is flagged for additional investigation to determine if a significant discrepancy is occurring in the rates of long-term suspensions and expulsions of students with disabilities in a school year. This includes validation of the school district's long-term suspension and expulsion data and a systematic review of complaints/mediation/due process information, compliance monitoring and program data.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

0354 Willow Creek Elem

INDICATOR #5 - Education Environment Rates

Percent of children with IEPs, aged 6-21,

5A. Removed from the regular class less than 21% of the school day.

5B. Removed from regular class greater than 60% of the day; or

5C. Served in public or private separate schools, residential placements, or homebound or hospital placements.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 5A	Education Environment Rate -- Reg Class > 80% of day	*	*	*	*	*	*	*
Indicator 5B	Education Environment Rate -- Reg Class < 40% of day	*	*	*	*	*	*	*
Indicator 5C	Education Environment Rate -- Sep Schls	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0354 Willow Creek Elem

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0354 Willow Creek Elem

INDICATOR #12 - Children Referred By Part C

Percent of children referred by Part C, prior to age 3, who are found eligible for Part B, and who have an IEP developed and implemented by their third birthday.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 12	Children referred by Part C	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI Compliance Monitoring

Indicator Data Note:

NA = Data not available as district was not monitored in the year in which data is being reported.

District performance for this indicator is only for districts monitored in the year in which data is being reported. The OPI reviews a sample of student records as part of its compliance monitoring activities to determine if children referred by a Part C Service Provider Agency have an IEP in place at the age of three. A review of student records is to identify noncompliance issues with respect to 34 CFR 300.111 Child Find or 34 CFR 300.124 Transition of children from the Part C program to preschool programs.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0355 Willow Creek H S

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

0355 Willow Creek H S

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

0355 Willow Creek H S

INDICATOR #3 - Statewide Assessments

Participation and performance of children with disabilities on statewide assessments:

3A. Has District met the state's AYP objectives for progress for disability subgroup?

3B. Participation rate for children with IEPs in statewide assessments.

3C. Proficiency rate for children with IEPs against grade-level standards and alternate achievement standards.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 3A	Assessment -- Meeting AYP Objectives	NA	NA	NA	NA	NA	NA	NA
Indicator 3B	Assessment -- Participation Rates	NA	NA	NA	NA	NA	NA	NA
Indicator 3C	Assessment -- Proficiency Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0355 Willow Creek H S

INDICATOR #4 - Suspension and Expulsion Rates

Districts who have been identified as having a significant discrepancy in long-term suspension and expulsion rates.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 4A	Suspension and Expulsion Rates	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

OPI School Discipline Data Collection reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The assessment of a school district's performance based on long-term suspension and expulsion rates is done by comparing the suspension and expulsion rates for students with disabilities to the long-term suspension and expulsion rates for nondisabled students. Long-term suspension or expulsion is defined as a suspension or expulsion that results in removal of a student, out-of-school, for greater than 10 school days or a student with multiple short-term (10 school days or less) out-of-school suspensions or expulsions that sum to greater than 10 school days during the school year.

For each racial/ethnic group, a statistical test of the difference between proportions is conducted to determine if the size of difference between the school district's special education long-term suspension and expulsion rates and the long-term suspension and expulsion rates for regular education students in the school district is statistically significant. In our comparison of long-term suspension and expulsion rates, we have set a .05 level of significance. This means, we are 95 percent confident that the differences between the rates are real (significant) and not due to random factors. However, the precision and reliability of this method is dependent upon having a large enough sample size to be representative of the school district's population and so, we also employ a minimum sample size (minimum N) of 10.

If the difference between the long-term suspension and expulsion rates for students with disabilities and the rates for nondisabled students by race/ethnicity group is statistically significant for a specific school district, the school district is flagged for additional investigation to determine if a significant discrepancy is occurring in the rates of long-term suspensions and expulsions of students with disabilities in a school year. This includes validation of the school district's long-term suspension and expulsion data and a systematic review of complaints/mediation/due process information, compliance monitoring and program data.

Indicator 5B	Education Environment Rate -- Reg Class < 40% of day	*	*	*	*	*	*	*
Indicator 5C	Education Environment Rate -- Sep Schls	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

0355 Willow Creek H S

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0355 Willow Creek H S

INDICATOR #12 - Children Referred By Part C

Percent of children referred by Part C, prior to age 3, who are found eligible for Part B, and who have an IEP developed and implemented by their third birthday.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 12	Children referred by Part C	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI Compliance Monitoring

Indicator Data Note:

NA = Data not available as district was not monitored in the year in which data is being reported.

District performance for this indicator is only for districts monitored in the year in which data is being reported. The OPI reviews a sample of student records as part of its compliance monitoring activities to determine if children referred by a Part C Service Provider Agency have an IEP in place at the age of three. A review of student records is to identify noncompliance issues with respect to 34 CFR 300.111 Child Find or 34 CFR 300.124 Transition of children from the Part C program to preschool programs.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0291 Winifred K-12 Schools

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0291 Winifred K-12 Schools

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

0291 Winifred K-12 Schools

INDICATOR #3 - Statewide Assessments

Participation and performance of children with disabilities on statewide assessments:

3A. Has District met the state's AYP objectives for progress for disability subgroup?

3B. Participation rate for children with IEPs in statewide assessments.

3C. Proficiency rate for children with IEPs against grade-level standards and alternate achievement standards.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 3A	Assessment -- Meeting AYP Objectives	*	*	*	*	*	*	*
Indicator 3B	Assessment -- Participation Rates	*	*	*	*	*	*	*
Indicator 3C	Assessment -- Proficiency Rates	*	*	*	*	*	*	*

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0291 Winifred K-12 Schools

INDICATOR #4 - Suspension and Expulsion Rates

Districts who have been identified as having a significant discrepancy in long-term suspension and expulsion rates.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 4A	Suspension and Expulsion Rates	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

OPI School Discipline Data Collection reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The assessment of a school district's performance based on long-term suspension and expulsion rates is done by comparing the suspension and expulsion rates for students with disabilities to the long-term suspension and expulsion rates for nondisabled students. Long-term suspension or expulsion is defined as a suspension or expulsion that results in removal of a student, out-of-school, for greater than 10 school days or a student with multiple short-term (10 school days or less) out-of-school suspensions or expulsions that sum to greater than 10 school days during the school year.

For each racial/ethnic group, a statistical test of the difference between proportions is conducted to determine if the size of difference between the school district's special education long-term suspension and expulsion rates and the long-term suspension and expulsion rates for regular education students in the school district is statistically significant. In our comparison of long-term suspension and expulsion rates, we have set a .05 level of significance. This means, we are 95 percent confident that the differences between the rates are real (significant) and not due to random factors. However, the precision and reliability of this method is dependent upon having a large enough sample size to be representative of the school district's population and so, we also employ a minimum sample size (minimum N) of 10.

If the difference between the long-term suspension and expulsion rates for students with disabilities and the rates for nondisabled students by race/ethnicity group is statistically significant for a specific school district, the school district is flagged for additional investigation to determine if a significant discrepancy is occurring in the rates of long-term suspensions and expulsions of students with disabilities in a school year. This includes validation of the school district's long-term suspension and expulsion data and a systematic review of complaints/mediation/due process information, compliance monitoring and program data.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0291 Winifred K-12 Schools

INDICATOR #5 - Education Environment Rates

Percent of children with IEPs, aged 6-21,

5A. Removed from the regular class less than 21% of the school day.

5B. Removed from regular class greater than 60% of the day; or

5C. Served in public or private separate schools, residential placements, or homebound or hospital placements.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 5A	Education Environment Rate -- Reg Class > 80% of day	15	12	0.8 (80%)	0.51728	0.93726	0.5 (50%)	Met
Indicator 5B	Education Environment Rate -- Reg Class < 40% of day	15	0	0 (0%)	0	0	0.12 (12%)	Met
Indicator 5C	Education Environment Rate -- Sep Schls	15	0	0 (0%)	0	0	0.018 (1.8%)	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0291 Winifred K-12 Schools

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

OPI Compliance Monitoring

Indicator Data Note:

NA = Data not available as district was not monitored in the year in which data is being reported.

District performance for this indicator is only for districts monitored in the year in which data is being reported. The OPI reviews a sample of student records as part of its compliance monitoring activities to determine if children referred by a Part C Service Provider Agency have an IEP in place at the age of three. A review of student records is to identify noncompliance issues with respect to 34 CFR 300.111 Child Find or 34 CFR 300.124 Transition of children from the Part C program to preschool programs.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0642 Winnett K-12 Schools

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0642 Winnett K-12 Schools

INDICATOR #3 - Statewide Assessments

Participation and performance of children with disabilities on statewide assessments:

3A. Has District met the state's AYP objectives for progress for disability subgroup?

3B. Participation rate for children with IEPs in statewide assessments.

3C. Proficiency rate for children with IEPs against grade-level standards and alternate achievement standards.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 3A	Assessment -- Meeting AYP Objectives	*	*	*	*	*	*	*
Indicator 3B	Assessment -- Participation Rates	14	14	1 (100%)	0.78473	1.00002	0.98 (98%)	Met
Indicator 3C	Assessment -- Proficiency Rates	*	*	*	*	*	*	*

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0642 Winnett K-12 Schools

INDICATOR #4 - Suspension and Expulsion Rates

Districts who have been identified as having a significant discrepancy in long-term suspension and expulsion rates.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 4A	Suspension and Expulsion Rates	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

OPI School Discipline Data Collection reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The assessment of a school district's performance based on long-term suspension and expulsion rates is done by comparing the suspension and expulsion rates for students with disabilities to the long-term suspension and expulsion rates for nondisabled students. Long-term suspension or expulsion is defined as a suspension or expulsion that results in removal of a student, out-of-school, for greater than 10 school days or a student with multiple short-term (10 school days or less) out-of-school suspensions or expulsions that sum to greater than 10 school days during the school year.

For each racial/ethnic group, a statistical test of the difference between proportions is conducted to determine if the size of difference between the school district's special education long-term suspension and expulsion rates and the long-term suspension and expulsion rates for regular education students in the school district is statistically significant. In our comparison of long-term suspension and expulsion rates, we have set a .05 level of significance. This means, we are 95 percent confident that the differences between the rates are real (significant) and not due to random factors. However, the precision and reliability of this method is dependent upon having a large enough sample size to be representative of the school district's population and so, we also employ a minimum sample size (minimum N) of 10.

If the difference between the long-term suspension and expulsion rates for students with disabilities and the rates for nondisabled students by race/ethnicity group is statistically significant for a specific school district, the school district is flagged for additional investigation to determine if a significant discrepancy is occurring in the rates of long-term suspensions and expulsions of students with disabilities in a school year. This includes validation of the school district's long-term suspension and expulsion data and a systematic review of complaints/mediation/due process information, compliance monitoring and program data.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0642 Winnett K-12 Schools

INDICATOR #5 - Education Environment Rates

Percent of children with IEPs, aged 6-21,

5A. Removed from the regular class less than 21% of the school day.

5B. Removed from regular class greater than 60% of the day; or

5C. Served in public or private separate schools, residential placements, or homebound or hospital placements.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 5A	Education Environment Rate -- Reg Class > 80% of day	*	*	*	*	*	*	*
Indicator 5B	Education Environment Rate -- Reg Class < 40% of day	*	*	*	*	*	*	*
Indicator 5C	Education Environment Rate -- Sep Schls	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

0642 Winnett K-12 Schools

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0642 Winnett K-12 Schools

INDICATOR #12 - Children Referred By Part C

Percent of children referred by Part C, prior to age 3, who are found eligible for Part B, and who have an IEP developed and implemented by their third birthday.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 12	Children referred by Part C	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI Compliance Monitoring

Indicator Data Note:

NA = Data not available as district was not monitored in the year in which data is being reported.

District performance for this indicator is only for districts monitored in the year in which data is being reported. The OPI reviews a sample of student records as part of its compliance monitoring activities to determine if children referred by a Part C Service Provider Agency have an IEP in place at the age of three. A review of student records is to identify noncompliance issues with respect to 34 CFR 300.111 Child Find or 34 CFR 300.124 Transition of children from the Part C program to preschool programs.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0010 Wisdom Elem

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0010 Wisdom Elem

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

INDICATOR #3 - Statewide Assessments

Participation and performance of children with disabilities on statewide assessments:

3A. Has District met the state's AYP objectives for progress for disability subgroup?

3B. Participation rate for children with IEPs in statewide assessments.

3C. Proficiency rate for children with IEPs against grade-level standards and alternate achievement standards.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 3A	Assessment -- Meeting AYP Objectives	*	*	*	*	*	*	*
Indicator 3B	Assessment -- Participation Rates	*	*	*	*	*	*	*
Indicator 3C	Assessment -- Proficiency Rates	*	*	*	*	*	*	*

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

5A. Removed from the regular class less than 21% of the school day.

5B. Removed from regular class greater than 60% of the day; or

5C. Served in public or private separate schools, residential placements, or homebound or hospital placements.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 5A	Education Environment Rate -- Reg Class > 80% of day	*	*	*	*	*	*	*
Indicator 5B	Education Environment Rate -- Reg Class < 40% of day	*	*	*	*	*	*	*
Indicator 5C	Education Environment Rate -- Sep Schls	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

0010 Wisdom Elem

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0010 Wisdom Elem

INDICATOR #12 - Children Referred By Part C

Percent of children referred by Part C, prior to age 3, who are found eligible for Part B, and who have an IEP developed and implemented by their third birthday.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 12	Children referred by Part C	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI Compliance Monitoring

Indicator Data Note:

NA = Data not available as district was not monitored in the year in which data is being reported.

District performance for this indicator is only for districts monitored in the year in which data is being reported. The OPI reviews a sample of student records as part of its compliance monitoring activities to determine if children referred by a Part C Service Provider Agency have an IEP in place at the age of three. A review of student records is to identify noncompliance issues with respect to 34 CFR 300.111 Child Find or 34 CFR 300.124 Transition of children from the Part C program to preschool programs.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0007 Wise River Elem

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0007 Wise River Elem

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

0007 Wise River Elem

INDICATOR #3 - Statewide Assessments

Participation and performance of children with disabilities on statewide assessments:

3A. Has District met the state's AYP objectives for progress for disability subgroup?

3B. Participation rate for children with IEPs in statewide assessments.

3C. Proficiency rate for children with IEPs against grade-level standards and alternate achievement standards.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 3A	Assessment -- Meeting AYP Objectives	NA	NA	NA	NA	NA	NA	NA
Indicator 3B	Assessment -- Participation Rates	NA	NA	NA	NA	NA	NA	NA
Indicator 3C	Assessment -- Proficiency Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0007 Wise River Elem

INDICATOR #4 - Suspension and Expulsion Rates

Districts who have been identified as having a significant discrepancy in long-term suspension and expulsion rates.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 4A	Suspension and Expulsion Rates	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

OPI School Discipline Data Collection reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The assessment of a school district's performance based on long-term suspension and expulsion rates is done by comparing the suspension and expulsion rates for students with disabilities to the long-term suspension and expulsion rates for nondisabled students. Long-term suspension or expulsion is defined as a suspension or expulsion that results in removal of a student, out-of-school, for greater than 10 school days or a student with multiple short-term (10 school days or less) out-of-school suspensions or expulsions that sum to greater than 10 school days during the school year.

For each racial/ethnic group, a statistical test of the difference between proportions is conducted to determine if the size of difference between the school district's special education long-term suspension and expulsion rates and the long-term suspension and expulsion rates for regular education students in the school district is statistically significant. In our comparison of long-term suspension and expulsion rates, we have set a .05 level of significance. This means, we are 95 percent confident that the differences between the rates are real (significant) and not due to random factors. However, the precision and reliability of this method is dependent upon having a large enough sample size to be representative of the school district's population and so, we also employ a minimum sample size (minimum N) of 10.

If the difference between the long-term suspension and expulsion rates for students with disabilities and the rates for nondisabled students by race/ethnicity group is statistically significant for a specific school district, the school district is flagged for additional investigation to determine if a significant discrepancy is occurring in the rates of long-term suspensions and expulsions of students with disabilities in a school year. This includes validation of the school district's long-term suspension and expulsion data and a systematic review of complaints/mediation/due process information, compliance monitoring and program data.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0007 Wise River Elem

INDICATOR #5 - Education Environment Rates

Percent of children with IEPs, aged 6-21,

5A. Removed from the regular class less than 21% of the school day.

5B. Removed from regular class greater than 60% of the day; or

5C. Served in public or private separate schools, residential placements, or homebound or hospital placements.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 5A	Education Environment Rate -- Reg Class > 80% of day	*	*	*	*	*	*	*
Indicator 5B	Education Environment Rate -- Reg Class < 40% of day	*	*	*	*	*	*	*
Indicator 5C	Education Environment Rate -- Sep Schls	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For School Year: 2005-2006

District Name 0007 Wise River Elem

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

District Name 0495 Wolf Creek Elem

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0495 Wolf Creek Elem

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0495 Wolf Creek Elem

INDICATOR #3 - Statewide Assessments

Participation and performance of children with disabilities on statewide assessments:

3A. Has District met the state's AYP objectives for progress for disability subgroup?

3B. Participation rate for children with IEPs in statewide assessments.

3C. Proficiency rate for children with IEPs against grade-level standards and alternate achievement standards.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 3A	Assessment -- Meeting AYP Objectives	*	*	*	*	*	*	*
Indicator 3B	Assessment -- Participation Rates	NA	NA	NA	NA	NA	NA	NA
Indicator 3C	Assessment -- Proficiency Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0495 Wolf Creek Elem

INDICATOR #4 - Suspension and Expulsion Rates

Districts who have been identified as having a significant discrepancy in long-term suspension and expulsion rates.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 4A	Suspension and Expulsion Rates	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

OPI School Discipline Data Collection reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The assessment of a school district's performance based on long-term suspension and expulsion rates is done by comparing the suspension and expulsion rates for students with disabilities to the long-term suspension and expulsion rates for nondisabled students. Long-term suspension or expulsion is defined as a suspension or expulsion that results in removal of a student, out-of-school, for greater than 10 school days or a student with multiple short-term (10 school days or less) out-of-school suspensions or expulsions that sum to greater than 10 school days during the school year.

For each racial/ethnic group, a statistical test of the difference between proportions is conducted to determine if the size of difference between the school district's special education long-term suspension and expulsion rates and the long-term suspension and expulsion rates for regular education students in the school district is statistically significant. In our comparison of long-term suspension and expulsion rates, we have set a .05 level of significance. This means, we are 95 percent confident that the differences between the rates are real (significant) and not due to random factors. However, the precision and reliability of this method is dependent upon having a large enough sample size to be representative of the school district's population and so, we also employ a minimum sample size (minimum N) of 10.

If the difference between the long-term suspension and expulsion rates for students with disabilities and the rates for nondisabled students by race/ethnicity group is statistically significant for a specific school district, the school district is flagged for additional investigation to determine if a significant discrepancy is occurring in the rates of long-term suspensions and expulsions of students with disabilities in a school year. This includes validation of the school district's long-term suspension and expulsion data and a systematic review of complaints/mediation/due process information, compliance monitoring and program data.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

0495 Wolf Creek Elem

INDICATOR #5 - Education Environment Rates

Percent of children with IEPs, aged 6-21,

5A. Removed from the regular class less than 21% of the school day.

5B. Removed from regular class greater than 60% of the day; or

5C. Served in public or private separate schools, residential placements, or homebound or hospital placements.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 5A	Education Environment Rate -- Reg Class > 80% of day	*	*	*	*	*	*	*
Indicator 5B	Education Environment Rate -- Reg Class < 40% of day	*	*	*	*	*	*	*
Indicator 5C	Education Environment Rate -- Sep Schls	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0495 Wolf Creek Elem

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0495 Wolf Creek Elem

INDICATOR #12 - Children Referred By Part C

Percent of children referred by Part C, prior to age 3, who are found eligible for Part B, and who have an IEP developed and implemented by their third birthday.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 12	Children referred by Part C	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI Compliance Monitoring

Indicator Data Note:

NA = Data not available as district was not monitored in the year in which data is being reported.

District performance for this indicator is only for districts monitored in the year in which data is being reported. The OPI reviews a sample of student records as part of its compliance monitoring activities to determine if children referred by a Part C Service Provider Agency have an IEP in place at the age of three. A review of student records is to identify noncompliance issues with respect to 34 CFR 300.111 Child Find or 34 CFR 300.124 Transition of children from the Part C program to preschool programs.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0780 Wolf Point Elem

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0780 Wolf Point Elem

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0780 Wolf Point Elem

INDICATOR #3 - Statewide Assessments

Participation and performance of children with disabilities on statewide assessments:

3A. Has District met the state's AYP objectives for progress for disability subgroup?

3B. Participation rate for children with IEPs in statewide assessments.

3C. Proficiency rate for children with IEPs against grade-level standards and alternate achievement standards.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 3A	Assessment -- Meeting AYP Objectives			(%)			NA	Not Met
Indicator 3B	Assessment -- Participation Rates	118	116	0.98 (98%)	0.93976	0.99539	0.98 (98%)	Met
Indicator 3C	Assessment -- Proficiency Rates	118	16	0.14 (14%)	0.03978	0.37247	0.295 (29.5%)	Met

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

OPI School Discipline Data Collection reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The assessment of a school district's performance based on long-term suspension and expulsion rates is done by comparing the suspension and expulsion rates for students with disabilities to the long-term suspension and expulsion rates for nondisabled students. Long-term suspension or expulsion is defined as a suspension or expulsion that results in removal of a student, out-of-school, for greater than 10 school days or a student with multiple short-term (10 school days or less) out-of-school suspensions or expulsions that sum to greater than 10 school days during the school year.

For each racial/ethnic group, a statistical test of the difference between proportions is conducted to determine if the size of difference between the school district's special education long-term suspension and expulsion rates and the long-term suspension and expulsion rates for regular education students in the school district is statistically significant. In our comparison of long-term suspension and expulsion rates, we have set a .05 level of significance. This means, we are 95 percent confident that the differences between the rates are real (significant) and not due to random factors. However, the precision and reliability of this method is dependent upon having a large enough sample size to be representative of the school district's population and so, we also employ a minimum sample size (minimum N) of 10.

If the difference between the long-term suspension and expulsion rates for students with disabilities and the rates for nondisabled students by race/ethnicity group is statistically significant for a specific school district, the school district is flagged for additional investigation to determine if a significant discrepancy is occurring in the rates of long-term suspensions and expulsions of students with disabilities in a school year. This includes validation of the school district's long-term suspension and expulsion data and a systematic review of complaints/mediation/due process information, compliance monitoring and program data.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0780 Wolf Point Elem

INDICATOR #5 - Education Environment Rates

Percent of children with IEPs, aged 6-21,

5A. Removed from the regular class less than 21% of the school day.

5B. Removed from regular class greater than 60% of the day; or

5C. Served in public or private separate schools, residential placements, or homebound or hospital placements.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 5A	Education Environment Rate -- Reg Class > 80% of day	93	32	0.34 (34%)	0.20436	0.51722	0.5 (50%)	Met
Indicator 5B	Education Environment Rate -- Reg Class < 40% of day	93	3	0.03 (3%)	0.00071	0.58898	0.12 (12%)	Met
Indicator 5C	Education Environment Rate -- Sep Schls	93	0	0 (0%)	0	0	0.018 (1.8%)	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0780 Wolf Point Elem

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	20	20	1 (100%)	0.8389	1.00001	0.548 (54.8%)	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0780 Wolf Point Elem

INDICATOR #12 - Children Referred By Part C

Percent of children referred by Part C, prior to age 3, who are found eligible for Part B, and who have an IEP developed and implemented by their third birthday.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 12	Children referred by Part C	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI Compliance Monitoring

Indicator Data Note:

NA = Data not available as district was not monitored in the year in which data is being reported.

District performance for this indicator is only for districts monitored in the year in which data is being reported. The OPI reviews a sample of student records as part of its compliance monitoring activities to determine if children referred by a Part C Service Provider Agency have an IEP in place at the age of three. A review of student records is to identify noncompliance issues with respect to 34 CFR 300.111 Child Find or 34 CFR 300.124 Transition of children from the Part C program to preschool programs.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0781 Wolf Point H S

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0781 Wolf Point H S

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	26	4	0.15 (15%)	0.01917	0.6276	0.058 (5.8%)	Met

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0781 Wolf Point H S

INDICATOR #3 - Statewide Assessments

Participation and performance of children with disabilities on statewide assessments:

3A. Has District met the state's AYP objectives for progress for disability subgroup?

3B. Participation rate for children with IEPs in statewide assessments.

3C. Proficiency rate for children with IEPs against grade-level standards and alternate achievement standards.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 3A	Assessment -- Meeting AYP Objectives	*	*	*	*	*	*	*
Indicator 3B	Assessment -- Participation Rates	12	12	1 (100%)	0.75755	1.00003	0.98 (98%)	Met
Indicator 3C	Assessment -- Proficiency Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

INDICATOR #5 - Education Environment Rates

Percent of children with IEPs, aged 6-21,

5A. Removed from the regular class less than 21% of the school day.

5B. Removed from regular class greater than 60% of the day; or

5C. Served in public or private separate schools, residential placements, or homebound or hospital placements.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 5A	Education Environment Rate -- Reg Class > 80% of day	26	13	0.5 (50%)	0.26118	0.73881	0.5 (50%)	Met
Indicator 5B	Education Environment Rate -- Reg Class < 40% of day	26	3	0.12 (12%)	0.00886	0.65375	0.12 (12%)	Met
Indicator 5C	Education Environment Rate -- Sep Schls	26	0	0 (0%)	0	0	0.018 (1.8%)	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0781 Wolf Point H S

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0781 Wolf Point H S

INDICATOR #12 - Children Referred By Part C

Percent of children referred by Part C, prior to age 3, who are found eligible for Part B, and who have an IEP developed and implemented by their third birthday.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 12	Children referred by Part C	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI Compliance Monitoring

Indicator Data Note:

NA = Data not available as district was not monitored in the year in which data is being reported.

District performance for this indicator is only for districts monitored in the year in which data is being reported. The OPI reviews a sample of student records as part of its compliance monitoring activities to determine if children referred by a Part C Service Provider Agency have an IEP in place at the age of three. A review of student records is to identify noncompliance issues with respect to 34 CFR 300.111 Child Find or 34 CFR 300.124 Transition of children from the Part C program to preschool programs.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0591 Woodman Elem

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0591 Woodman Elem

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0591 Woodman Elem

INDICATOR #3 - Statewide Assessments

Participation and performance of children with disabilities on statewide assessments:

3A. Has District met the state's AYP objectives for progress for disability subgroup?

3B. Participation rate for children with IEPs in statewide assessments.

3C. Proficiency rate for children with IEPs against grade-level standards and alternate achievement standards.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 3A	Assessment -- Meeting AYP Objectives	*	*	*	*	*	*	*
Indicator 3B	Assessment -- Participation Rates	*	*	*	*	*	*	*
Indicator 3C	Assessment -- Proficiency Rates	*	*	*	*	*	*	*

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0591 Woodman Elem

INDICATOR #4 - Suspension and Expulsion Rates

Districts who have been identified as having a significant discrepancy in long-term suspension and expulsion rates.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 4A	Suspension and Expulsion Rates	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

OPI School Discipline Data Collection reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The assessment of a school district's performance based on long-term suspension and expulsion rates is done by comparing the suspension and expulsion rates for students with disabilities to the long-term suspension and expulsion rates for nondisabled students. Long-term suspension or expulsion is defined as a suspension or expulsion that results in removal of a student, out-of-school, for greater than 10 school days or a student with multiple short-term (10 school days or less) out-of-school suspensions or expulsions that sum to greater than 10 school days during the school year.

For each racial/ethnic group, a statistical test of the difference between proportions is conducted to determine if the size of difference between the school district's special education long-term suspension and expulsion rates and the long-term suspension and expulsion rates for regular education students in the school district is statistically significant. In our comparison of long-term suspension and expulsion rates, we have set a .05 level of significance. This means, we are 95 percent confident that the differences between the rates are real (significant) and not due to random factors. However, the precision and reliability of this method is dependent upon having a large enough sample size to be representative of the school district's population and so, we also employ a minimum sample size (minimum N) of 10.

If the difference between the long-term suspension and expulsion rates for students with disabilities and the rates for nondisabled students by race/ethnicity group is statistically significant for a specific school district, the school district is flagged for additional investigation to determine if a significant discrepancy is occurring in the rates of long-term suspensions and expulsions of students with disabilities in a school year. This includes validation of the school district's long-term suspension and expulsion data and a systematic review of complaints/mediation/due process information, compliance monitoring and program data.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0591 Woodman Elem

INDICATOR #5 - Education Environment Rates

Percent of children with IEPs, aged 6-21,

5A. Removed from the regular class less than 21% of the school day.

5B. Removed from regular class greater than 60% of the day; or

5C. Served in public or private separate schools, residential placements, or homebound or hospital placements.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 5A	Education Environment Rate -- Reg Class > 80% of day	*	*	*	*	*	*	*
Indicator 5B	Education Environment Rate -- Reg Class < 40% of day	*	*	*	*	*	*	*
Indicator 5C	Education Environment Rate -- Sep Schls	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0591 Woodman Elem

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

Indicator Data Source:

OPI Compliance Monitoring

Indicator Data Note:

NA = Data not available as district was not monitored in the year in which data is being reported.

District performance for this indicator is only for districts monitored in the year in which data is being reported. The OPI reviews a sample of student records as part of its compliance monitoring activities to determine if children referred by a Part C Service Provider Agency have an IEP in place at the age of three. A review of student records is to identify noncompliance issues with respect to 34 CFR 300.111 Child Find or 34 CFR 300.124 Transition of children from the Part C program to preschool programs.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0026 Wyola Elem

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0026 Wyola Elem

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

Indicator 3B	Assessment -- Participation Rates	32	22	0.69 (69%)	0.47876	0.84052	0.98 (98%)	Not Met
Indicator 3C	Assessment -- Proficiency Rates	*	*	*	*	*	*	*

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0026 Wyola Elem

INDICATOR #4 - Suspension and Expulsion Rates

Districts who have been identified as having a significant discrepancy in long-term suspension and expulsion rates.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 4A	Suspension and Expulsion Rates	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

OPI School Discipline Data Collection reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The assessment of a school district's performance based on long-term suspension and expulsion rates is done by comparing the suspension and expulsion rates for students with disabilities to the long-term suspension and expulsion rates for nondisabled students. Long-term suspension or expulsion is defined as a suspension or expulsion that results in removal of a student, out-of-school, for greater than 10 school days or a student with multiple short-term (10 school days or less) out-of-school suspensions or expulsions that sum to greater than 10 school days during the school year.

For each racial/ethnic group, a statistical test of the difference between proportions is conducted to determine if the size of difference between the school district's special education long-term suspension and expulsion rates and the long-term suspension and expulsion rates for regular education students in the school district is statistically significant. In our comparison of long-term suspension and expulsion rates, we have set a .05 level of significance. This means, we are 95 percent confident that the differences between the rates are real (significant) and not due to random factors. However, the precision and reliability of this method is dependent upon having a large enough sample size to be representative of the school district's population and so, we also employ a minimum sample size (minimum N) of 10.

If the difference between the long-term suspension and expulsion rates for students with disabilities and the rates for nondisabled students by race/ethnicity group is statistically significant for a specific school district, the school district is flagged for additional investigation to determine if a significant discrepancy is occurring in the rates of long-term suspensions and expulsions of students with disabilities in a school year. This includes validation of the school district's long-term suspension and expulsion data and a systematic review of complaints/mediation/due process information, compliance monitoring and program data.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

0026 Wyola Elem

INDICATOR #5 - Education Environment Rates

Percent of children with IEPs, aged 6-21,

5A. Removed from the regular class less than 21% of the school day.

5B. Removed from regular class greater than 60% of the day; or

5C. Served in public or private separate schools, residential placements, or homebound or hospital placements.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 5A	Education Environment Rate -- Reg Class > 80% of day	15	15	1 (100%)	0.79615	1.00002	0.5 (50%)	Met
Indicator 5B	Education Environment Rate -- Reg Class < 40% of day	15	0	0 (0%)	0	0	0.12 (12%)	Met
Indicator 5C	Education Environment Rate -- Sep Schls	15	0	0 (0%)	0	0	0.018 (1.8%)	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0026 Wyola Elem

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0026 Wyola Elem

INDICATOR #12 - Children Referred By Part C

Percent of children referred by Part C, prior to age 3, who are found eligible for Part B, and who have an IEP developed and implemented by their third birthday.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 12	Children referred by Part C	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI Compliance Monitoring

Indicator Data Note:

NA = Data not available as district was not monitored in the year in which data is being reported.

District performance for this indicator is only for districts monitored in the year in which data is being reported. The OPI reviews a sample of student records as part of its compliance monitoring activities to determine if children referred by a Part C Service Provider Agency have an IEP in place at the age of three. A review of student records is to identify noncompliance issues with respect to 34 CFR 300.111 Child Find or 34 CFR 300.124 Transition of children from the Part C program to preschool programs.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0533 Yaak Elem

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

0533 Yaak Elem

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

INDICATOR #3 - Statewide Assessments

Participation and performance of children with disabilities on statewide assessments:

3A. Has District met the state's AYP objectives for progress for disability subgroup?

3B. Participation rate for children with IEPs in statewide assessments.

3C. Proficiency rate for children with IEPs against grade-level standards and alternate achievement standards.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 3A	Assessment -- Meeting AYP Objectives	NA	NA	NA	NA	NA	NA	NA
Indicator 3B	Assessment -- Participation Rates	NA	NA	NA	NA	NA	NA	NA
Indicator 3C	Assessment -- Proficiency Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0533 Yaak Elem

INDICATOR #4 - Suspension and Expulsion Rates

Districts who have been identified as having a significant discrepancy in long-term suspension and expulsion rates.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 4A	Suspension and Expulsion Rates	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

OPI School Discipline Data Collection reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The assessment of a school district's performance based on long-term suspension and expulsion rates is done by comparing the suspension and expulsion rates for students with disabilities to the long-term suspension and expulsion rates for nondisabled students. Long-term suspension or expulsion is defined as a suspension or expulsion that results in removal of a student, out-of-school, for greater than 10 school days or a student with multiple short-term (10 school days or less) out-of-school suspensions or expulsions that sum to greater than 10 school days during the school year.

For each racial/ethnic group, a statistical test of the difference between proportions is conducted to determine if the size of difference between the school district's special education long-term suspension and expulsion rates and the long-term suspension and expulsion rates for regular education students in the school district is statistically significant. In our comparison of long-term suspension and expulsion rates, we have set a .05 level of significance. This means, we are 95 percent confident that the differences between the rates are real (significant) and not due to random factors. However, the precision and reliability of this method is dependent upon having a large enough sample size to be representative of the school district's population and so, we also employ a minimum sample size (minimum N) of 10.

If the difference between the long-term suspension and expulsion rates for students with disabilities and the rates for nondisabled students by race/ethnicity group is statistically significant for a specific school district, the school district is flagged for additional investigation to determine if a significant discrepancy is occurring in the rates of long-term suspensions and expulsions of students with disabilities in a school year. This includes validation of the school district's long-term suspension and expulsion data and a systematic review of complaints/mediation/due process information, compliance monitoring and program data.

INDICATOR #5 - Education Environment Rates

Percent of children with IEPs, aged 6-21,

5A. Removed from the regular class less than 21% of the school day.

5B. Removed from regular class greater than 60% of the day; or

5C. Served in public or private separate schools, residential placements, or homebound or hospital placements.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 5A	Education Environment Rate -- Reg Class > 80% of day	*	*	*	*	*	*	*
Indicator 5B	Education Environment Rate -- Reg Class < 40% of day	*	*	*	*	*	*	*
Indicator 5C	Education Environment Rate -- Sep Schls	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

0533 Yaak Elem

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0533 Yaak Elem

INDICATOR #12 - Children Referred By Part C

Percent of children referred by Part C, prior to age 3, who are found eligible for Part B, and who have an IEP developed and implemented by their third birthday.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 12	Children referred by Part C	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI Compliance Monitoring

Indicator Data Note:

NA = Data not available as district was not monitored in the year in which data is being reported.

District performance for this indicator is only for districts monitored in the year in which data is being reported. The OPI reviews a sample of student records as part of its compliance monitoring activities to determine if children referred by a Part C Service Provider Agency have an IEP in place at the age of three. A review of student records is to identify noncompliance issues with respect to 34 CFR 300.111 Child Find or 34 CFR 300.124 Transition of children from the Part C program to preschool programs.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 1196 Yellowstone Academy Elem

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 1196 Yellowstone Academy Elem

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 1196 Yellowstone Academy Elem

INDICATOR #3 - Statewide Assessments

Participation and performance of children with disabilities on statewide assessments:

3A. Has District met the state's AYP objectives for progress for disability subgroup?

3B. Participation rate for children with IEPs in statewide assessments.

3C. Proficiency rate for children with IEPs against grade-level standards and alternate achievement standards.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 3A	Assessment -- Meeting AYP Objectives			(%)			NA	Not Met
Indicator 3B	Assessment -- Participation Rates	124	103	0.83 (83%)	0.74665	0.89087	0.98 (98%)	Not Met
Indicator 3C	Assessment -- Proficiency Rates	124	20	0.16 (16%)	0.05844	0.37325	0.295 (29.5%)	Met

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 1196 Yellowstone Academy Elem

INDICATOR #4 - Suspension and Expulsion Rates

Districts who have been identified as having a significant discrepancy in long-term suspension and expulsion rates.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 4A	Suspension and Expulsion Rates	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

OPI School Discipline Data Collection reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The assessment of a school district's performance based on long-term suspension and expulsion rates is done by comparing the suspension and expulsion rates for students with disabilities to the long-term suspension and expulsion rates for nondisabled students. Long-term suspension or expulsion is defined as a suspension or expulsion that results in removal of a student, out-of-school, for greater than 10 school days or a student with multiple short-term (10 school days or less) out-of-school suspensions or expulsions that sum to greater than 10 school days during the school year.

For each racial/ethnic group, a statistical test of the difference between proportions is conducted to determine if the size of difference between the school district's special education long-term suspension and expulsion rates and the long-term suspension and expulsion rates for regular education students in the school district is statistically significant. In our comparison of long-term suspension and expulsion rates, we have set a .05 level of significance. This means, we are 95 percent confident that the differences between the rates are real (significant) and not due to random factors. However, the precision and reliability of this method is dependent upon having a large enough sample size to be representative of the school district's population and so, we also employ a minimum sample size (minimum N) of 10.

If the difference between the long-term suspension and expulsion rates for students with disabilities and the rates for nondisabled students by race/ethnicity group is statistically significant for a specific school district, the school district is flagged for additional investigation to determine if a significant discrepancy is occurring in the rates of long-term suspensions and expulsions of students with disabilities in a school year. This includes validation of the school district's long-term suspension and expulsion data and a systematic review of complaints/mediation/due process information, compliance monitoring and program data.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 1196 Yellowstone Academy Elem

INDICATOR #5 - Education Environment Rates

Percent of children with IEPs, aged 6-21,

5A. Removed from the regular class less than 21% of the school day.

5B. Removed from regular class greater than 60% of the day; or

5C. Served in public or private separate schools, residential placements, or homebound or hospital placements.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 5A	Education Environment Rate -- Reg Class > 80% of day	32	0	0 (0%)	0	0	0.5 (50%)	Not Met
Indicator 5B	Education Environment Rate -- Reg Class < 40% of day	32	0	0 (0%)	0	0	0.12 (12%)	Met
Indicator 5C	Education Environment Rate -- Sep Schls	32	32	1 (100%)	0.89284	1.00001	0.018 (1.8%)	Not Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 1196 Yellowstone Academy Elem

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

Indicator Data Source:

OPI Compliance Monitoring

Indicator Data Note:

NA = Data not available as district was not monitored in the year in which data is being reported.

District performance for this indicator is only for districts monitored in the year in which data is being reported. The OPI reviews a sample of student records as part of its compliance monitoring activities to determine if children referred by a Part C Service Provider Agency have an IEP in place at the age of three. A review of student records is to identify noncompliance issues with respect to 34 CFR 300.111 Child Find or 34 CFR 300.124 Transition of children from the Part C program to preschool programs.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0034 Zurich Elem

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0034 Zurich Elem

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

INDICATOR #3 - Statewide Assessments

Participation and performance of children with disabilities on statewide assessments:

3A. Has District met the state's AYP objectives for progress for disability subgroup?

3B. Participation rate for children with IEPs in statewide assessments.

3C. Proficiency rate for children with IEPs against grade-level standards and alternate achievement standards.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 3A	Assessment -- Meeting AYP Objectives	NA	NA	NA	NA	NA	NA	NA
Indicator 3B	Assessment -- Participation Rates	NA	NA	NA	NA	NA	NA	NA
Indicator 3C	Assessment -- Proficiency Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

INDICATOR #4 - Suspension and Expulsion Rates

Districts who have been identified as having a significant discrepancy in long-term suspension and expulsion rates.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 4A	Suspension and Expulsion Rates	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

OPI School Discipline Data Collection reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The assessment of a school district's performance based on long-term suspension and expulsion rates is done by comparing the suspension and expulsion rates for students with disabilities to the long-term suspension and expulsion rates for nondisabled students. Long-term suspension or expulsion is defined as a suspension or expulsion that results in removal of a student, out-of-school, for greater than 10 school days or a student with multiple short-term (10 school days or less) out-of-school suspensions or expulsions that sum to greater than 10 school days during the school year.

For each racial/ethnic group, a statistical test of the difference between proportions is conducted to determine if the size of difference between the school district's special education long-term suspension and expulsion rates and the long-term suspension and expulsion rates for regular education students in the school district is statistically significant. In our comparison of long-term suspension and expulsion rates, we have set a .05 level of significance. This means, we are 95 percent confident that the differences between the rates are real (significant) and not due to random factors. However, the precision and reliability of this method is dependent upon having a large enough sample size to be representative of the school district's population and so, we also employ a minimum sample size (minimum N) of 10.

If the difference between the long-term suspension and expulsion rates for students with disabilities and the rates for nondisabled students by race/ethnicity group is statistically significant for a specific school district, the school district is flagged for additional investigation to determine if a significant discrepancy is occurring in the rates of long-term suspensions and expulsions of students with disabilities in a school year. This includes validation of the school district's long-term suspension and expulsion data and a systematic review of complaints/mediation/due process information, compliance monitoring and program data.

INDICATOR #5 - Education Environment Rates

Percent of children with IEPs, aged 6-21,

5A. Removed from the regular class less than 21% of the school day.

5B. Removed from regular class greater than 60% of the day; or

5C. Served in public or private separate schools, residential placements, or homebound or hospital placements.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 5A	Education Environment Rate -- Reg Class > 80% of day	*	*	*	*	*	*	*
Indicator 5B	Education Environment Rate -- Reg Class < 40% of day	*	*	*	*	*	*	*
Indicator 5C	Education Environment Rate -- Sep Schls	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

0034 Zurich Elem

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0034 Zurich Elem

INDICATOR #12 - Children Referred By Part C

Percent of children referred by Part C, prior to age 3, who are found eligible for Part B, and who have an IEP developed and implemented by their third birthday.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 12	Children referred by Part C	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI Compliance Monitoring

Indicator Data Note:

NA = Data not available as district was not monitored in the year in which data is being reported.

District performance for this indicator is only for districts monitored in the year in which data is being reported. The OPI reviews a sample of student records as part of its compliance monitoring activities to determine if children referred by a Part C Service Provider Agency have an IEP in place at the age of three. A review of student records is to identify noncompliance issues with respect to 34 CFR 300.111 Child Find or 34 CFR 300.124 Transition of children from the Part C program to preschool programs.
